# GLPI plugins Documentation

Teclib'

мар. 12, 2024

<b>1</b>	<b>Presentation</b>	<b>3</b>
<b>2</b>	<b>Пустой</b>	<b>5</b>
2.1	Create a new plugin . . . . .	5
2.2	Update existing plugin . . . . .	6
2.3	Features . . . . .	6
<b>3</b>	<b>Пример</b>	<b>13</b>
<b>4</b>	<b>Centreon</b>	<b>15</b>
4.1	Requirements (on-premise) . . . . .	15
4.2	Features . . . . .	15
4.3	Installation . . . . .	16
4.4	Usage . . . . .	16
<b>5</b>	<b>Credit</b>	<b>19</b>
5.1	Requirements (on-premise) . . . . .	19
5.2	Install the plugin . . . . .	19
5.3	Setting up the plugin . . . . .	20
5.4	Counting credits . . . . .	22
5.5	Modify a credit on a ticket . . . . .	26
5.6	Including an expired credit . . . . .	27
5.7	Notification of expired credits . . . . .	27
5.8	FAQ . . . . .	28
<b>6</b>	<b>Datainjection</b>	<b>29</b>
6.1	Requirements (on-premise) . . . . .	29
6.2	Plugin installation . . . . .	29
6.3	Rights management . . . . .	30
6.4	Configuration . . . . .	30
6.5	Using a template . . . . .	34
6.6	Import result . . . . .	34
6.7	Complete the operation . . . . .	34
6.8	FAQ . . . . .	36
<b>7</b>	<b>Escalade</b>	<b>37</b>
7.1	Requirements (on-premise) . . . . .	37

7.2	Install the plugin . . . . .	37
7.3	Assign a ticket . . . . .	38
7.4	Set plugin parameters . . . . .	38
7.5	Ticket’s search engine . . . . .	42
7.6	Central page . . . . .	43
7.7	FAQ . . . . .	43
<b>8</b>	<b>Fields</b>	<b>45</b>
8.1	Requirements (on-premise) . . . . .	45
8.2	Features . . . . .	45
8.3	Install the Plugin . . . . .	46
8.4	Usage . . . . .	46
8.5	Search . . . . .	50
8.6	Simplified Interface . . . . .	50
8.7	Translations . . . . .	50
8.8	Entities . . . . .	51
8.9	FAQ . . . . .	51
<b>9</b>	<b>Form creator</b>	<b>53</b>
9.1	Features . . . . .	53
9.2	Install the Plugin . . . . .	54
9.3	Service catalog . . . . .	54
9.4	Forms configuration . . . . .	56
9.5	Targets . . . . .	71
9.6	Issues lifecycle . . . . .	76
9.7	Exporting and importing forms . . . . .	78
<b>10</b>	<b>Generic Object</b>	<b>81</b>
10.1	Requirements (on-premise) . . . . .	81
10.2	Возможности . . . . .	81
10.3	Пример применения . . . . .	82
10.4	Установить плагин . . . . .	82
10.5	Использование . . . . .	82
10.6	Добавить глобальные поля . . . . .	88
10.7	Setup Rights . . . . .	88
10.8	Use the new field . . . . .	88
10.9	Use case of Generic Object as a CMMS . . . . .	88
10.10	FAQ . . . . .	92
<b>11</b>	<b>News</b>	<b>93</b>
11.1	Requirements (on-premise) . . . . .	93
11.2	Features . . . . .	93
11.3	Install the Plugin . . . . .	94
11.4	Usage . . . . .	94
11.5	Create alerts . . . . .	94
11.6	Targets . . . . .	95
11.7	Display on login page . . . . .	96
11.8	Display on helpdesk page . . . . .	96
11.9	FAQ . . . . .	96
<b>12</b>	<b>OAuth IMAP</b>	<b>97</b>
12.1	Requirements (on-premise) . . . . .	97
12.2	Supported mail services . . . . .	98
12.3	Install the plugin . . . . .	98
12.4	Register your Entra application . . . . .	98

12.5	Setup GLPI . . . . .	100
12.6	FAQ . . . . .	101
<b>13</b>	<b>Order</b>	<b>103</b>
13.1	Requirements (on-premise) . . . . .	103
13.2	Features . . . . .	103
13.3	Install the Plugin . . . . .	104
13.4	Configuration . . . . .	104
13.5	Creation of a reference catalogue . . . . .	106
13.6	Creating an order . . . . .	107

34.4	Display notifications . . . . .	292
34.5	FAQ . . . . .	294

You'll find here user documentation for various [GLPI plugins](#).

Plugins are a way to extend [GLPI](#) possibilities without modifying core source code. In a perfect world, plugins should provide specific features; while core's may provide features everyone (or almost!) may find useful.

Some of the existing plugins are very complex, other are very simple. Some may require you to read their documentation before using, some do not. . . . Some may provide you configuration possibilities, access rights management, and so on. . . . Or not! There are so many plugins already!

If you're looking for a feature that does not exist yet in GLPI's core, take a look at the [plugins repository](#). You can search for a plugin name or a feature, see what core's versions are compatible, and so on.

The goal of the present documentation is to centralize documentations, but we cannot pretend all plugins documentations are hosted here.

Anyways, happy GLPI-ing!

Download	Sources
<i>not relevant</i>	<a href="https://github.com/pluginsGLPI/empty">https://github.com/pluginsGLPI/empty</a>

Это плагин делает ничего. На самом деле!

This is designed to be a start point for writing plugins, with very minimal defaults usefull scripts, and some advices. If you're looking for plugins possibilities, take a look at *the example plugin*.

## 2.1 Create a new plugin

An utility script to create a new plugin - `plugin.sh` is provided. You will call it with a plugin name, a version, an optionally the path where you want it to be created:

```
$ ./plugin.sh MyGreatPlugin 0.0.1
```

The script will sanityze and lowercase the name you provided, copy the templates files into the new directory, and then make some replacements.

Using the script without destination parameter, it will create you directory `plugin`, `mygreatplugin` just beside its own directory. Otherwise, it would create the new directory in the specified path:

```
$ ./plugin.sh MyGreatPlugin 0.0.1 /path/to/glpi/plugins/
```

## 2.2 Update existing plugin

There is no automated way to update an existing plugin, because there would be too many cases to handle. But don't worry, procedure is quite simple ;)

Using empty features is as simple as creating a few files:

- `composer.json`,
- `.travis.yml`,
- `Robofile.php`,
- `.gitignore`.

If you do not have yet any composer or travis configuration file, you can just copy the ones from empty plugin. Otherwise; in you `composer.json`, just add:

```
{
  "minimum-stability": "dev",
  "prefer-stable": true
}
```

And then run `composer require glpi-project/tools`.

In the travis configuration file, just add the CS call:

```
script:
  - vendor/bin/robo --no-interaction code:cs
```

In the `.gitignore` file, add the following:

```
dist/
vendor/
.gh_token
*.min.*
```

As for the Robo.li configuration file, note that the one embed in the empty plugin is a bit specific, you'll have to edit it in order to get things working. See below for more informations.

Finally, as the `tools` project will provide you some features, you can remove duplicated tools scripts (files such as `release`, `extract_template.sh`, ...) that would be present in your plugin.

## 2.3 Features

### 2.3.1 Coding standards

The GLPI `PHPCodeSniffer` rulesets are provided as `vendor/glpi-project/coding-standard/GlpiStandard/`.

To check coding standards, just use the Robo.li task `code:cs`:

```
$ ./vendor/bin/robo code:cs
```

---

**Примечание:** The above command will ignore `vendor` and run on the current directory.

If you want to adapt ignore list or checked directories, you can just override `$csignore` and/or `$csfiles` in the `RoboFile.php` of the plugin:

```
<?php
class RoboFile extends Glpi\Tools\RoboFile
{
    protected $csignore = ['/vendor/', '/lib/'];
    protected $csfiles  = ['./', 'setup.php.tpl']
    [...]
}
```

### 2.3.2 Automated checks

For convenience; a `.travis.yml` file is also provided, that is setup to:

- check coding standards,
- run on a bunch on different configuration

You still have to enable travis-ci builds from the website in order to activate automated tests.

Of course, the `.travis.yml` file can be pimped; you can run unit tests, create/update a database, activate notifications, and so on. Refer to the [Travis-CI documentation](#) to know more.

### 2.3.3 Minifying CSS and JS

**Предупреждение:** Disabled as of 0.1.13, because libs used from Robo are out of date and cannot be replaced.

A convenient script, using `Robo.li` is provided. The `RoboFile.php` file is an empty class that extends `Glpi\Tools\RoboFile` (provided by `glpi-project/tools` dependency) in which you can set your own stuff.

That way, you can quite easily update the common file and get your own tasks remaining the same.

To get the required libs installed, you'll have to [get composer installed](#) and then run:

```
$ composer install -o
```

There are three available targets:

- `minify` that will minify all CSS and JS files (see below),
- `minify:css` that will minify all css stylesheets files in the `css` directory of your plugin, creating a `.min.css` version along with the original file,
- `minify:js` that will minify all javascript files in the `js` directory of your plugin, creating a `.min.js` version along with the original file.

Just choose a target, and run something like:

```
$ ./vendor/bin/robo minify:css
```

**Примечание:** Remember compiled files should not be committed on your repository sources. It is a release process to minify files.

Also remember to adapt your scripts so they load your minified versions if available, and the original one otherwise :)

As of GLPI 9.2; you do not have to care about loading minified files when using `add_css` and `add_javascript` hooks! You just need to call not minified script; and GLPI will use the minified version if it exists and if not in *DEBUG* mode.

---

### 2.3.4 Translations

GLPI and its plugins use gettext for internationalization. Several steps are required before that can work:

1 translatable strings must be extracted from source files, a POT file will be created or updated accordingly, 2 PO files must be created or updated from the POT file, 3 PO files must be translated, 4 MO files must be compiled from the latest PO.

In the `vendor/bin` directory, you'll find a `extract_template.sh` script. This is designed to extract translatable strings from your source code (see first point above).

Once it has been ran, a `locale/mygreatplugin.pot` file will be created/updated.

For the second and third step, you'll have to make a choice. You can use gettext tools to update your PO files and translate them using a dedicated tool, like `poedit`; or you can use an online translation system like `Transifex` or `Zanata`. GLPI core and many of existing plugins are translated using Transifex right now.

Once you get your updated PO files, you'll have to compile them to MO files. You can run it manually, the release script will compile them again anyways; see the *compiling MO files section*.

### 2.3.5 Release script

A release script is provided in `vendor/bin/plugin-release`. This is a «simple» Python script; you should just have Python installed on your system (this is installed by default on most linux distributions).

**Предупреждение:** Note that the release script is only compatible if you use semantic versioning!

Using just the defaults, the script will try to retrieve the latest tag in your git repository, add third party dependencies and create a *Release* on the github project:

```
$ ./vendor/bin/plugin-release
Do you want to build version 1.9.5? [Yes/no] y
Building glpi-order-1.9.5...
Archiving GIT tag 1.9.5
Adding vendor libraries
$ ls dist
glpi-order-1.9.5.tar.bz2  glpi-order-1.9.5.tar.bz2.asc
```

## Requirements

You will need a python interpreter installed as well as the following modules:

- `termcolor`,
- `gitdb`,
- `github` (to check for existing versions in also in drafts, and to create github releases), unless you use the `--nogithub` option

If you want to get help on the script, try to run `./vendor/bin/plugin-release -h`.

## Process

The release process will achieve the following tasks for you:

- check if the version constant is the same as the tag you've requested;
- check if the version in the website XML file is the same as the tag you've requested;
- check if a release already exists, locally, and remotely (assuming your project is hosted in the `pluginsGLPI` organization and the release is public);
- make a *git archive* of the paths that are not excluded (`.git`, `tools`, `tests`, ...);
- if any, install composer dependencies;
- if any, compile you MO files;
- if any, compile you CSS stylesheets and your Javascript files (using `Robo.li`);
- create a release archive with all that; that will be available in the `dist` directory;
- use GPG to sign the archive.

---

**Примечание:** The standard release process will not work on your files directly, it will make a copy in the `dist/src` directory before. The only exception is the *MO compiling option*.

---

In order to check if all is OK before doing real release; create your tag and run `./vendor/bin/plugin-release -C` **before pushing your tag**. That way, you'll be able to fix potential issues and re-create your tag locally (remember published tags should **never** be removed).

## Compiling MO files

The release process will automatically compile every PO file it will found in your `locales` directory. But you probably want the sources to contain the latests MO files, for testing purposes. The release script provide the `--compile-mo` (or `-m`) to achieve that:

```
$ ./vendor/bin/plugin-release --compile-mo
```

**Предупреждение:** The above command will work on your plugins files directly; not on a copy as does other commands.

### Pre-releases

Per default, the release script will work only on existing tags. Any pre-release should have its own tag; but you may want to create a release archive without any tags in some circumstances.

In order to tell the release script what it should archive, you'll have to specify several parameters:

- `--commit` (or `-c`) giving the commit hash,
- `--release` (or `-r`) giving the release version (usually, it will be the next release version),
- `--extra` (or `-e`) to specify an extra string (such as *alpha*, *beta*, *rc1*, etc...)

As an example with the *order* plugin:

```
$ ./vendor/bin/plugin-release --commit 632d515d4ac0 --release 1.9.5 --extra alpha1
$ ls dist
glpi-order-1.9.5-alpha1-20161103-632d515d4a.tar.bz2
```

### Signing releases

Signing releases with a GPG key would permit users to check download integrity before installing. You'll need a GPG key publically available to users; the sign option is activated per default, you can deactivate using the `--nosign` (or `-S`) option.

A file containing the signature with the same name as the archive with a `.asc` extension will be created in the `dist` directory.

### GitHub release

The release script will create a release on your GitHub repository, as a draft, unless you use `--nogithub` (or `-g`) option.

---

**Примечание:** Unfortunately, I was not able to get the newly created archive uploaded to this new release... Maybe that could be fixed in the future.

---

In order to use this feature, you will need the `github` installed; and you will need an access token. Access token is valid per user, and gives access to all his repositories.

You'll have to go to your `github` account settings page, in the `personnal access token` tab. Click on *generate new token*, give the description you want, and make sure you'll check the *public\_repo* box only (no need to check anything else, you can create several access token if you need).

The token will be displayed only once; store it in the `.gh_token` file in your plugin directory; and that's all!

## Excluding files

You can create a `.ignore-release` file at the root of your plugin and list here files and directories you want to explicitly exclude from the release archive. Write one `expression` per line

```
.+\.png  
screenshots/
```

Some files will automatically be excluded:

- `.git*`,
- `.gh_token`
- `.tx/`
- `tools/`
- `tests/`
- `.atoum.php`
- `.travis.yml`
- `.circleci/`
- `.ignore-release`
- `composer.lock`
- `Robofile.php`

Download	Sources
<i>not relevant</i>	<a href="https://github.com/pluginsGLPI/example">https://github.com/pluginsGLPI/example</a>

An example plugin... This is designed to show you various possibilities that are offered to plugins from GLPI core.

As this plugin does nothing in reality, there is no documentation for it. You would like to refer to *plugins presentation*, *plugins developer manual* or even *empty plugin* to get started.

Download	Sources
<a href="https://github.com/pluginsGLPI/centreon/releases">https://github.com/pluginsGLPI/centreon/releases</a>	<a href="https://github.com/pluginsGLPI/centreon">https://github.com/pluginsGLPI/centreon</a>

## 4.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 4.2 Features

Centreon is a network, system, applicative supervision and monitoring tool. Centreon plugin allows you to see general information about hosts and their services on your GLPI interface, as long as the items are both in GLPI and Centreon.

You can perform 3 main actions :

- Acknowledge a problem
- Schedule a downtime
- Trigger a host check,

and you can also see the timeline of the host.

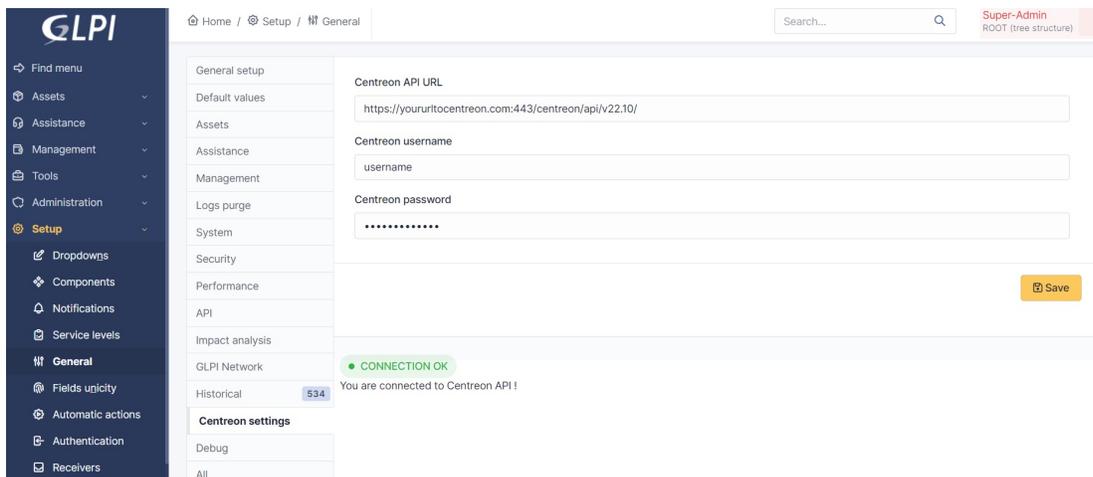

## 4.3 Installation

- Uncompress the archive
- Move the `centreon` folder to `<GLPI_ROOT>/plugins` directory
- Navigate to the **Configuration > Plugins** page,
- Install and activate the plugin.

## 4.4 Usage

You need to configure the plugin before using it. To do so, go to the **Setup > Plugins > Centreon** page. You will need to fill the following fields :

- **Centreon URL** : The URL of your Centreon interface, following by the number of the port, and the API version to use
- **Centreon Username** : The username of your Centreon account
- **Centreon Password** : The password of your Centreon account

The screenshot shows the GLPI interface for configuring the Centreon plugin. The left sidebar contains a navigation menu with 'Setup' highlighted. The main content area is titled 'General setup' and includes a 'Centreon settings' section with the following fields:

- Centreon API URL**: `https://yoururtocentreon.com:443/centreon/api/v22.10/`
- Centreon username**: `username`
- Centreon password**: `*****`

A 'Save' button is located at the bottom right of the settings section. Below the settings, a green notification box displays 'CONNECTION OK' and 'You are connected to Centreon API !'. The top of the page shows the user 'Super-Admin ROOT (tree structure)' and a search bar.

Then, it will create automatically a new SQL table named `glpi_plugin_centreon_hosts`. This table will contain all the hosts that are both in GLPI and Centreon. A new tab is created on the host page, so you can see the information about the host.

Download	Sources
<a href="https://github.com/pluginsGLPI/credit/releases">https://github.com/pluginsGLPI/credit/releases</a>	<a href="https://github.com/pluginsGLPI/credit">https://github.com/pluginsGLPI/credit</a>

## 5.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

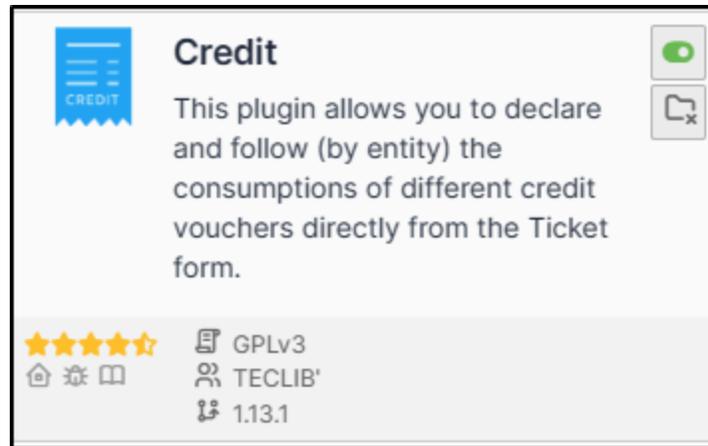

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 5.2 Install the plugin

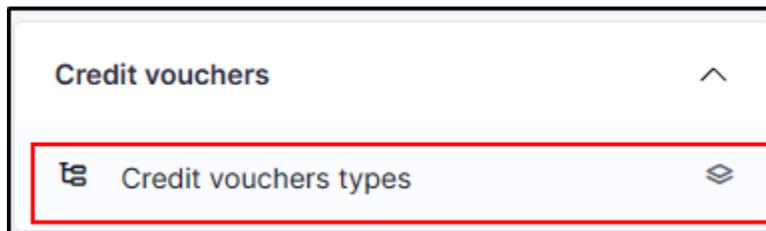

- Go to the marketplace. Download and install the plugin “**Credit**”.

## 5.3 Setting up the plugin

### 5.3.1 Creating a credit type

- From **Setup > Dropdowns**,
- click on **Credits** then **Credit types**.

- Click on **add**.
- Enter a name representing the type of credit granted

Actions	
COMPLETE NAME ^	ENTITY
<input type="checkbox"/> Client1	Entité racine
<input type="checkbox"/> Client1 > Followup	Entité racine
<input type="checkbox"/> Client1 > Solution	Entité racine
<input type="checkbox"/> Client1 > Task	Entité racine

20 rows / page Showing 1 to 4 of 4 rows

### 5.3.2 Add credit to customer entity(ies)

Example : We will create 3 types of credit:

- For a new follow-up
- For a new task
- For a new solution

You can create a single type of credit which will group together the 3, it depends on the management of each case.

- In **Administration** > **Entities**, select the entity that will receive the credits.
- Go to the **Credit** section
- In the section **Add a credit**, enter a name for the new credit
- Define the type of credit created earlier
- The start and end dates of the credit
- Activate it,
- Make it available or not in the child entities (note that if you are in the parent entity, it will be accessible to all entities)
- The quantity of credit sold
- The authorisation to overconsume or not
- Click on **add**

The screenshot shows the 'Entity - Client 1' configuration page. The left sidebar contains a menu with 'Credit vouchers' highlighted. The main content area is divided into two sections:

- Default options for entity:** This section contains three columns of settings:
  - 'By default consume a voucher for followups' (No)
  - 'By default consume a voucher for tasks' (No)
  - 'By default consume a voucher for solutions' (No)
  - 'Default for followups' (-----)
  - 'Default for tasks' (-----)
  - 'Default for solutions' (-----)
 An 'Update' button is located below these settings.
- Add a credit voucher:** This section is highlighted with a red box and contains the following form fields:
  - Name\*: New Followup
  - Type: Client1 > Followup
  - Start date: 01-12-2023
  - Active: Yes
  - Child entities: Yes
  - Quantity sold: 10
  - Allow overconsumption: No
  - End date: 31-12-2023
 An 'Add' button is located below the form fields.

Below the form, the text 'No credit voucher' is displayed.

Here, we'll do the same for the 3 types of credit (followup, task and solution)

It is therefore possible to enter different values (number of credits, validity, overconsumption, etc.) for each credit:

<input type="checkbox"/> Name	Type	Active	Start date	End date	Quantity sold	Quantity consumed	Quantity remaining	Allow overconsumption	Entity	Child entities
<input type="checkbox"/> New solution	Client1 > Solution	Yes	01-08-2023	31-12-2023	15		15	No	Entité racine > Client 1	Yes
<input type="checkbox"/> New task	Client1 > Task	Yes	01-11-2023	31-12-2023	5		5	No	Entité racine > Client 1	Yes
<input type="checkbox"/> New Followup	Client1 > Followup	Yes	01-12-2023	31-12-2023	10		10	No	Entité racine > Client 1	Yes

### 5.3.3 Define default values

- In **Administration > Entities**, select the entity that will receive the credits
- Go to the **Credit** section
- In the **Default options for entity** section
- Select the type of credit by action

**Default options for entity**

By default consume a voucher for followups  By default consume a voucher for tasks  By default consume a voucher for solutions

Default for followups  Default for tasks  Default for solutions

- Click on **Update**

**Предупреждение:** «Caution Indicating credit types does not allow automatic settlement. It pre-selects the credit but it must be settled by the technician.

## 5.4 Counting credits

When a ticket is created, you can choose whether or not to deduct the corresponding credits.

In our example, we have chosen to deduct each action.

- If we are doing a **follow-up**, we can deduct the credit assigned by default:
- The same for a **task**:
- And for a **solution** :

In the **Credit** section of the ticket you can see a summary of credits spent and remaining

The screenshot displays a web interface for editing a message and configuring a voucher. The message editor includes a rich text toolbar with options for Paragraph, Bold (B), Italic (I), Underline (A), and a color picker. The message content is: "Hello Joe, your request has been processed and we will get back to you as soon as possible to carry out an intervention on your workstation. Best regards Your IT Team". Below the editor is a file upload area with a 20 Mio limit and a "Choisir des fichiers" button. The voucher configuration section includes a "Credit vouchers" header, a "Consume a voucher?" dropdown set to "Yes", a "Voucher name" dropdown set to "New Followup", and a "Quantity consumed" dropdown set to "1", which is highlighted with a red box. At the bottom, there is a "+ Add" button and a toggle switch.

Paragraph **B** *I* A

Hello Joe,  
your request has been processed and we will get back to you as soon as possible to carry out an intervention on your workstation.  
Best regards  
Your IT Team

File(s) (20 Mio max)

Drag and drop your file here, or

Choisir des fichiers | Aucun fichier n'a été sélectionné

Credit vouchers  
Consume a voucher ?  
Yes

Voucher name  
New Followup

Quantity consumed  
1

+ Add

The screenshot shows a task creation form in GLPI. At the top left is a rich text editor with a toolbar containing options for Paragraph, Bold (B), Italic (I), Underline (A), and a link icon. The text area contains "Intervention at John's workstation" with "workstation" underlined in red. Below the editor is a file upload area labeled "File(s) (20 Mio max)" with a dashed border and the text "Drag and drop your file here, or". It contains two buttons: "Choisir des fichiers" and "Aucun fichier n'a été sélectionné".

On the right side, there is a vertical sidebar of controls: a dropdown menu, a calendar icon, another dropdown menu, a "To do" button, a lock icon with a toggle switch, another calendar icon with a toggle switch, a dropdown menu, a user selection dropdown (currently showing "Admin"), and another dropdown menu.

Below the sidebar, there are fields for "Start date" (08-12-2023 10:55:0), "Period" (1h00), and "Reminder" (None). At the bottom left, there is a "Credit vouchers" section with a "Consume a voucher?" dropdown (set to "Yes"). A red box highlights the "Voucher name" dropdown (set to "New task") and the "Quantity consumed" dropdown (set to "1"). At the bottom center, there is a "+ Add" button and a toggle switch.

The screenshot displays a GLPI ticket form with a light blue background. At the top right, there is a close button (X). Below it is a search bar with a magnifying glass icon. The main content area is divided into several sections:

- Message Body:** A rich text editor with a toolbar containing options for Paragraph, Bold (B), Italic (I), Text Color (A), and a link icon. The text reads: "John, Your incident is now resolved. You can reopen this ticket if you need to. Best regards, Your IT Team".
- File Upload:** A section titled "File(s) (20 Mio max)" with a sub-header "Drag and drop your file here, or". It contains two buttons: "Choisir des fichiers" and "Aucun fichier n'a été sélectionné".
- Voucher Selection:** A section titled "Credit vouchers" with a sub-header "Consume a voucher?". It includes a "Yes" dropdown menu, a "Voucher name" dropdown menu (highlighted with a red box) currently showing "New Followup", and a "Quantity consumed" dropdown menu currently showing "1".
- Action:** A yellow "+ Add" button at the bottom left.

Consumed credits for this ticket										
<input type="button" value="⚙ Actions"/>										
<input type="checkbox"/>	Voucher name	Voucher type	Date consumed	User consumed	Quantity consumed					
<input type="checkbox"/>	New Followup	Client1 > Followup	08-12-2023	Admin	1

## 5.5 Modify a credit on a ticket

### 5.5.1 Increase or decrease a granted credit

You can modify credits on a ticket if a readjustment is necessary.

- From the ticket in question, go to the **credit** section
- Select the credit you wish to adjust
- Click on **Actions**
- Click on **Update**
- Click on **Quantity consumed** then add the desired quantity
- Click on **Send**

**Примечание:**

See how to proceed

## 5.5.2 Delete deducted credits

- From the ticket in question, go to the **Credit** section
- Select the credit you wish to delete
- Click on **Actions**
- Click on **Delete permanently**
- Click on **Send**

### Примечание:

See how to proceed

Credits will be automatically reallocated in the credit bank

## 5.6 Including an expired credit

If the credit has expired, it will not be proposed in the list of available credits. You will not be able to deduct it. You will need to change the end date of the credit to be able to use it again.

## 5.7 Notification of expired credits

An automatic action is available to notify you when a credit has expired.

- From **Setup > Automatic actions**, modify the **creditexpired** action to suit your needs.
- Click on **Save**

The screenshot shows the configuration page for the 'Automatic action - creditexpired'. The interface includes a sidebar on the left with navigation options: 'Automatic action', 'Statistics', 'Logs' (39), 'Historical' (1), and 'All'. The main content area is divided into two columns. The left column contains configuration fields: 'Name' (Credit - creditexpired), 'Description', 'Run frequency' (Each day), 'Status' (Scheduled), 'Run mode' (CLI), 'Run period' (0 to 24), 'Number of days this action logs are stored' (30), and 'Notice (in days)'. The right column contains a 'Comments' text area, 'Last run' (Never), and 'Next run' (As soon as possible). There are 'Execute' and 'Save' buttons at the bottom right.

You can of course customise the notification to suit your needs (**Setup > Notifications > Notifications > credit expired**)

## 5.8 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

Download	Sources
<a href="https://github.com/pluginsGLPI/datainjection/releases">https://github.com/pluginsGLPI/datainjection/releases</a>	<a href="https://github.com/pluginsGLPI/datainjection">https://github.com/pluginsGLPI/datainjection</a>

## 6.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

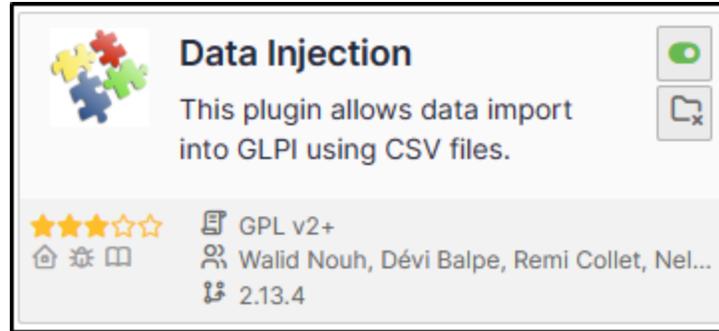

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 6.2 Plugin installation

- Go to the marketplace. Download and install the plugin **Data Injection**

## 6.3 Rights management

Once the plugin has been installed via the marketplace, you can configure rights according to profile:

- From **Administration** > **Profiles**, select the profile in question
- Go to **Data injection**

For each user profile, you can grant the following rights:

- **Model management** : Read / Update / Create / Purge
- **Import file** : Read

## 6.4 Configuration

You can find the plugin configuration at **Tools** > **Data injection**. The extension is presented in the form of a wizard, each operation is broken down into steps and it is possible to return to the previous step to correct a choice.

### 6.4.1 Managing or using a model

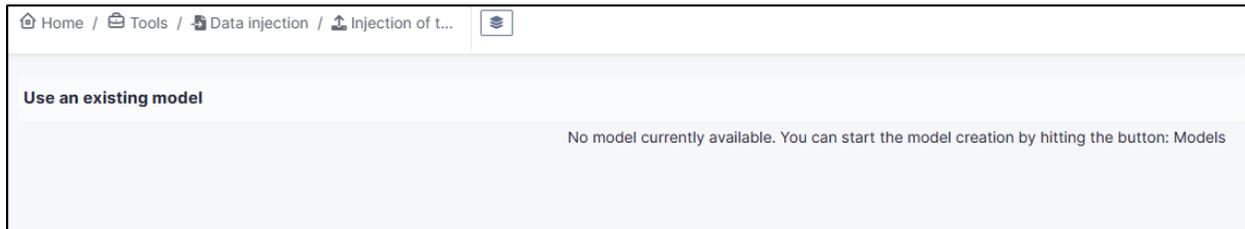

The first step allows you to choose the operation to be carried out, depending on your rights.

- Use an existing template in the drop-down menu
- Manage templates to :
  - Create a new template
  - Modify an existing template
  - Delete an existing template
  - Use an existing template

## 6.4.2 Creating a template

The first step is to create a template if none exists.

- From **Tools > Data injection**
- Click on **Template**
- Click on **Add**

### Defining the model

This step allows you to define the main options for the extension:

- **Name:** the name that will be visible from the drop-down list
- **Visibility:** defines whether it will be visible to other users or not
- **Entity** and **sub-entity:** the template can be visible in the creation entity only (sub-entity set to no) or in the entity and all sub-entity (sub-entity set to yes).
- **Comment:** a comment for the template.
- **Type of data to import:** the type of data present in the file to be imported. A file only consists of data of the same type.
- **Allow lines creation:** tells the plugin to create objects if the line does not correspond to an existing element in the database.
- **Allow update rows:** tells the plugin to modify existing objects using the data in the file.
- **Header's presence:** tells the plugin whether the headings present in the file (location, type of equipment, models, etc.) should be created. Creation will also be limited by the rights of the template user.
- **Update existing fields:** the extension whether the data in the file can replace fields already filled in.
- **Date format:** the date format is contained in the CSV file. If the format is incorrect, the date cannot be imported.
- **Decimal number format:** the format used for the numbers in the CSV file. If the format is incorrect, the numbers cannot be imported.

**After validation of the model,** the following fields are added:

- **Presence of a header:** indicates whether the first line of the CSV file is a header line, so that you can see the contents of the columns to identify the contents of the columns
- **File delimiter:** field separator (by default a semicolon)

## File to be injected

- From the **File to inject** tab, you need to choose a file on your computer with exactly the same structure as the data already imported.
- Then define the **encoding** (ISO8859-1 for Windows files, UTF-8 for Linux files. Automatic detection can be used to determine the encoding, but will slow down file processing. We strongly recommend that you always work in UTF-8.)

Once the file has been validated, you will be taken to the **Mappings** tab

## Mappings

This stage is essential. It defines, for each column in the file, the corresponding field in the database. The columns are identified by the content of the header line (presence defined in the previous step) or by their position (starting from 0). A separator error (in the previous step) will result in an incorrect split. The **View file** button is used to preview the first lines of the file and check their content and the interpretation made by the plugin.

For each column, you can choose

- **Do not retrieve data from this column** (leave the **Choose a table** option)
- **Choose a table**: the data type defined in step 2 or the financial information
- **Choose a field**: which will be populated by the import
- **Link field**: to indicate that this column will be used to check the existence of the data in the database and to choose between creating a new object or update. Candidate fields are, for example, the **Serial number**, the **Name** or the **Inventory number**

**Предупреждение:** It is mandatory to define at least 1 linking field. If a field is checked, it must be entered in your **csv** file used for importing.

Header of the file	Tables	Fields	Link field
Name	Computers	Name	<input type="checkbox"/>
Entity	Computers	Child entities	<input type="checkbox"/>
Status	Computers	Status (Status of items)	<input type="checkbox"/>
Manufacturer	Computers	Manufacturer	<input type="checkbox"/>
Serial number	Computers	Serial number	<input checked="" type="checkbox"/>
Type	Computers	Type (Computer type)	<input type="checkbox"/>
Model	Computers	Model (Computer model)	<input type="checkbox"/>
Operating System - Name	Item operating systems	Name (Operating system)	<input type="checkbox"/>
Location	Computers	Location	<input type="checkbox"/>
Components - Processor	Computers	Processor	<input type="checkbox"/>
Agent - Last contact	-----Choose a table-----	-----Choose a field-----	<input type="checkbox"/>
User	Computers	User	<input type="checkbox"/>

**Примечание:** It is possible to define **Comments** or **Notes** as the destination for several columns in the file. Each column will be added to the field on a different line. This step is particularly important and a wrong choice could damage the inventory data. It is therefore advisable to test the import on a test database or to and reserve this function for advanced users.

### 6.4.3 Additional information

This step is used to define the fields that can/should be populated by the user when a file is injected. For each field, the same value will be used for each line of the file and will take precedence over the contents of the file.

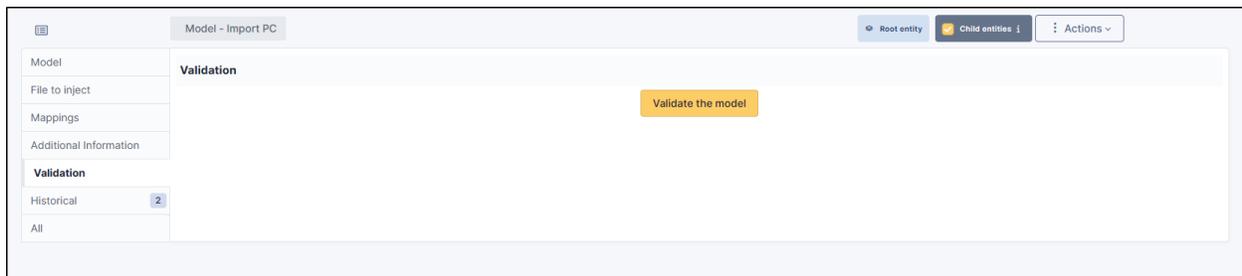

- **Table:** the data type defined in step **Matching**
- **Field:** will be populated by the import
- **Mandatory information:** whether model user input is mandatory or optional

Example of use :

- Purchase date when importing a delivery note
- Comments to define a criterion that can be used in the search engine (e.g. IMPORT ON 31/10)

#### Model validation

From the Validation tab, you can confirm the registration. It is still possible to return to the previous steps to check and correct certain options.

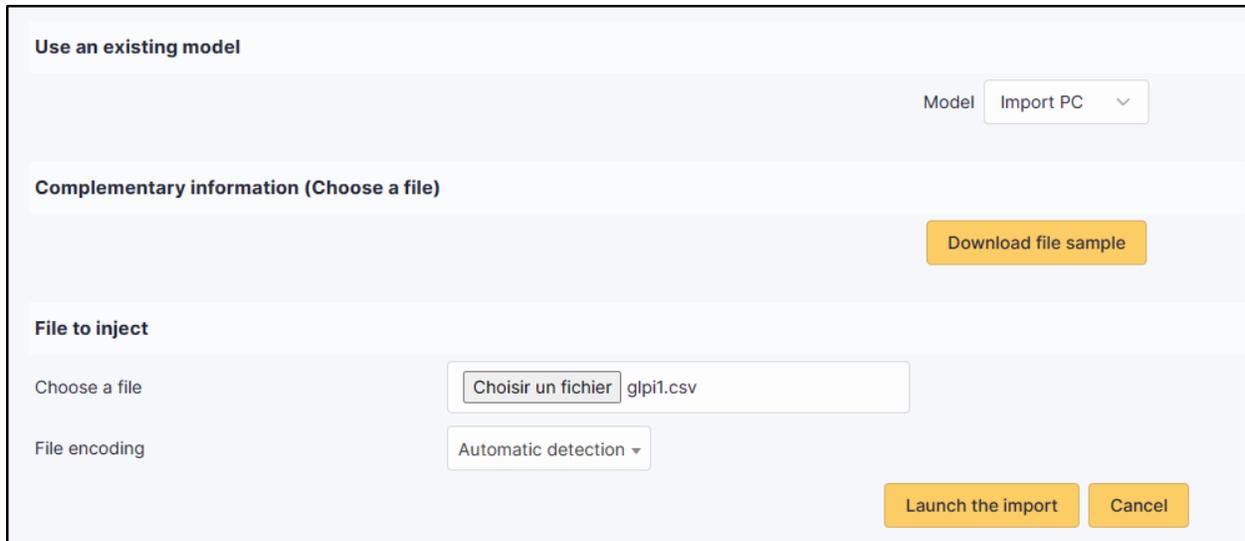

**Предупреждение:** If you are working with a sub-entity, you must select the desired entity before importing.

**Примечание:** Some fields in your CSV file will need to be filled in as Booleans. This is the case, for example, with double-choice fields, such as: “Ports” (serial/parallel/USB) for printers. Instead of entering **Yes** | **No** in your CSV, enter **1** | **0** as appropriate. If these values are not changed, you will see an error in the report indicating that the wrong type of data has been entered.

## 6.5 Using a template

### 6.5.1 Choosing a template

- From **Tools > Data injection**, select the template you require from the drop-down list
- Then enter the path to the CSV file to be injected
- Specify the **Encoding** of the file if you know it. If not, leave on **Automatic detection**
- Click on **Proceed with import**

**Use an existing model**

Model

**Complementary information (Choose a file)**

[Download file sample](#)

**File to inject**

Choose a file

File encoding

[Launch the import](#) [Cancel](#)

### Confirmation before import

A popup will ask you to confirm or not the import of the selected file.

## 6.6 Import result

From this last stage, by clicking on the coloured circle, you can view a report on the import and, in particular, locate any errors

## 6.7 Complete the operation

A popup window will ask you whether or not you want to confirm the import of the selected file. Once the progress bar is full, click on **Finish**

Data injection report - GLPI - Profil 1 - Microsoft Edge  
 https://[redacted]glpi-network.cloud/marketplace/datainjection/front/popup.php?popup=log&models\_id=4

## 6.8 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

Download	Sources
<a href="https://github.com/pluginsGLPI/escalade/releases">https://github.com/pluginsGLPI/escalade/releases</a>	<a href="https://github.com/pluginsGLPI/escalade">https://github.com/pluginsGLPI/escalade</a>

## 7.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 7.2 Install the plugin

- Go to the marketplace. Download and install the plugin **Escalade**.

## 7.3 Assign a ticket

**Совет:** Escalade vs business rules We advise you **to use business rules** to allocate tickets or escalations. This allows you to manage more flexibly when changing category, urgency, etc.

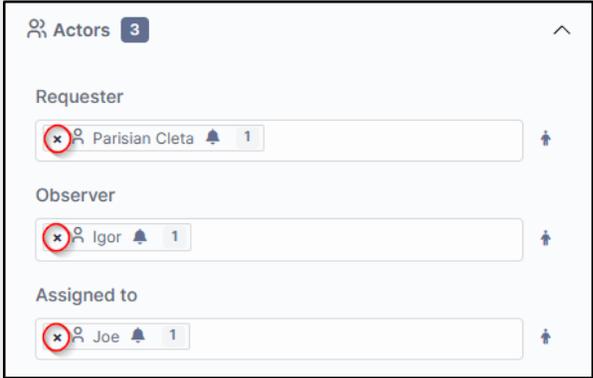

**Примечание:** Escalade allows tickets **to be escalated only to groups**, and not to live users.

When the plugin is activated, a new option is available from the ticket interface :

## 7.4 Set plugin parameters

- From the plugin, click on the spanner and choose the various options that interest you:

Action	Effect
<p><b>Remove old assign group on new group assign</b>  <b>show group assign history visually</b></p>	<p>Deletes or not the existing groups when you assign a new one</p> <p><i>(valid only if previous option is set to yes)</i> Previous groups will be visible when a new group is escalated</p> 
<p><b>Assign ticket to initial group on solve ticket</b></p>	<p><i>(valid only if previous option is set to yes)</i> Reassigns ticket to initial group if a group is deleted</p>
<p><b>Escalation history in tasks</b></p>	<p>Keep or not the history of escalations in the tasks</p>
<p><b>Remove technician(s) on escalation</b></p>	<p>Technician(s) will be deleted when a new technician is added to the ticket</p>
<p><b>Ticket status can be changed after escalation</b></p>	<p>Modify the status of the ticket after the escalation. A “do not modify” option is also available.</p>
<p><b>Assign the technical manager on ticket category change</b></p>	<p>If a technical manager is declared in an ITIL category, they will be automatically assigned and will receive a notification.</p>
<p><b>Assign the technical group on ticket category change</b></p>	<p>If a technical group is declared for an ITIL category, it will be automatically assigned and the members of the group will receive a notification</p>
<p><b>Clone tickets</b></p>	<p>Possibility of cloning tickets from the helpdesk interface .. figure:: images/Escalade-4.png</p>
<p><b>Close cloned tickets at the same time</b></p>	<p>Close all cloned tickets when one of them is closed</p>
<p><b>Use the technician’s group</b></p>	<p>If a technician is assigned, their group will also be assigned. You can choose to take account of the assignment when the ticket is created and/or modified. You can also choose to select the first or last group to which the user is assigned</p>
<p><b>Remove requester(s) on escalation</b></p>	<p>Remove requester(s) in the event of an escalation. Please note that no history is kept, as is the case for assigning a group</p>
<p><b>Display delete button</b></p>	<p>Displays the option of deleting actors from the ticket (ability to refine which user/group/supplier by requestor/watcher/technician)</p> 
<p><b>Activate filtering on allocation groups</b></p>	<p>Enables filtering and whether or not escalation to other groups is possible. <i>See next chapter for more information</i></p>

### 7.4.1 Setting up filtering

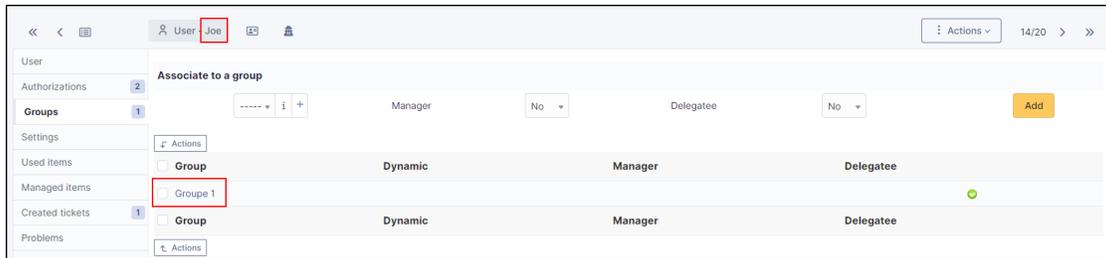

Filtering allows you to define which group is able to escalate tickets to other groups. For example, we don't want N1 support to be able to escalate to N3 directly. The escalation to N2 must be mandatory.

- From **Administration** > **Groups**, select one of the groups
- In **Escalade**, add the groups to which this one will be able to escalate tickets.

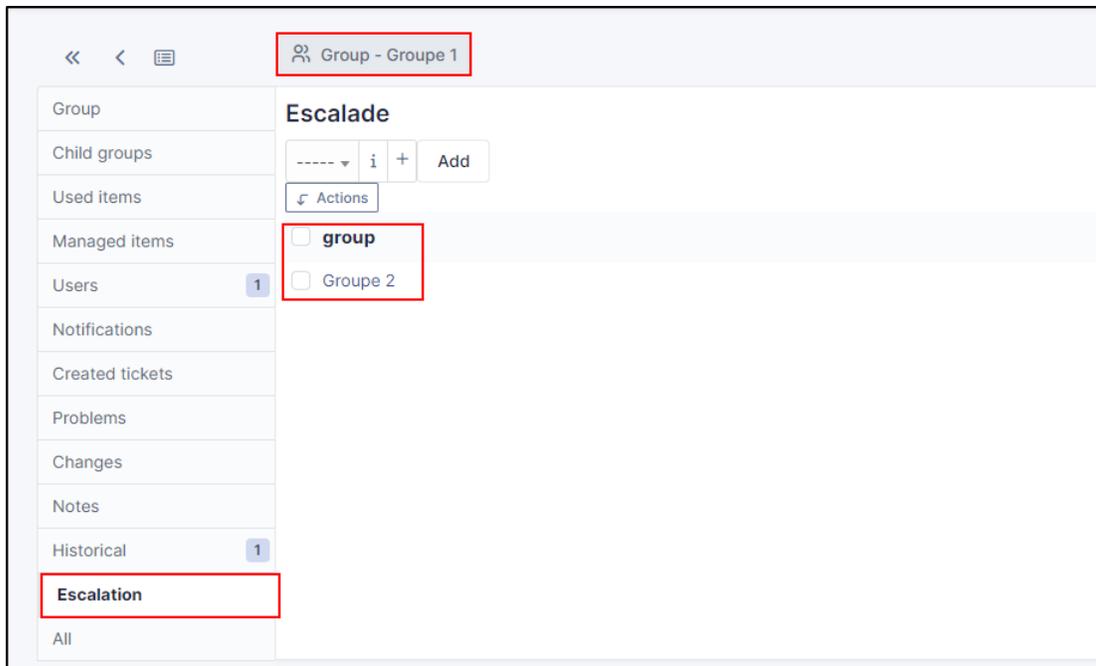

**Предупреждение:** This option can be useful, but it requires all groups to be set up. If, for example, the **technician N1** group can escalate tickets to the **technician N2** group, you need to ensure that the **technician N2** group can escalate tickets to the **technician N3** group and also to the **N1** group, so that a ticket can be escalated if necessary.

Example :

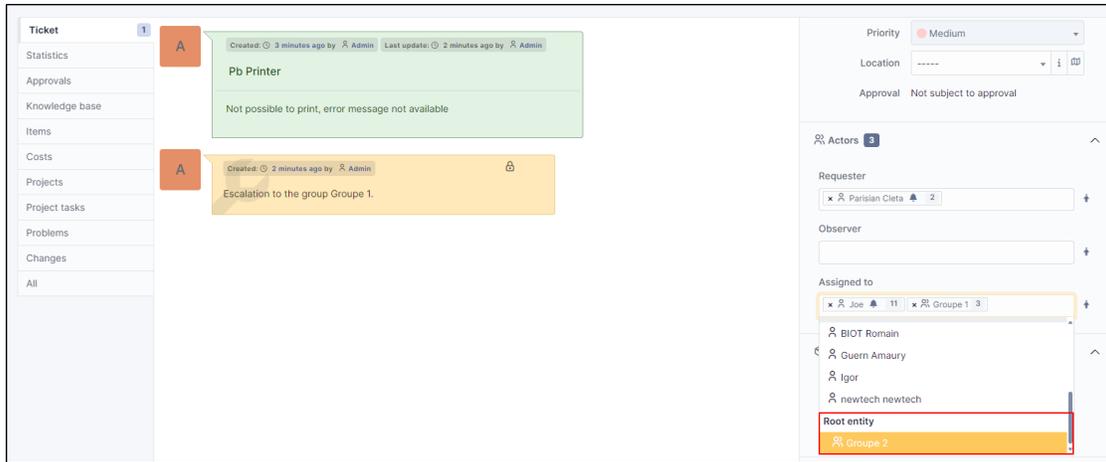

- **Joe** user is added to group **Groupe 1**

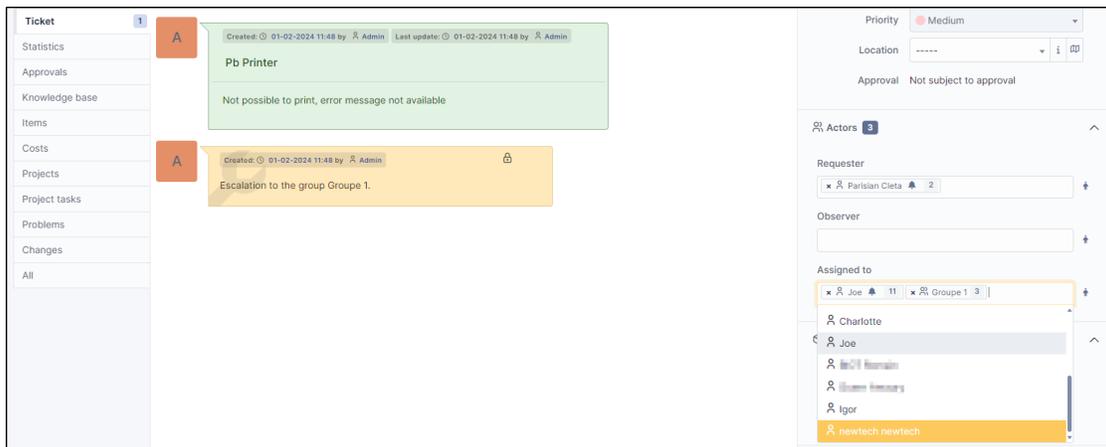

- **Groupe 1** is configured to allow ticket escalation only to **Groupe 2**

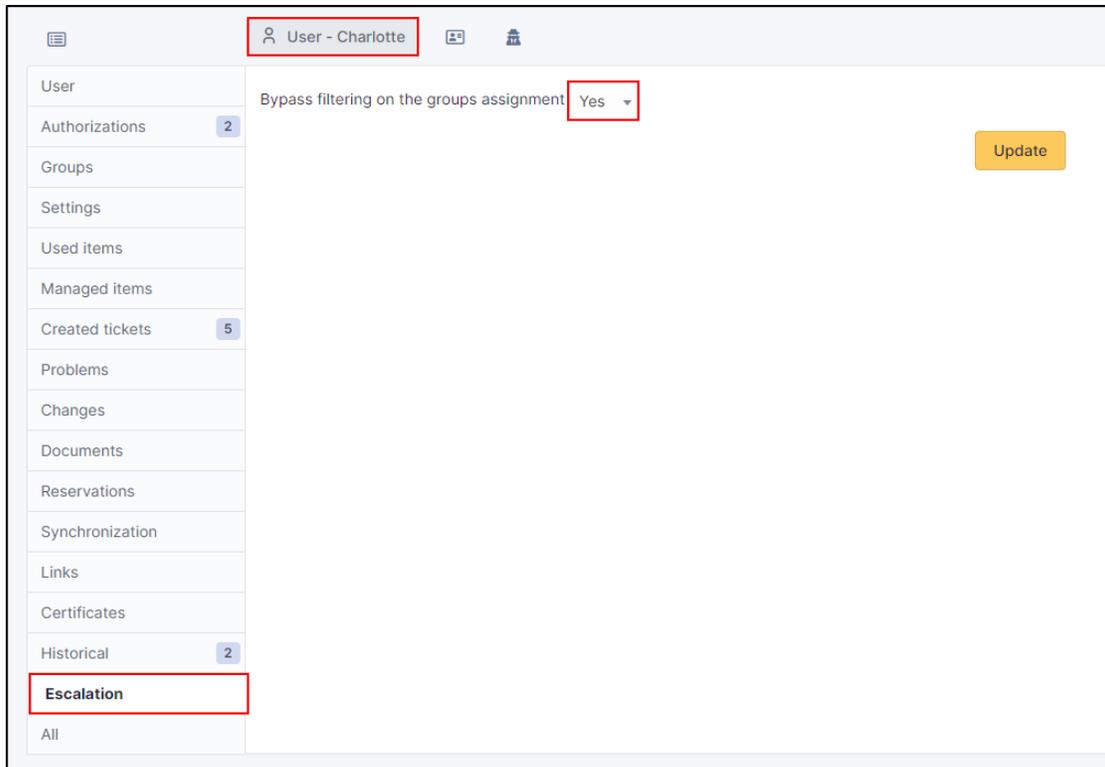

- **Joe** user can only reassign ticket to **Groupe 2** because it's assign to Groupe 1

- For other users not assign to **Groupe 1**, they can't reassign group to ticket (groups are not proposed in the list of assignation)

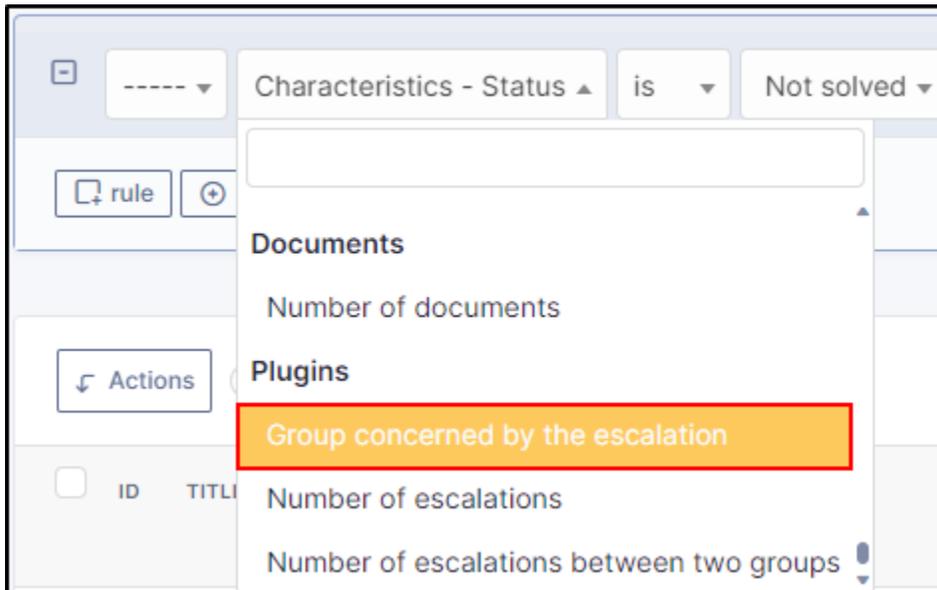

- You can **bypass** this behavior per user

## 7.5 Ticket's search engine

Plugin add three new search option

- Group concerning by escalation

Ex : get all tickets actually escalated to group **Groupe 1**

- Number of escalation

Ex : get all tickets with more than ten escalation

- Number of escalation between two groups

Ex : get all tickets with more than 2 escalations between two groups

## 7.6 Central page

New dashlet to display ticket solved to close and assign to you group

Dashboard	Personal View	Group View	Global View	RSS feeds	Forms	All
TICKETS TO CLOSE (ESCALATED)						1

## 7.7 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

Fields plugin allows to add additional fields on various items GLPI manages: tickets, computers, users, ...

Download	Sources
<a href="https://github.com/pluginsGLPI/fields/releases">https://github.com/pluginsGLPI/fields/releases</a>	<a href="https://github.com/pluginsGLPI/fields">https://github.com/pluginsGLPI/fields</a>

## 8.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 8.2 Features

- Add containers block on various items,
- Add fields into blocks,
- Display blocks in an existing tab or in their own tab,
- Many fields types available,
- Fields can be flagged as required,
- Manage profiles ACLs per container,
- ...

## 8.3 Install the Plugin

- Uncompress the archive.
- Move the `fields` directory to the `<GLPI_ROOT>/plugins` directory
- Navigate to the *Configuration > Plugins* page,
- Install and activate the plugin.

## 8.4 Usage

The plugin will create required tables in the database and some files on disk (into `<GLPI_ROOT>/files/_plugins/fields`) automatically. Those files and tables will be updated along with the plugin.

Plugin usage is quite simple:

- create a block linked with some items,
- create fields in this block.

You will access the plugin configuration from the *Setup > Additionnal fields* menu.

### 8.4.1 Adding a new block

- *Label*: the label of the block that will appears on items forms,
- *Type*: type of display, one of:
  - *Add tab*: will add a new tab on the item form containing the block,
  - *Insertion in the form*: will add the block at the end of the main item form,
  - *Insertion in the form of a specific tab*: will add the block at the end of a specific tab of the item.
- *Associated item type*: a list of items types on which the block will be added,
- *Active*: whether the block is active or not.

---

**Примечание:** You can add only one block of the type *Insertion in the form* for an associated item type.

---

Inserting a block in a specific tab is only possible for one item:

**New item - Block**

Label :

Type :  Associated item type :

Tab :

Active :

Once a block have been created, it is possible to change its label or is active flag, but not its type or associated items list.

## Profiles

You can refine profiles access on the block using the *Profiles* tab from the block. You will be able to choose either *No access*, *Read* or *Write* for every existing profile.

**Profiles**

Self-Service	<input type="text" value="Write"/>
Observer	<input type="text" value="No access"/>
Admin	<input type="text" value="Read"/>
Super-Admin	<input type="text" value="Write"/>
Hotliner	<input type="text" value="Write"/>
Technician	<input type="text" value="Write"/>
Supervisor	<input type="text" value="Write"/>
Read-Only	<input type="text" value="Write"/>

## 8.4.2 Adding a new field

**New item - Field**

Label :

Type :       Default values :

Active :       Mandatory field :

Read only :

[Add a new field](#)

**No field for this block**

- *Label*: the label of the block that will appears on items forms,
- *Type* field type, one of:
  - *Header*: an header label, for visual distinction,
  - *Text (single line)*: a single line (`input/@type="text"`) of text,
  - *Text (multiples lines)*: a multiline (`textarea`) text,
  - *Number*: a single number (no text allowed),
  - *Dropdown*: a configurable dropdown list, values are configured from the main GLPI dropdown configuration you can find in *Setup > Dropdowns* menu,
  - *Yes/No*: a dropdown list with only *Yes* and *No* values,
  - *Date*: a standalone date with a date picker,
  - *Date & time*: a date field with a date picker and a time dropdown field (step is configured from GLPI core),
  - *Users*: list of users.
- *Active*: whether the block is active or not,
- *Read only*: flag this field as read only,
- *Default values*: default field values,
- *Mandatory field*: flag this field as mandatory.

**Предупреждение:** Of course, you will need to pay attention playing with the various options... For example, if you flag a field as mandatory and as read only, and if you do not provide a default value, form validation will fail.

Another example: you should not set a text default value for a number field... That kind of things ;)

Once fields have been created, you can reorder or edit them from the Fields tab of the block:

Add a new field

Label	Type	Default values	Mandatory field	Active	Read only	
A field in the block	Text (single line)		Yes	Yes	No	
Does this work?	Yes/No		No	Yes	No	
Which date?	Date		No	Yes	No	
Make your choice	Dropdown		No	Yes	No	
The user	Users		No	Yes	No	
An inactive field	Text (multiples lines)		No	No	No	

And see what it should look like on a *User* item for example:

- User
- Authorizations 1
- Groups
- Settings
- Used items
- Managed items
- Created tickets 1
- Problems
- Changes
- Documents
- Reservations
- Synchronization
- External links
- Historical 3

**Block as tab**

All

A field in the block : \*

Does this work? :

Which date? :

The user :

Make your choice :  +

## 8.5 Search

All fields that have been added are available in the attached items search forms.

## 8.6 Simplified Interface

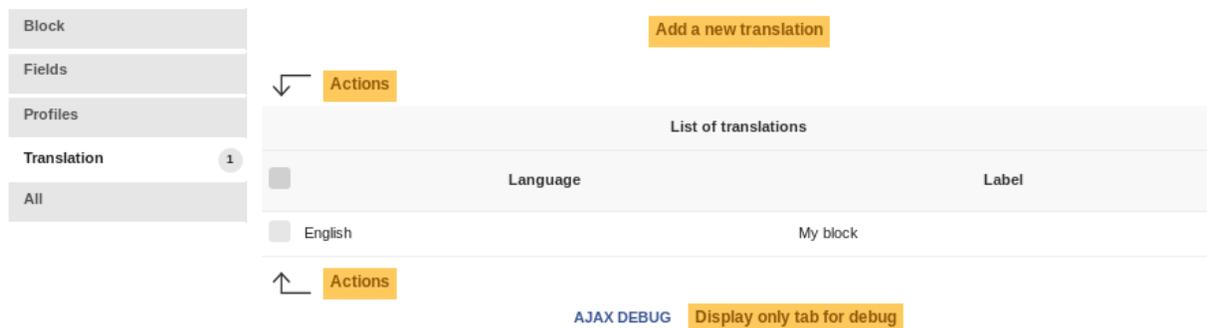

Only blocks attached to tickets and with the type *Insertion in the form* will be displayed in the simplified interface of ticket creation. Of course, it will also take care of current profile rights!

## 8.7 Translations

Добавлено в версии 1.4.0.

Plugin itself is translated using [the transifex services](#); but you also can translate the label values for blocs and fields; the process is identical on both those ones:

On the block form, choose the *Translations* tab:

On block creation, a new translation with current language and value set as label will be created; you can add as many translations as you want.

**New item - Translation**

Language :

Label

Dropdown values can be translated using the core's dropdown configuration.

**Предупреждение:** As of GLPI 9.1.1; some issues on the core side prevent dropdown plugin values to be translated; the possibility has been deactivated in the plugin. It will be enabled again once the core has been fixed.

## 8.8 Entities

If you are using entities in your GLPI instance, a block will be displayed only if the entity it is attached to is compatible with the one of the item it applies to.

When you create or edit a block in multi entities mode, you'll have to choose if the block will be available in children entities:

<b>New item - Block</b>	<b>Root entity</b>	<b>Child entities</b>	No <input type="button" value="v"/> ⓘ
-------------------------	--------------------	-----------------------	---------------------------------------

As an example, let's say our entities have the following structure:

- root
  - A
    - \* C
  - B

The following table will tell you in wich cases the block is displayed or not:

Block entity	Recursive block	Item entity	Block displayed
A	Yes or No	A	Yes
A	Yes or No	B	No
A	Yes	C	Yes
A	No	C	No

## 8.9 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

Download	Sources
<a href="https://github.com/pluginsGLPI/formcreator/releases">https://github.com/pluginsGLPI/formcreator/releases</a>	<a href="https://github.com/pluginsGLPI/formcreator">https://github.com/pluginsGLPI/formcreator</a>

FormCreator is a plugin which allow creation of custom forms of easy access.

## 9.1 Features

- Direct access to forms self-service interface in main menu,
- Highlighting forms in homepages,
- Access to forms controlled: public access, identified user access, restricted access to some profiles,
- Simple and customizable forms,
- Forms organized by categories, entities and languages,
- Questions of any type of presentation: Textareas, lists, LDAP, files, etc,
- Questions organised in sections. Choice of the display order,
- Possibility to display a question based on certain criteria (response to a further question),
- A sharp control on responses from forms: text, numbers, size of fields, email, mandatory fields, regular expressions, etc,
- Creation of one or more tickets from form answers,
- Adding a description per fields, per sections, per forms, entities or languages,
- Formatting the ticket set: answers to questions displayed, tickets templates,
- Preview form created directly in the configuration,
- Translation of forms to serve them in several languages.

You can take a look to [the full changelog](#) from plugin sources.

## 9.2 Install the Plugin

- Uncompress the archive.
- Move the `formcreator` directory to the `<GLPI_ROOT>/plugins` directory
- Navigate to the *Configuration > Plugins* page,
- Install and activate the plugin.

**Предупреждение:** The plugin's directory must have the same name as the plugin:

- **Good:** `glpi/plugins/formcreator`
- **Bad:** `glpi/plugins/formcreator-master`
- **Bad:** `glpi/plugins/formcreator-0.90-1.3.2`

Only one directory must contain the plugin's files of a single plugin in the GLPI plugins directory. **Don't rename the plugin's directory for backup, move it!**

## 9.3 Service catalog

The service catalog is a replacement for the GLPI's simplified interface.

It is enabled on a per entity basis and exists in two flavors

- simplified
- extended

To enable it, edit an entity, open the *Forms* tab and set the field *Helpdesk mode* to *Service catalog simplified* or *Service catalog extended*. This setting handles inheritance from parent entity to children entities.

Users using the simplified interface will benefit a new interface allowing them to:

- browse forms and FAQ with the unified interface
- follow the process of their requests
- book assets
- view their feeds

Users using the extended interface have a more complete view on their requests.

Forms with *Direct access on homepage* enabled will appear in the interface. Users may search by browsing the categories on the left of the screen, and may also search for forms with a natural language search engine.

By default FAQ items in the Knowledge Base also show with forms. The only prerequisite is to associate form categories to knowledge base categories (in *Setup > Dropdowns : Forms > Form categories*).

It is possible to have a distinct display of FAQ in *Administration > Entities > Forms*. When **Distinct menu entry** is selected the service catalog shows a new menu entry on the left. FAQ are browsable by category and key words.

---

**Примечание:** All entity settings for Formcreator propagate to sub entities by default. The administrator may change the settings in a sub entities to break inheritance.

---

### 9.3.1 Overview

The service catalog shows several counters on the top left corner. Those counters show all requests involving the current user as a author, requester, observer, assigned or validator.

The requests displayed here are

- tickets created without Formcreator
- tickets generated by forms having only one target tickets
- form answers when the form has no target ticket
- form answers when the form has several target tickets

The request are spread over 4 counters

- processing
- pending
- to validate
- closed

---

**Примечание:** New requests are not included in the counters.

---

### 9.3.2 RSS feeds

When users are allowed to view RSS feeds, the service catalog shows a menu entry on the left to access them. RSS feeds administration is done in GLPI as usual.

### 9.3.3 Reservations

Users may book an asset with GLPI's reservation system, available in the left menu of the service catalog.

## 9.4 Forms configuration

### 9.4.1 Form creation

---

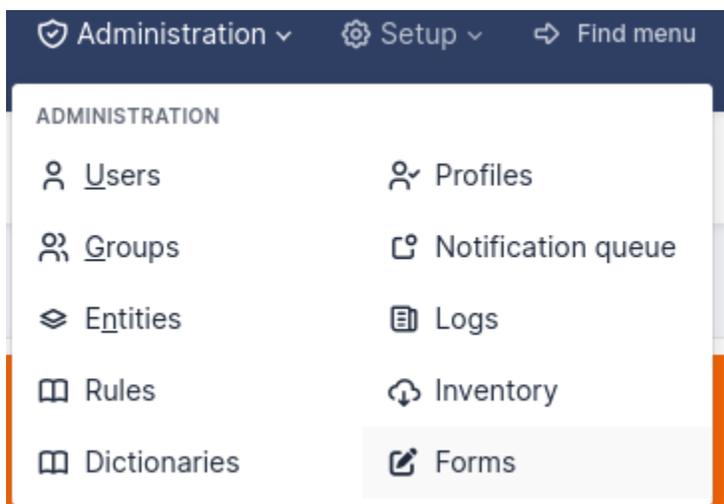

**Примечание:** The right to create forms is enabled to the profiles having the right to update entities in GLPI. Refer to the documentation of GLPI to know how to setup this right.

---

**Примечание:** Forms must be created in the entities where they are intended to be available. A form may be available in its entity and all sub entities if the field **Child entities** is set to **Yes**.

---

1. Navigate to **Administration > Forms**.

1. Click on the button to add a form +

Following fields must be populated:

- **Name:** Name of the form.
- **Active:** A form is inactive by default. You need to explicitly activate it when it is ready to use.

It is recommended to fill the Category field:

- In the simplified interface, categories allow to tidy forms by Blocks.
- If you want to use the **service catalog** you must use form categories.

---

**Примечание:** Form categories are plugin's dropdowns. You can add form categories directly when editing a form using the + next to category field. You can do the same from **Configuration > Dropdowns > Form category**.

---

- **Direct access on homepage:** Direct access to the form from the GLPI's simplified interface.
- **Description:** displays in the list forms.
- **Language:** by default a form is set to the language of its creator. The form will be available only to users using the same language as the form. Choose **All languages** to make the form available to users without language restriction.

- **Header:** displays when the form is displayed.
- **Need to be validate:** If **Yes** a list of validators is displayed. This is a list of GLPI users (with the right **Validate an incident** or **Validate a request** (in its profile) on a compatible entity with the form's entity. The list of validators is a multiple choice list. If no validator is selected all of them are submitted when the form is being used.
- **Default form in service catalog:** if **Yes** the form will display in the service catalog without being filtered by the current category or keywords.

When all fields are filled, click on the **add button** at the bottom of the page.

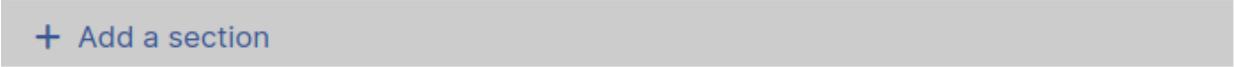

---

**Примечание:** Deleting a form is possible only if there are no associated answers. To delete a form, delete all its answers first from the **Form answers** tab.

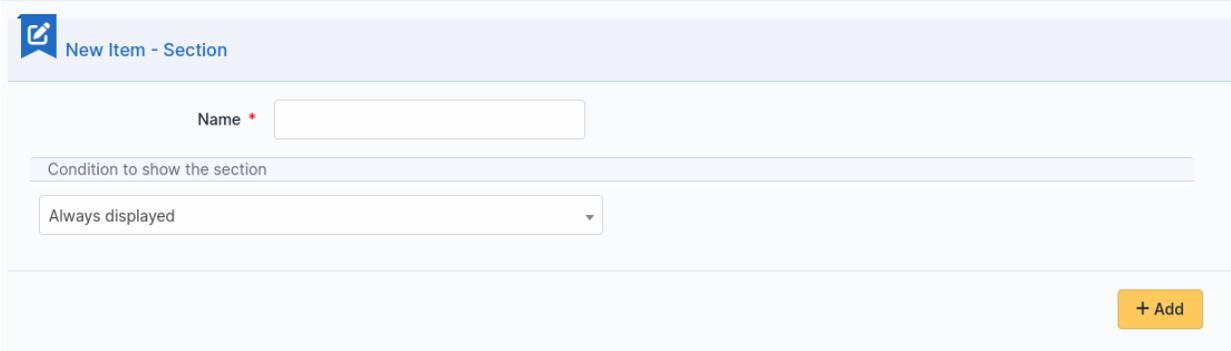

---

## 9.4.2 Sections

After clicking on the tab **Question** the following page displays:

You must create a first **section**. Sections are intended to organize questions in the form.

It is possible to setup conditions to show the whole section, based on the answers provided to questions located in other sections of the form.

## 9.4.3 Questions

Click on the link **Add a question** in a section of your choice.

The following page displays:

A question is made of:

- a title: this is the label of the question in the form.
- a type: see list below.
- a section: the section containing the question. You can move a question to an other section with this field.
- a description: it is displayed under the question in the form. Use it as a hint for the requester, telling him which content is expected.
- a dropdown list **Show field** to enable a condition

It submits the following choices:

- **Always visible:** the field is always displays
- **Hidden unless:** The question is hidden except if answers to other questions matches a condition.
- **Displayed unless:** The question is displayed except if the answers to other questions matches a condition.

Conditions may be multiple. To add or remove a condition two buttons are available:

---

#### Примечание: List of pictograms

- The **circle** allows you to make a question mandatory

, or optional

- **Arrow up** and **arrow down** allow you to reorder questions in a section.
  - Clicking on a question allow you to edit it.
  - **Two stacked squares** allows you to duplicate a question or a whole section.
  - The **recycle bin** allows you to delete a question or a whole section.
- 

Questions are organized on a 4 columns array. You can resize width of questions, reorder them using drag and drop and put up to 4 questions on the same row.

#### 9.4.4 Types of question

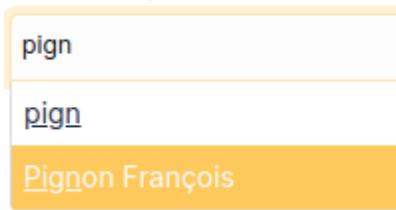

There are about twenty types of questions available. Depending on the chosen type, you need to provide additional information.

---

#### Примечание:

- **Required: Yes/No.** When running the form a red star shows next to label of questions requiring an input.
  - **Default values:** its content depends on the type of the question.
  - **Range Min/Max:** Restricts the value to the given range when running the form.
  - **Additional validation (Regular expression):** You may set a custom regex with a regular expression. Use it when other restriction methods cannot satisfy your needs. Don't forget to specify the delimiters of the regex. You may add any modifier after the closing delimiter.
-

## Actors

This field allows you to choose one or several users:

- in GLPI, available in **Administration** > **Users**
- not in GLPI, by typing an email address

## Checkboxes (multiple choices)

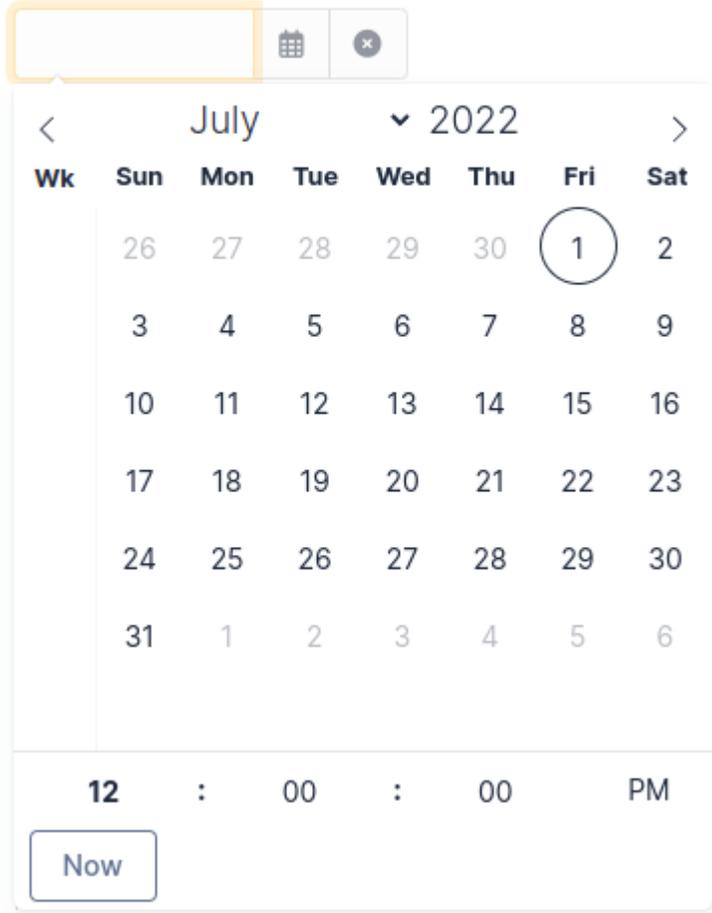

A screenshot of the GLPI question configuration interface for a checkboxes question. The interface is titled 'Question - checkboxes question' and includes several fields: 'Name' (checkboxes question), 'Section' (section), 'Types' (Checkboxes), 'Required' (No), 'Default Values' (empty), 'Values' (Choice 1, Choice 2, Choice 3), 'Description' (checkboxes description), 'Min' (empty), 'Max' (empty), and 'Condition to show the question' (Always displayed). A 'Save' button is located at the bottom right.

Add a line per value in **Values**. Default values may be set in **Default values**, one per line. If this field is empty, no checkbox will be ticked.

Date / Datetime / Time

### datetime question

datetime description

The screenshot shows a form for a 'datetime question'. At the top, there is a text input field with a yellow border, a calendar icon, and a close icon. Below this is a mini calendar for July 2022. The calendar shows the days of the week (Sun, Mon, Tue, Wed, Thu, Fri, Sat) and the dates. The date '1' is circled, indicating it is selected. Below the calendar, the time is set to '12 : 00 : 00 PM' and there is a 'Now' button.

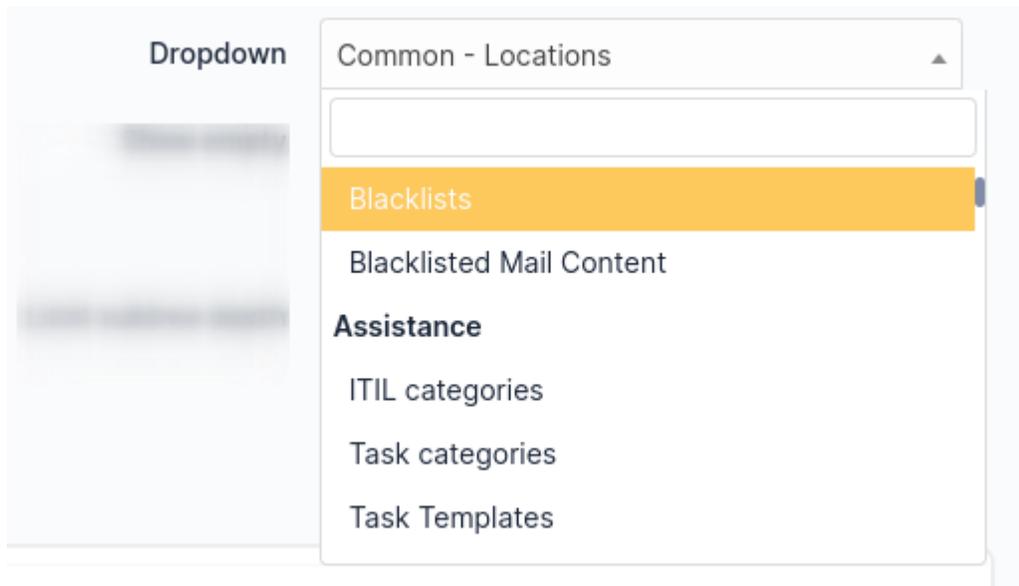

This field allows to select a date, a datetime or a time from a mini calendar.

### Description

This field only displays information. Use it to give more details about a question.

### Dropdown

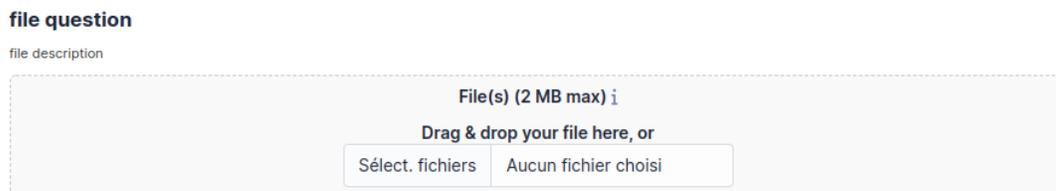

This field allows the user to choose a value among those available in a dropdown from GLPI (in **Configuration > Dropdowns**).

### Email

The answer to this type of field must be a syntactically valid email address.

### File

This field allows the requester to upload a file.

### Float

This field must be a float value. Note you may use a regular expression to tighter restrict the answer.

### GLPI Object

This field allows you to build a dropdown from a GLPI object among those available in the menus:

- Assets
- Assistance
- Management
- Tools
- Administration

## Hidden field

This field is hidden and allows to retrieve an arbitrary value when generating the target (ticket or change).

---

**Примечание:** This type of questions never shows on a form.

---

## Hostname

This field is invisible. It allows to get the hostname of the computer used by the requester, assuming the DNS is able to properly resolve it from its IP address

## Integer

This field must be an integer value. Note you may use a regular expression to tighter restrict the answer.

## IP Address

This field is hidden and collects the IP address of the form requester. It does not show in the form.

## LDAP select

This field allows you to create a dropdown list with objects from a LDAP directory:

The screenshot shows the configuration page for a 'Question - LDAP question'. The form includes the following fields:

- Name:** LDAP question
- Types:** LDAP Select
- Required:** No
- Filter:** (& (uid=\*))
- Description:** LDAP description
- Section:** section
- LDAP Directories:** forumsys
- Show empty:** No
- Attribute:** (AD)User ID
- Condition to show the question:** Always displayed

A 'Save' button is located at the bottom right of the configuration form.

---

**Примечание:** This type of questions cannot be used to fill actors of a target.

---

### Multiselect (multiple choice)

This field allows you to create a dropdown list with ability to select multiple items. Values are added one per line in the field **Values**. You may set default values, one per line in *Default values*\*. If no default value is set then no item will be selected by default.

### Request type

This field is a dropdown with «Incident» or «Request» choices. It can be used to set the request type of a ticket being generated by the form.

### Radio buttons (one choice only)

#### radio question

radios description

- Choice 1
- Choice 2
- Choice 3

The screenshot shows the configuration interface for a 'radio question' in GLPI. The interface is titled 'Question - radio question' and contains the following fields:

- Name \***: radio question
- Section**: section
- Type**: Radios
- Required**: No
- Default Values**: (empty text box)
- Values**: Choice 1, Choice 2, Choice 3
- Description**: radios description
- Condition to show the question**: Always displayed

A 'Save' button is located at the bottom right of the configuration area.

Add a line per value in **Values**. A default value may be set in **Default value**. If this field is empty, no radio will be selected.

### Select (one choice only)

This field allows you to create a dropdown list and set its items. Items are added one per line in **Values**. Default value may be set in **Default value**. If there is no default, no item is selected by default.

### Tags

This is a hidden field to add a tag to the form for future processing.

---

**Примечание:** This type of field is only available when the plugin **Tag** is installed and enabled.

---

### Text

This field allows you to input a single line of text.

### Text area

This field allows you to input several lines of text.

### Urgency

This field allows you to select an urgency defined in GLPI.

## 9.4.5 Conditions

Conditions are expressions involving questions and sections which are evaluated in order to determine

- if a question is displayed
- if a section is displayed
- if the submit button of a form is displayed
- if a target (see below) must be generated

Available operators in an assertion are:

- equals
- not equals
- less than
- greater than
- less than or equal
- greater than or equal
- is visible
- is not visible
- matches a regular expression

The condition expression can be used with the following rules:

- **Hidden unless:** the item is hidden or not generated except when the expression is true
- **Displayed unless:** the item is displayed or generated except when the expression is true

### 9.4.6 Access types

Three values are available:

- **Public access:** Anonymous users may access the form; you may use it in an intranet.
- **Private access:** Users having a GLPI account may access the form.
- **Restricted access:** Only users having the specified profiles may access the form.

When a form is set to **Public access** it is possible to enable a simple captcha. This captcha should prevent spamming if a form is accessible from internet.

---

**Примечание:** Captchas are not enabled by default on anonymous forms. Administrators need to enable them explicitly depending on how the form may be accessible from an hostile network such Internet.

---

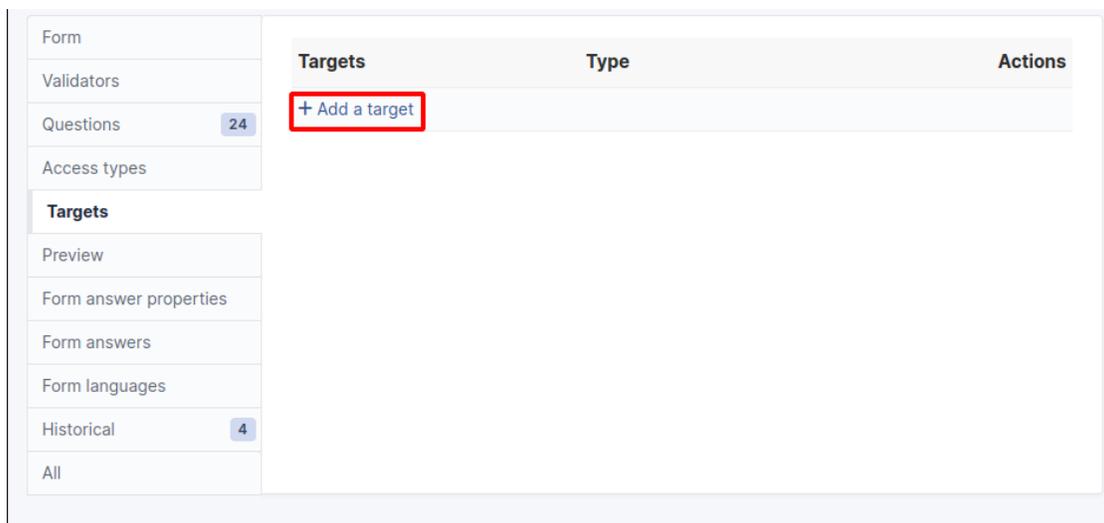

### 9.4.7 Targets

There are three types of targets for a form:

- tickets
- changes
- problems

It is possible to generate any number of targets from a single form. Mixing types of targets is also possible.

To create a target click on the link **Add a target**

The screenshot shows the configuration interface for a form in GLPI. On the left is a sidebar menu with options: Form, Validators, Questions (24), Access types, **Targets**, Preview, Form answer properties, Form answers, Form languages, Historical (4), and All. The main area displays a table with columns 'Targets', 'Type', and 'Actions'. A red box highlights a '+ Add a target' button in the 'Targets' column.

Targets	Type	Actions
+ Add a target		

The following window is then displayed:

Choose a target name and type, then validate. The new target is created and is available for tuning.

### 9.4.8 Preview

This tab allows you to view how the form will be rendered and test it without activating it.

---

**Примечание:** Submitting answers from the preview will be actually saved, and will generate targets if the form is not configured with validation.

---

### 9.4.9 Form answers

This tab shows all answers saved for the form.

---

**Примечание:** To delete a form, all its answers must be deleted first. A warning shows at the bottom of the main tab of a form as a reminder.

---

### 9.4.10 Categories

**Menu :** *Setup > Dropdowns : Forms > Form categories*

Form categories allow you to arrange your forms list. Forms are displayed when they belong to the selected category or any sub category. When a form does not have any category, it is displayed when no category is selected or when the user selects «view all».

You can add or edit categories generally from the Setup menu : *Setup > Dropdowns*.

You can also add new categories directly from the form page like all GLPI dropdowns.

They are defined by entities and can be translated since GLPI 0.85 like all other dropdowns.

---

**Примечание:** Dropdowns translation must be enabled on GLPI general configuration page *Setup > General, General setup > Translate dropdowns = Yes*

---

---

**Примечание:** Categories may be associated to *Knowledge base categories*. This link is necessary to allow FAQ entries to show along your forms.

---

## Configuration

The screenshot shows the GLPI configuration page for 'Form categories'. The top navigation bar includes the GLPI logo and a user profile icon. The breadcrumb trail is 'Home / Setup / Dropdowns / Form categories'. A search bar is located on the right. The main content area features a filter bar with 'Items Seen' and 'contains' dropdowns. Below this are buttons for 'rule', '+ group', 'Search', a star icon, and a refresh icon. A section titled 'Actions' contains a toggle switch, a search icon, a link icon, and a download icon. A list of categories is shown with checkboxes: 'COMPLETE NAME', 'Computer problems', and 'Human resources'. At the bottom, there is a pagination control showing '20 rows / page' and 'Showing 1 to 2 of 2 rows'.

## Render

The screenshot displays the 'ForCreator users page' in GLPI. The top navigation bar shows the GLPI logo and a menu with items like 'Assets', 'Assistance', 'Management', 'Tools', 'Administration', 'Setup', and 'Find menu'. The user is identified as 'Super-Admin' with the role 'Root entity (Arborescence)'. The breadcrumb trail is 'Home'. The main content area is titled 'Welcome to our ForCreator users page.' and includes a sub-header: 'You can select a specific form from below to [easily create a ticket](#) on a specific subject.' Below this is a search bar with the placeholder text 'What are you looking for?'. There are three buttons: 'Network problem', 'New user', and 'Software request'. On the left, a 'Categories' sidebar lists 'Computer problems' and 'Human resources'. On the right, there are two sections: 'My 5 last forms (requester)' showing a 'New arrival' on '2022-06-24 10:04' and 'All my forms (requester)', and 'My 5 last forms (validator)' showing 'No form waiting for validation'.

### 9.4.11 Questions

After the creation of a form, create fields for the user to fill out.

The screenshot shows a web form for creating a new question. The form is titled "New Item - Question" and includes the following fields:

- Name \***: A text input field.
- Section**: A dropdown menu with "section" selected.
- Type**: A dropdown menu with "---" selected.
- Description**: A large text area for entering the question's description.
- Condition to show the question**: A dropdown menu with "Always displayed" selected.
- + Add**: A yellow button to save the question.

The name of the questions will appear on the left and the field type selected on the right.

The Description will be under the input field.

Additional options may be displayed depending on the currently selected question type.

If validation of the input is desired, it can be implemented following [PHP Regular Expressions](#).

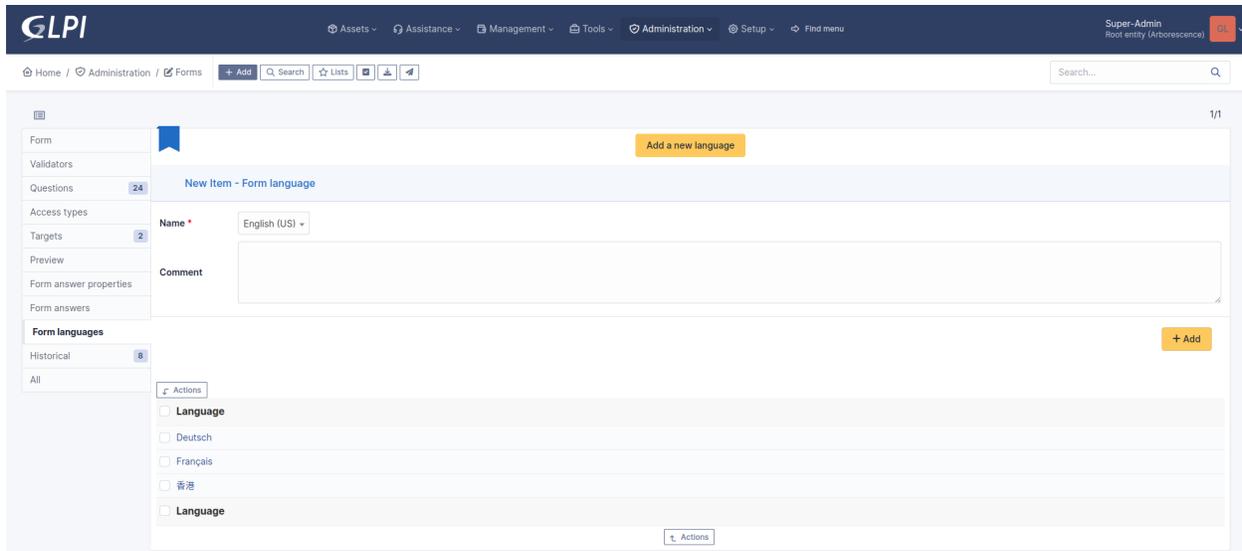

If you want to show or hide questions depending on the answers of other questions, use the *show fields* area when editing a question. In the version 2.5.0 you may use more complex expressions checking for the content of several questions, and use logic operator **OR** and **AND**. The precedence of boolean operators applies, meaning that **AND** has precedence over **OR**.

### 9.4.12 Translation

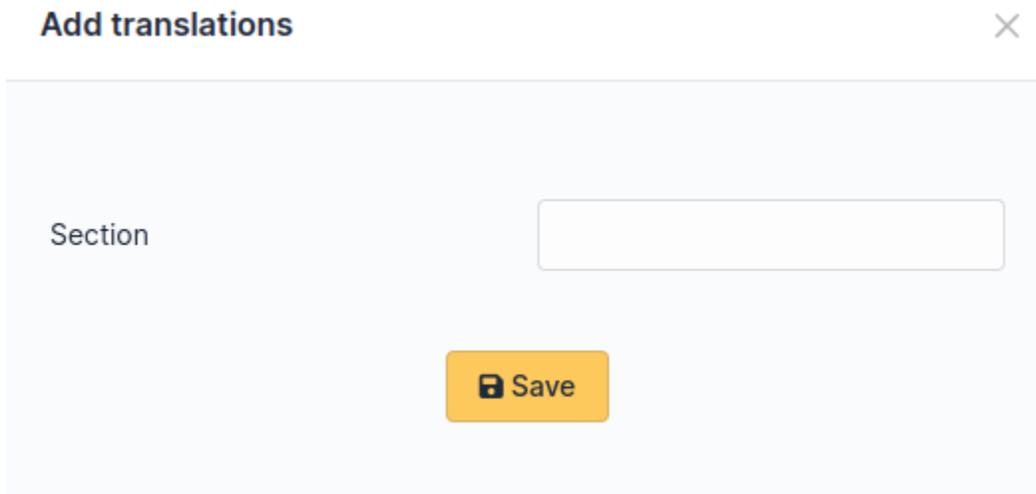

In some cases a form should be available in several languages. Choose first in which language a form should be created. This language should be english (US or UK) or the language that most of target users understand. This is the fallback language if no alternative is found.

This language is also used as reference in the translation process. Then be sure that the chosen language is readable by the user who will translate the form.

To translate a form open the tab **Form languages**, then create all languages you need to provide to users.

Choose a language added to the form and click it to begin or resume translation, then select the tab **Translations**. Click the button **New translation** and a popup dialog will open and show a string to translate. Type the translation, and click save or validate with **Enter** on your keyboard.

If another string must be translated, it will show immediately. If no more string needs to be translated, a message will show instead.

## Add translations

No more string to translate

Save

When you close the dialog the list of translated strings is refreshed. You can edit a translation by clicking on it, delete one or several translations with the checkboxes on the left of the list and the **Delete** button\*\*. You can also filter the list with the filter input box.

The screenshot shows the GLPI Administration interface. The top navigation bar includes 'Assets', 'Assistance', 'Management', 'Tools', 'Administration', 'Setup', and 'Find menu'. The user is logged in as 'Super-Admin'. The main content area is titled 'Form language - fr\_FR' and contains a 'Translations' section. A table lists the following entries:

Original string	Translation
translatable form	Formulaire traduisible

There are checkboxes on the left of the table rows and a 'Delete' button below the table. A '+ New translation' button and a 'Filter list' input box are also present.

## 9.5 Targets

Targets are objects generated by FormCreator submission. If a form requires validation, the targets are delayed until approbation.

**Примечание:** Targets are currently tickets only.

A target ticket defines the ticket generated by the form. You may have several targets per form. Open the tab *Destination* and create a target with a name and a type (currently ticket only).

## 9.5.1 Target ticket

A target ticket generates a ticket.

Question	Title	Answer	Section
Full form	-	##FULLFORM##	-

The ticket is build from scratch or from a ticket template available in GLPI. You may

- customize the name of the target ticket to distinguish it from possible other targets,
- customize the title and description of the ticket using questions and answers,
- set the destination entity of the generated ticket,
- set a time to resolve (formerly due date),
- set the type of ticket (request or incident),
- set the associated elements,
- set the category,
- set the urgency,
- set the location,
- assign tags to the ticket if the plugin *Tags* is available,
- link the generated ticket to other tickets
- define actors of the ticket.
- define conditions to meet to generate the target ticket

---

**Примечание:** Setting an urgency, a category or a location (specific or from a question) overrides the urgency defined in a ticket template (if any)

---

## Destination entity

Many choices are available:

- Current active entity: the entity of the requester who fills a form,
- Default requester's entity: the default entity defined for the user who fills the form,
- First dynamic requester's entity (alphabetical): sorts all dynamic entities of the requester alphabetically and selects the first one,
- Last dynamic requester's entity (alphabetical): sorts all dynamic entities of the requester alphabetically and selects the last one,
- The form's entity: the entity where is located the form being filled by the requester,
- Default entity of the validator: the default entity of the validator who validates the request,
- Specific entity: an entity set by the form's designer,
- Default entity of a user type question answer: the default entity of a user chosen by the requester in a question.
- From a GLPI object > Entity type question answer: the entity chosen by the requester from a question.

---

**Примечание:** Default requester's entity may be not set, then there is a risk to generate tickets in the root entity.

---

---

**Примечание:** Default entity of the validator may be not set, then there is a risk to generate tickets in the root entity.

---

---

**Примечание:** Dynamic requester's entity requires user synchronization, then there is a risk to generate tickets in the root entity.

---

## Ticket template

Sets predefined settings for the ticket from a template. All settings defined in the target ticket will override the values found in the template.

## Request type

Sets the type of the generated ticket

- Default or from a template: value set by GLPI when no type is set, or from a template, if any and if this template defines a type
- Specific type: either request or incident,
- Equals to the answer to the question: the value is set from a request type question.

### Associated elements

Sets associated elements to the generated ticket

None : self explanatory, Specific asset: an asset set by the designer of the form, Equals to the answer to a question: an asset set by the requester, from a question Last valid answer: an asset set by the requester, from the last visible question eligible for this purpose

### Category

Sets the category of the generated ticket

- Category fro template or none: sets the category from a template if any and if this template has a predefined category. None in all other cases,
- Specific category: a category set by the form's designer,
- Equals to the answer to a question: a category choosen by the requester,
- lastr valid answer: a category from the last visible question of type category,

### Urgency

- Urgency fro template or none: sets the urgency from a template if any and if this template has a predefined urgency. None in all other cases,
- Specific urgency: an urgency set by the form's designer
- Equals to the answer to a question: a category choosen by the requester,

### Location

- Location from template or none: sets the location from a template if any and if this template has a predefined location. None in all other cases,
- Specific location: a location set by the form's designer
- Equals to the answer to a question: a category choosen by the requester,

### Condition to show the target

The form's designer may restrict creation of the ticket depending on conditions.

## 9.5.2 Target change

A target change generates a change

The change is built from scratch. You may

- customize the title, description, impact, control list, deployment path, backup plan and checklist fields using questions and answers,
- set the urgency from a value or a question
- choose the entity of the change among many policies
- set the time to resolve
- define the actors of the change
- set the category of the change
- define conditions to meet to generate the target ticket

### 9.5.3 Target description templating

Target ticket and target change both have description template. By default the template uses the tag `##FULLFORM##`. This tag is a default template where all questions and sections are displayed in the same order as the form.

Each question has 2 tags

- `##question_x##` which is replaced by the label of the question. X is the ID of the question.
- `##answer_x##` which is replaced by the answer to a question. X is the ID of the matching question.

Questions of type dropdown support more complex expression like `##answer_x.name##`. x still means the ID of a question. the word after the dot is the name of a property available in the search options of the itemtype of the dropdown question.

As an example, consider a dropdown question which shows locations. The itemtype set by the form designer is «Location». The designer can render in the target many fields of the location selected by the requester, such address, postcode, state, building, and many other data. To find them, the admin may rely on the list available in the search filters for a location.

## 9.6 Issues lifecycle

### 9.6.1 Abstract

The service catalog relies mostly on a list of issues (or assistance request). Issues are created and maintained upon events related to tickets and form answers.

When a ticket is created from GLPI, then a new issue is created in the database. When this ticket is being updated, the issue is updated to reflect all relevant changes.

Form answers are created when a requester fills a form and submits it. When a form answer is created a new issue is created as well. As a form answer may or may not trigger the creation of tickets, issues behave differently depending on this quantity of generated tickets.

### 9.6.2 Ticket created from GLPI

When a ticket is created from GLPI, the issue reflects most useful information from this ticket.

### 9.6.3 Form answer without any generated ticket

When a form answer did not generate a ticket, or when the form answer generating tickets is waiting for validation, then the issue reflects the form answer.

### 9.6.4 Form answer with a single generated ticket

When a form answer triggered the creation of one and only one ticket, then the issue reflects this ticket. This is also true when the approval of a form answer triggers the creation of a single ticket.

### 9.6.5 Form answer with several generated tickets

When a form answer generated several tickets, then the issue reflects a list of those tickets. Each ticket is viewable by the requester, if he is granted to view it.

### 9.6.6 Status

#### Computation of status

Issues follow the lifecycle of tickets or form answers, depending on which object it reflects.

When an issue reflects a single ticket, its status takes into account the validation status of a ticket, if any. The validation status of the ticket takes precedence when the ticket is not solved and waiting for approval or has been refused. For all other cases, the issue shows the regular ticket status.

You may refer to the following table to have a quick view of how the status is computed:

		Validation Status			
		NONE	WAITING	REFUSED	ACCEPTED
Ticket Status	INCOMING	T	V	V	T
	ASSIGNED	T	V	V	T
	PLANNED	T	V	V	T
	WAITING	T	V	V	T
	SOLVED	T	T	T	T
	CLOSED	T	T	T	T

- T = status picked from Ticket
- V = status picked from Validation

When an issue reflects several tickets then the status of each ticket is computed from the above description, and the least advanced status is used. If an issue reflects 3 tickets having statuses Waiting, Resolved and Closed, then the chosen status is Waiting. This means that an issue is closed only when all its tickets are closed.

### searching issues by status

The search engine shows many statuses. Some are shortcuts to search several statuses at once, like tickets, some are specific to the statuses of form answers.

- new: new issues
- processing (assigned): processing issues
- processing (planned): planned issues
- waiting: issues waiting for information from requester or waiting for validation by a validator
- solved: issues solved or refused by a validator
- closed: issues closed or accepted by a validator (this happens when no ticket has been generated after validation)
- not solved: all statuses but solved or closed
- not closed: all statuses but closed
- solved + closed: issues solved or closed
- all: any status
- accepted: issues accepted by a validator
- refused: issues refused by a validator
- 

## 9.7 Exporting and importing forms

### 9.7.1 Abstract

Formcreator allows exporting and importing forms between instances of GLPI.

This feature is designed to let administrators develop forms on a testing environment and copy them on a production environment.

When a form is being imported the plugin searches for a matching form in the database. This is done with the help of a random identifier created when a new form is instantiated. Each sub object (sections, questions, conditions, targets) also have a random identifier. This helps the plugin to find a matching item and update it if necessary. Thanks to this mechanism Formcreator is able to update a form when it is imported more than once.

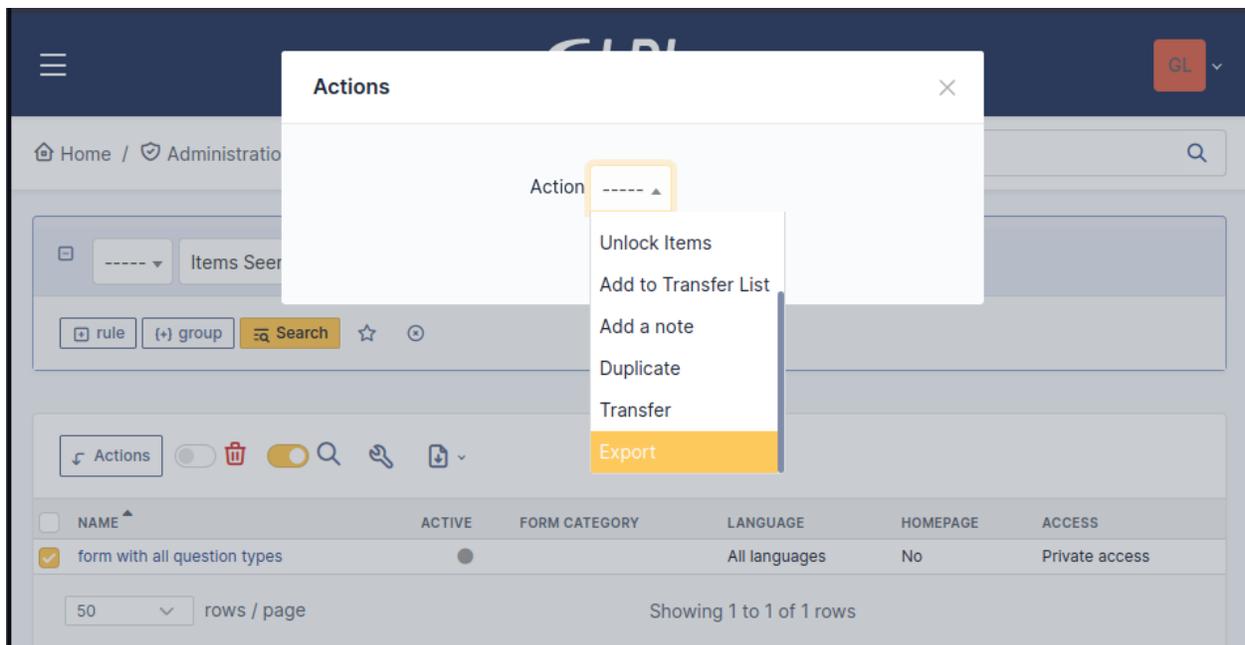

### 9.7.2 Limitations

A form may contain relations to objects of GLPI itself (mostly users, groups, categories, entities). There is currently no reliable way to maintain relations between forms and GLPI's objects or assets across instances. It is therefore highly recommended to develop forms on a testing environment with a reasonably recent copy of the production database.

The export / import feature does not support importing forms across different versions of Formcreator. The version 2.10 shows a warning if it detects an attempt of importing forms from a previous version. In version 2.11 such imports are not allowed.

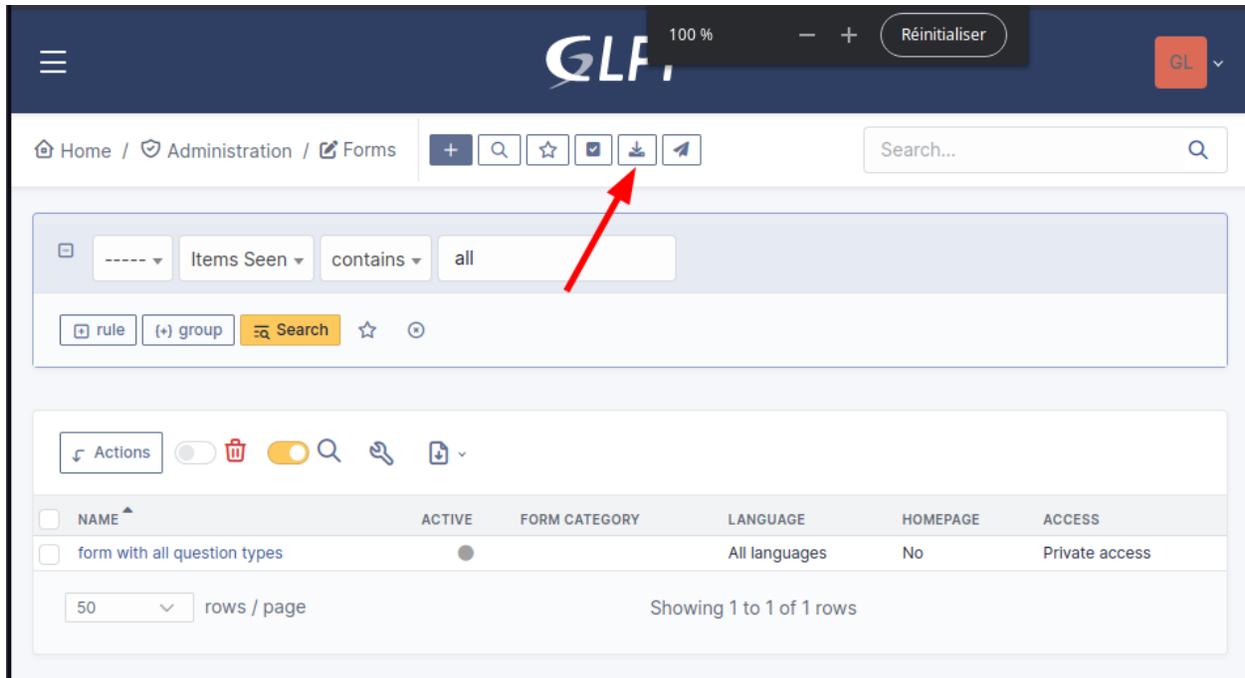

### 9.7.3 Exporting forms

1. Navigate to **Administration > Forms**
2. Use massive actions to export one or more forms. Clicking on the **Post** button will start the download of a JSON formatted file. This file contains all forms selected for the export.

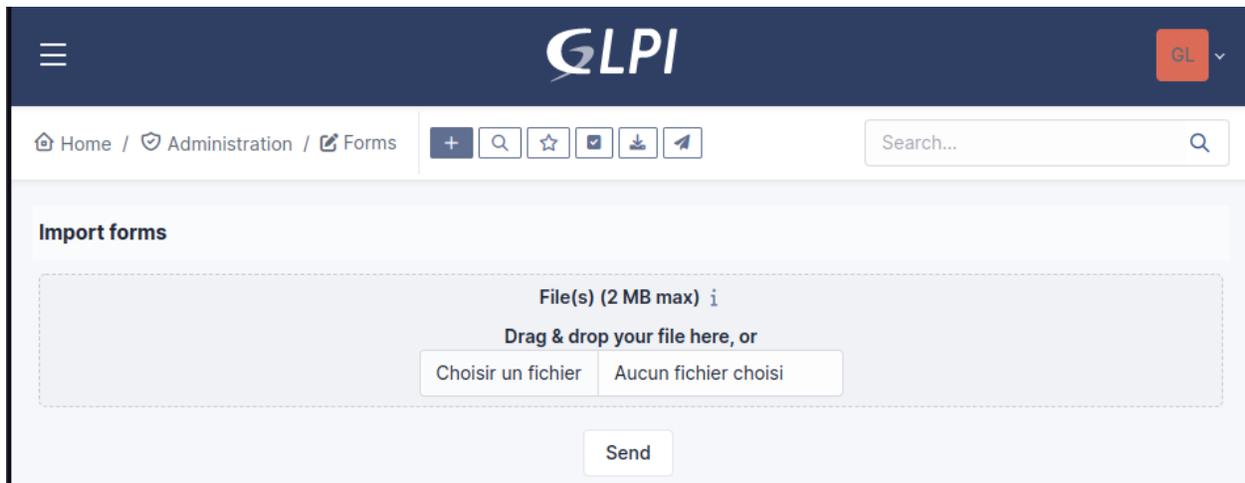

## 9.7.4 Importing forms

1. Navigate to **Administration** > **Forms**
2. Use the toolbar to import forms.

3. Select one or more JSON files created with the same version of Formcreator and validate.

1. Depending on the complexity and the quantity of forms the process may be slow. Please be patient.
2. Carefully check the messages when the import completes. You may get warnings and errors.

## 9.7.5 Import behavior

### Entities

When Formcreator imports a form, it checks that the entity of the form exists and the user has right to update entities. If not, the form is ignored and trigger a warning.

### Form categories

Form categories are created if they don't exist yet.

### Users and groups

The users and groups found in target actors must exist. If not, the import of the form will stop with an error, leading to an incomplete form. Other forms will be imported.

---

Download	Sources
<a href="https://github.com/pluginsGLPI/genericobject/releases">https://github.com/pluginsGLPI/genericobject/releases</a>	<a href="https://github.com/pluginsGLPI/genericobject">https://github.com/pluginsGLPI/genericobject</a>

## 10.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 10.2 Возможности

Этот плагин позволяет добавить новые типы объектов инвентаризации, интегрированные в фреймворк GLPI.

Поддерживает следующие возможности GLPI:

- Управление организациями и суборганизациями;
- поиск;
- шаблоны;
- история;

- интеграция с хелпдеск;
- CSV file injection plugin integration;
- Item uninstallation plugin integration;
- order management plugin integration.

### 10.3 Пример применения

**Objective:** Manage your car fleet like the rest of your IT Assets.

- Создать новый тип объектов инвентаризации *car*.
- Добавьте новое поле для *car*, например: *name*, *serial number*, *inventory number*, *type*, *model*, *color*, *state* и тд.
- Опишите поведение *car*: видим в суборганизации, сохранение истории и тд.
- Установите права на *cars*.
- Активируйте объект *cars*.
- Управляйте коллекцией *cars* в GLPI.

### 10.4 Установить плагин

- Распаковать архив
- Переместите папку `genericobject` в папку `<GLPI_ROOT>/plugins`
- Navigate to the *Configuration > Plugins* page
- Install and activate the plugin

### 10.5 Использование

#### 10.5.1 Создать новый тип объекта

Это первый шаг.

- Нажмите на кнопку `+` на странице настройки плагина.
- Создать новый тип инвентарного объекта
  - *name*: обязательный, в нижнем регистре и должен содержать только буквы;
  - *label*: по умолчанию, такое же как и имя.
- Подтвердить.
- Активируйте новый тип объекта для того, чтобы его использовать.

**Example:** Создайте новый тип инвентарных объектов *car*.

## 10.5.2 Edit labels

Для каждого типа файл языка доступен в `<GLPI_ROOT>/files/_plugins/genericobject/locales/itemtype/`

Плагин создает:

- Файлы перевода для текущего языка
- Файлы перевода для языка по умолчанию

---

**Примечание:** Если текущий и язык по умолчанию одинаковые, то только один файл будет создан.

---

Для изменения названия типа объекта, для английского языка, измените файл:

```
<?php
// <GLPI_ROOT>/files/_plugins/genericobject/locales/<itemtype>/<itemtype>.en_GB.php
$LANG['genericobject']['<itemtype>'][1] = "<type's label>";
```

You can also define labels globally in `<GLPI_ROOT>/files/_plugins/genericobject/locales/fields.<lang>.php` files:

```
<?php
// <GLPI_ROOT>/files/_plugins/genericobject/locales/<itemtype>/<itemtype>.en_GB.php
$LANG['genericobject']['fields']['<itemtype>'] = "<type's label>";
```

## 10.5.3 Setup behaviour

**Example:** Describe the behaviour of a *car*: visible in subentity, retain history, etc.

The new type will be managed the same way as the usual GLPI types (computer, monitor, network device, etc.)

---

**Примечание:** All objects are at least assigned to an *entity*

---

The Behaviour tab allows you to define:

- *child-entities*: allows the type to be recursive;
- *Helpdesk*: allows an object to be associated to a ticket;
- *Trash*: use GLPI's trash functionality;
- *Notes*: use GLPI's note functionality;
- *History*: разрешить историю для этого типа;
- *Templates*: разрешить управление шаблонами;
- *Documents*: разрешить добавлять документы к объектам этого типа;
- *Loans*: allows objects to be loaned;
- *Contracts*: соединить объект с одним или более контактами;
- *Network connections*: allow ports to be used and management for this type;
- *CSV file injection plugin*: allows this type to be available for use in the plugin;

- *Item uninstallation plugin*: allows this type to be uninstalled;
- *Order management plugin*: allows this type to be linked to an order;

### 10.5.4 Добавить поля

**Example:** Добавьте новое поле для *car*, например: *name*, *serial number*, *inventory number*, *type*, *model*, *color*, *state* и тд.

Перейдите во вкладку *Fields*.

Плагин поставлется с несколькими, готовыми для использования, полями:

- Имя
- Тип
- Модель
- Серийный номер
- Инвентарный номер
- Пользователь объекта
- Группа
- Статус
- Комментарии
- Заметки
- Расположение
- Другое
- Производитель
- URL
- Дата создания
- Срок истечения
- Категория
- Виден в хелпдеске
- Специалист, ответственный за оборудование
- Домен
- Контакт
- Контактный телефон

---

**Примечание:** Using some behaviour will automatically add some fields to the object:

---

- Сетевые соединения => расположение
- loans => location
- helpdesk => видим в Helpdesk
- notes => notepad

## интеграция с хелпдеском

Для использования объекта в хелпдеске, используйте настройку:

- In *Behaviour* tab : *use helpdesk* must be set to **Yes**.
- if the *User* field is defined, it allows item to be visible in the *My Items* list (as item whose owner is the user).
- if the *Group* field is defined, it allows item to be visible in the *My Items* list too (as item belonging to a group in which the user belongs to).
- if *Helpdesk visible* field is set and if the value is set to **No** in the object, then the object won't be visible at all in the helpdesk.

### 10.5.5 Добавить новые поля

**Примечание:** New fields will be available for all object's types.

- Create a new file named <GLPI\_ROOT>/files/\_plugins/genericobject/fields/<type>.constant.php

For example, for a *car* type the constant file will be <GLPI\_ROOT>/files/\_plugins/genericobject/fields/car.constant.php.

Please note that the file's first line must be the following, otherwise the new fields won't appear in the list:

```
<?php
global $GO_FIELDS, $LANG;
```

- Add the new fields definitions.

### 10.5.6 Add a simple dropdown field

```
<?php
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['name']      = $LANG['genericobject
↪']["<type's name>"][2];
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['field']    = 'color';
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['input_type'] = 'dropdown';
```

**Примечание:** The language variable must be defined in the language file (see explanation above).

- Add a dropdown field that is assigned to an entity:

```
<?php
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['name']      = $LANG['genericobject
↪']["<type's name>"][2];
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['field']    = 'color';
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['input_type'] = 'dropdown';
//Does the dropdown take care of entities ? (true/false)
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['entities_id'] = true;
```

(continues on next page)

(продолжение с предыдущей страницы)

```
//Can values be recursive ? (true/false, only taking in account if entities_id is set to
→ true)
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['is_recursive'] = true;
```

### 10.5.7 Add a tree dropdown field

```
<?php
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['name']      = $LANG['genericobject
→']["<type's name>"][2];
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['field']    = 'color';
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['input_type'] = 'dropdown';
//Is it a tree-dropdown, or a simple one ? (true/false)
$GO_FIELDS['plugin_genericobject_mytypecolors_id']['is_tree']  = true;
```

**Примечание:** You can use at the same time the following parameters : *entities\_id*, *is\_recursive*, *is\_tree*.

### 10.5.8 Add a dropdown field that is based on a GLPI-core object (user, location...)

```
<?php
$GO_FIELDS['users_id_passengers_id']['name']      = 'Passenger';
$GO_FIELDS['users_id_passengers_id']['input_type'] = 'dropdown';
```

**Примечание:** Name between brackets ([]) **MUST** begin with *users\_id* in order to be recognized as a field based on GLPI users' list.

See file <GLPI\_ROOT>/files/\_plugins/genericobject/fields/field.constant.php to get a complete list of available fields.

### 10.5.9 Add a global dropdown

A global dropdown can be used in all itemtypes. A good example would be :

```
<?php
$GO_FIELDS['categories_id']['name']      = $LANG['common'][36];
$GO_FIELDS['categories_id']['input_type'] = 'dropdown';
$GO_FIELDS['categories_id']['dropdown_type'] = 'global';
```

A specific category table will be created for each itemtype. The table name and field name will be computed this way:

- table : `glpi_plugin_genericobject_<itemtypename>_category`
- field name : `plugin_genericobject_<itemtype>categories_id`

### 10.5.10 Добавить целочисленное поле

```
<?php
$GO_FIELDS['testinteger']['name']      = 'testinteger';
$GO_FIELDS['testinteger']['input_type'] = 'integer';
$GO_FIELDS['testinteger']['min']      = 10; //not mandatory, by default 0
$GO_FIELDS['testinteger']['max']      = 40; //not mandatory, by default 100
$GO_FIELDS['testinteger']['step']     = 3; //not mandatory, by default 1
```

### 10.5.11 Добавить текстовое поле

```
<?php
$GO_FIELDS['mytextfield']['name']      = 'My text field';
$GO_FIELDS['mytextfield']['input_type'] = 'text';
```

Изменено в версии 2.1.2: By adding the following argument, you can tell the plugin that this field can be automatically generated when using a template:

```
<?php
$GO_FIELDS['mytextfield']['autoname'] = true;
```

### 10.5.12 Добавить Да/Нет поле

```
<?php
$GO_FIELDS['mybooleanfield']['name']   = 'My boolean field';
$GO_FIELDS['mybooleanfield']['input_type'] = 'bool';
```

### 10.5.13 Добавить поле с датой

```
<?php
$GO_FIELDS['creationdate']['name']     = $LANG['genericobject']['fields'][30];
$GO_FIELDS['creationdate']['input_type'] = 'date';
```

### 10.5.14 Добавить поле с датой и временем

```
<?php
$GO_FIELDS['creationdate']['name']     = $LANG['genericobject']['fields'][30];
$GO_FIELDS['creationdate']['input_type'] = 'datetime';
```

**Примечание:** If you don't want a field to be modified using massive actions, add the following line to its definition:

```
<?php
$GO_FIELDS['myfield']['massiveaction'] = false;
```

## 10.6 Добавить глобальные поля

To make your fields accessible to all itemtypes:

- Create a file named `<GLPI_ROOT>/files/_plugins/genericobject/fields/field.constant.php`
- Put your definitions in this file.

## 10.7 Setup Rights

You can define access rights for each object's type, for each profile. Available options are:

- *right on the type: no access, read, write.*
- *right to associate this type of object to tickets: yes, no.*

To associate the rights you can either:

- Use the *Rights* tab in the *itemtype* form.
- Navigate to *Administration > Profiles* and administer the rights for each profile.

## 10.8 Use the new field

Activate the new type, it's now ready to be used.

The new type is available for users in the *Plugins > Objects management* menu.

## 10.9 Use case of Generic Object as a CMMS

### 10.9.1 Purpose of this documentation

Showing a complete usage of Generic Object as a CMMS (Computerized Maintenance Management System) in biomedical environment.

At the end of this use case, you will have :

- a dedicated *Biomed* entity (under *Root entity*)
- containing *Biomedical* objects (in *Assets* menu)
- with built-in and user-defined fields
- manages by users with *Admin\_biomed* profile

## 10.9.2 Steps

Following steps assume you have a Super-Admin authorization :

- Installing Generic Object on GLPI (validated with genericobject >= 0.85-1.0 and GLPI >= 0.90)
- Generic Object configuration
- GLPI configuration
- Start using Generic Object and GLPI

## 10.9.3 Installing Generic Object on GLPI

See *Установить плагин* section.

## 10.9.4 Generic Object configuration

### Create your type of object

See *Создать новый тип объекта* section and use *biomedical* as internal identifier. Label will be set automatically to *Biomedical* (with an uppercase *B*).

After a logoff/login, you will see *Biomedical* menu in Assets.

### Define Biomedical's new fields

These fields will be usable only by Biomedical's objects :

- Create a new file named : <GLPI\_ROOT>/files/\_plugins/genericobject/fields/biomedical.constant.php
- Add following content :

```
<?php
global $GO_FIELDS, $LANG;

// CODE CNEH
$GO_FIELDS['plugin_genericobject_cnehcodes_id']['name']      = $LANG['genericobject']['[
→ 'PluginGenericobjectBiomedical'] [1];
$GO_FIELDS['plugin_genericobject_cnehcodes_id']['field']     = 'cnehcode';
$GO_FIELDS['plugin_genericobject_cnehcodes_id']['input_type'] = 'dropdown';

// REFORME (yes or no)
$GO_FIELDS['reformed']['name']      = $LANG['genericobject']['[
→ 'PluginGenericobjectBiomedical'] [2];
$GO_FIELDS['reformed']['input_type'] = 'bool';

// CLASSE CE (3 choix possibles 1,2a ou 2b)
$GO_FIELDS['plugin_genericobject_classeces_id']['name']      = $LANG['genericobject']['[
→ 'PluginGenericobjectBiomedical'] [3];
$GO_FIELDS['plugin_genericobject_classeces_id']['field']     = 'classce';
$GO_FIELDS['plugin_genericobject_classeces_id']['input_type'] = 'dropdown';
```

(continues on next page)

(продолжение с предыдущей страницы)

```

// UF (Unité Fonctionnelle)
$GO_FIELDS['plugin_genericobject_ufs_id']['name']      = $LANG['genericobject']['
↳ 'PluginGenericobjectBiomedical'] [4];
$GO_FIELDS['plugin_genericobject_ufs_id']['field']    = 'uf';
$GO_FIELDS['plugin_genericobject_ufs_id']['input_type'] = 'dropdown';

// PRESTATAIRE BIOMED
$GO_FIELDS['plugin_genericobject_prestataires_id']['name']      = $LANG['genericobject
↳ 'PluginGenericobjectBiomedical'] [5];
$GO_FIELDS['plugin_genericobject_prestataires_id']['field']    = 'prestataire biomed';
$GO_FIELDS['plugin_genericobject_prestataires_id']['input_type'] = 'dropdown';

// TYPE D'EQUIPEMENT BIOMED
$GO_FIELDS['plugin_genericobject_typedequipementbiomeds_id']['name']      = $LANG[
↳ 'genericobject'] ['PluginGenericobjectBiomedical'] [6];
$GO_FIELDS['plugin_genericobject_typedequipementbiomeds_id']['field']    = "type d
↳ 'equipement biomed";
$GO_FIELDS['plugin_genericobject_typedequipementbiomeds_id']['input_type'] = 'dropdown';

// Criticite
$GO_FIELDS['plugin_genericobject_criticités_id']['name']      = $LANG['genericobject'] [
↳ 'PluginGenericobjectBiomedical'] [7];
$GO_FIELDS['plugin_genericobject_criticités_id']['field']    = 'criticite';
$GO_FIELDS['plugin_genericobject_criticités_id']['input_type'] = 'dropdown';

// Numéro marquage CE
$GO_FIELDS['plugin_genericobject_marquageces_id']['name']      = $LANG['genericobject'] [
↳ 'PluginGenericobjectBiomedical'] [8];
$GO_FIELDS['plugin_genericobject_marquageces_id']['field']    = 'marquagece';
$GO_FIELDS['plugin_genericobject_marquageces_id']['input_type'] = 'dropdown';

// Classe électrique
$GO_FIELDS['plugin_genericobject_classeelec_id']['name']      = $LANG['genericobject'] [
↳ 'PluginGenericobjectBiomedical'] [9];
$GO_FIELDS['plugin_genericobject_classeelec_id']['field']    = 'classeelec';
$GO_FIELDS['plugin_genericobject_classeelec_id']['input_type'] = 'dropdown';
?>

```

**Предупреждение:** Trailing `s_id` is mandatory in `[plugin_genericobject_field*s_id*]` because the GLPI framework requires foreign key fields to end with `s_id`. In database, `glpi_plugin_genericobject_fields` is table name and `id`, its foreign key. See GLPI developer documentation.

## Define fields labels

See *Edit labels* section.

- Edit your locales file, for example : <GLPI\_ROOT>/files/\_plugins/genericobject/locales/biomedical/biomedical.fr\_FR.php
- Add following content at the end of file :

```
<?php
// Fields
$LANG['genericobject']['PluginGenericobjectBiomedical'][1]="Code CNEH";
$LANG['genericobject']['PluginGenericobjectBiomedical'][2]="Réformé";
$LANG['genericobject']['PluginGenericobjectBiomedical'][3]="Classe CE";
$LANG['genericobject']['PluginGenericobjectBiomedical'][4]="UF";
$LANG['genericobject']['PluginGenericobjectBiomedical'][5]="Prestataire Biomed";
$LANG['genericobject']['PluginGenericobjectBiomedical'][6]="Type d'équipement biomed";
$LANG['genericobject']['PluginGenericobjectBiomedical'][7]="Criticité";
$LANG['genericobject']['PluginGenericobjectBiomedical'][8]="Marquage CE";
$LANG['genericobject']['PluginGenericobjectBiomedical'][9]="Classe électrique";
```

## Define behaviours

In *Plugins > Objects management* menu, on *Main* tab, select :

- *Item in the dustbin*
- *Historical*
- *Financial and administratives information*
- *Documents*
- *Global search*
- *Assistance*
- *Templates*
- *Contracts*
- *Global search*

This will add ready to use fields to your type of object.

## Add fields to your type of object

In *Plugins > Objects management* menu, on *Fields* tab, you can now add fields to Biomedical type of object :

- ready to use fields (GLPI's built-in fields)
- new fields (defined in *Define Biomedical's new fields* section)

## 10.9.5 GLPI configuration

### Define Admin\_biomed profile

1. Clone *Admin* profile
2. Set following rights in *Admin\_biomed* profile :
  - *Administration > Profiles > Admin\_biomed > Assets tab > Unselect all*
  - *Administration > Profiles > Admin\_biomed > Assistance tab > Association > Associable items to a ticket > Biomedical*
  - *Administration > Profiles > Admin\_biomed > Management tab > Select all*
  - *Administration > Profiles > Admin\_biomed > Objects management tab > Biomedical > Select all*

---

**Примечание:** With these settings, *Admin\_biomed* users only see *Biomedical* in Assets menu.

---

### Define Biomed entity and authorizations rules

1. Create *Biomed* entity under *Root entity* in *Administration > Entities*
2. Configure authorizations rules to assign *Admin\_biomed* profile to *Biomed* entity users.

## 10.9.6 Start using Generic Object and GLPI

As *Admin\_biomed* user, you can create your first object in *Assets > Biomedical*.

In order to gain time, define values in *Setup > Dropdowns > Objects management* for new fields.

## 10.10 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

---

---

Download	Sources
<a href="https://github.com/pluginsGLPI/news/releases">https://github.com/pluginsGLPI/news/releases</a>	<a href="https://github.com/pluginsGLPI/news">https://github.com/pluginsGLPI/news</a>

## 11.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 11.2 Features

This plugin allows to display alerts messages on GLPI homepage and / or login page.

- Create alert with rich text as for notes.
- Choice of begin/end publication date.
- Manage alerts by entity.
- Target : display alerts by profile / group / user.

## 11.3 Install the Plugin

- Uncompress the archive.
- Move the `news` directory to the `<GLPI_ROOT>/plugins` directory
- Navigate to the *Configuration > Plugins* page,
- Install and activate the plugin.

## 11.4 Usage

The plugin will create required tables in the database automatically. Those tables will be updated along with the plugin.

Plugin usage is quite simple:

- configure alerts

You will access the plugin configuration from the *Tools > Alerts*.

## 11.5 Create alerts

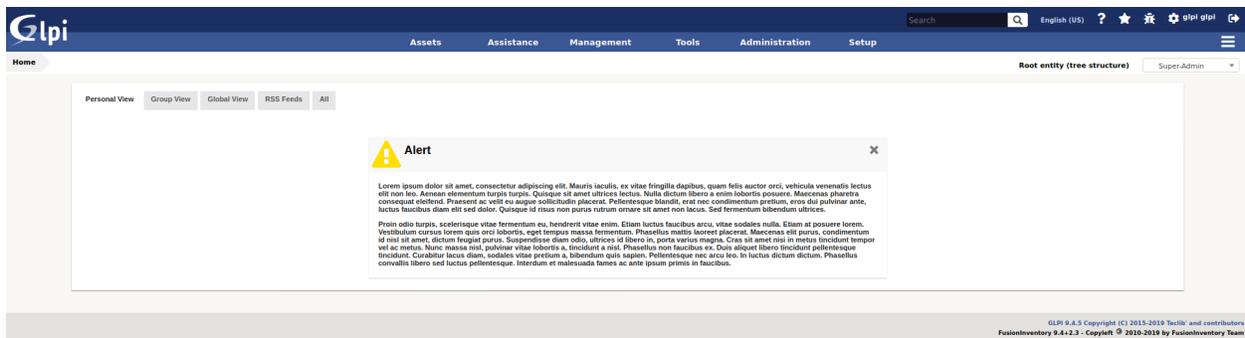

- Name : display as talert title
- Active : is active or not
- Description : content of alert
- Visibility start / end : period of Visibility
- Type : type of alert (General, Information, Warning, Problem)
- Can close alert : User can close alert ?
- Show on login page : display or not alert on login page
- Show on helpdesk page : display or not alert on helpdesk page
- Sub-entity : display or not on sub-entity

## 11.7 Display on login page

## 11.8 Display on helpdesk page

## 11.9 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

Download	Sources
<a href="https://github.com/pluginsGLPI/oauthimap/releases">https://github.com/pluginsGLPI/oauthimap/releases</a>	<a href="https://github.com/pluginsGLPI/oauthimap">https://github.com/pluginsGLPI/oauthimap</a>

---

**Примечание:** Microsoft is gradually removing the TLS 1.0 and 1.1 protocols for all Microsoft 365 applications. In order to keep your collector running, you need to add the **OAuth IMAP** plugin, which is available in the marketplace.

---

---

**Совет:** The OAuth tokens for the collector, retrieved during authentication with Azure by the OAuthIMAP plugin, are “offline” tokens that delegate authorisation to a third-party application (GLPI). These tokens provide a renewal code that will be used by the application to renew them automatically without user intervention. You will therefore not be asked to re-authenticate after the 1st authorisation request.

---

## 12.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in [Cloud](#)

---

## 12.2 Supported mail services

OAuth IMAP support :

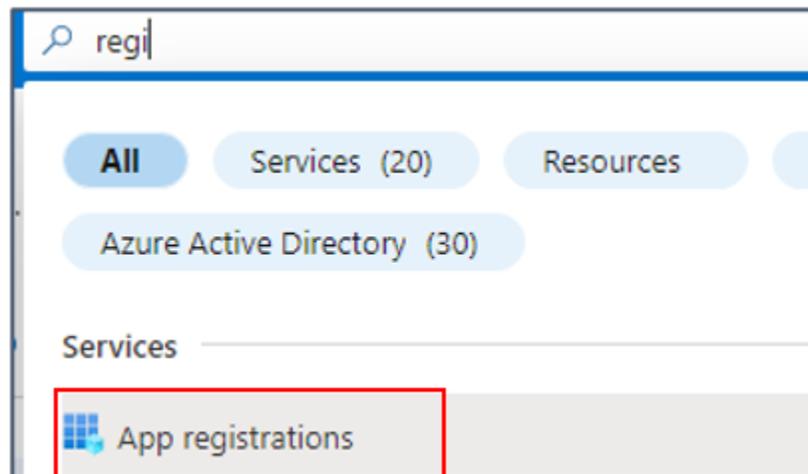

- Gmail : <https://developers.google.com/gmail/imap/xoauth2-protocol?hl=fr>
- Entra : <https://learn.microsoft.com/fr-fr/power-platform/admin/connect-gmail-oauth2>

## 12.3 Install the plugin

- Go to the marketplace. Download Oauth IMAP and enable it

- Open the Azure Portal for your tenant
- In the search box type **registration**
- then select **App registrations**

Here are the configuration steps including configuration phases on the Entra side.

## 12.4 Register your Entra application

### 12.4.1 Create the application

- Click on **New registration**
- Enter the desired name, select the type of account supported then enter the redirection URL (present in the configuration of the plugin from your GLPI interface: <https://XXXXXXXXXXXXXXXXX/marketplace/oauthimap/front/authorization.callback.php>) specifying the **Web** option

- Then click on **Register**.

### New registration

#### Register an application ...

**\* Name**  
The user-facing display name for this application (this can be changed later).

 ✓

Supported account types

Who can use this application or access this API?

Accounts in this organizational directory only (TECLIB only - Single tenant)  
 Accounts in any organizational directory (Any Azure AD directory - Multitenant)  
 Accounts in any organizational directory (Any Azure AD directory - Multitenant) and personal Microsoft accounts (e.g. Skype, Xbox)  
 Personal Microsoft accounts only

[Help me choose...](#)

Redirect URI (optional)  
We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be changed later, but a value is required for most authentication scenarios.

  ✓

Register an app you're working on here. Integrate gallery apps and other apps from outside your organization by adding from [Enterprise applications](#).

### 12.4.2 Add a secret

- In the **Certificates and secrets** tab
- Click on **Client secrets**
- Then **New client secret**

### Certificates & secrets

Certificates (0) Client secrets (0) Federated credentials (0)

A secret string that the application uses to prove its identity when requesting a token. Also can be referred to as application password.

+ New client secret

Description	Expires	Value ⓘ	Secret ID
No client secrets have been created for this application.			

- Enter a description and then an expiration date
- A secret **value** is then generated. Keep this value well because once you have left this page, it will no longer be recoverable
- Return to the **Overview** tab and **copy** the following values and the secret seen above

Description	Expires	Value ⓘ
Auth IMAP	11/2/2024	-Bd8Q~HrbiuYXbXhSTkhO2SJBjtzfL4dfP...

^ Essentials

Display name : [AUTH IMAP Office365](#)

Application (client) ID : f3767743-3406-4dfb-9c5e-300cbde1488d

Object ID : 466228e5-c787-4dca-b753-47a9bd68362c

Directory (tenant) ID : 3c2ae853b-7e7b-48c8-bd8d-1ba9027283d

Supported account types : [Multiple organizations](#)

## 12.5 Setup GLPI

- Now go back to your GLPI interface **Setup > Application Aouth IMAP** and indicate the information collected previously :

Name  Comments

Active Yes ▾

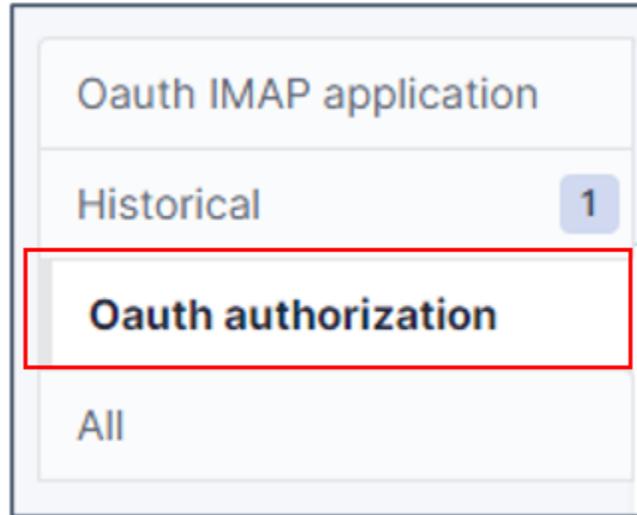

Client ID  Oauth provider Azure ?

Tenant ID  Client secret

Callback url

+ Add

- Click **Add**
- Now in the **Oauth authorization** tab, click **Create an authorization**
- When you click on **Create authorization**, you will be redirected to the Microsoft services sign-in page
- Enter the email address and password of the account that will be used for the collector
- You will also need to accept the necessary permissions related to the plugin.

## 12.6 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

collecteur-mail@

## Autorisations demandées

<a href="https://github.com/pluginsGLPI/order/releases">https://github.com/pluginsGLPI/order/releases</a>	<a href="https://github.com/pluginsGLPI/order">https://github.com/pluginsGLPI/order</a>

## 13.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud

---

## 13.2 Features

This plugin supports the following aspects of order management :

- Definition and management of a catalogue of product references
- Order management (with approval workflow)
- Budgets management
- Management of invoices associated with orders

## 13.3 Install the Plugin

- Uncompress the archive.
- Move the `order` directory to the `<GLPI_ROOT>/plugins` directory
- Navigate to the *Configuration > Plugins* page,
- Install and activate the plugin.

## 13.4 Configuration

You will access the plugin configuration from the *Setup > Plugins > Orders managment*.

When the plugin is installed and enabled, the following options are available:

Setting	Control
Default VAT	No VAT
Use validation process	No
Order generation in ODT	No
Activate suppliers quality satisfaction	No
Display order's suppliers informations	No
Color to be displayed when order due date is overtaken	Color picker (red)
Copy order documents when a new item is created	No
Default heading when adding a document to an order	-----
Author group (Default values)	-----
Recipient group (Default values)	-----
Recipient (Default values)	-----
Do not display expired budgets	No
Transmit budget change to linked assets	No
Display account section on order form	No
Set account section as mandatory on order form	No
Use free references	No
Rename documents added in order	No

- **Default VAT:** indicates the amount of VAT that will be proposed by default in the plugin
- **Use the validation process:** indicates whether the full validation circuit should be used, or whether anyone can validate applications.
- **Purchase order generation:** indicates if the tab allowing the generation of a purchase order in ODT format is displayed or not.
- **Enable supplier quality:** indicates whether the tab for judging supplier satisfaction is displayed once the order is delivered.
- **Display purchase order vendor information:** Shows whether or not the tab for storing the reference and vendor purchase order number is displayed.
- **Colour when the estimated delivery date is exceeded:** colour of display in the search engine of an undelivered order for which the estimated delivery date is exceeded

- Copy order documents when a new item is created : Copy order documents to generated item
- Default heading when adding a document to an order : define default heading
- Author group (Default values) : Define default author
- Recipient group (Default values) : Define default Recipient group
- Recipient (Default values) : Define default Recipient
- Do not display expired budgets : yes or no
- Transmit budget change to linked assets : yes or no
- Display account section on order form : yes or no
- Set account section as mandatory on order form : yes or no
- Use free references : yes or no
- Rename documents added in order :yes or no

### 13.4.1 Automatic actions when delivery Item

Automatic actions when delivery	
Item	
Display analytic nature on item form	No ▾
Set analytic nature as mandatory on item form	No ▾
Enable automatic generation	No ▾
Default state	----- ▾ ⓘ
Add order location to item	No ▾
Add billing details to item	No ▾

Generation does not apply to contracts, cartridges and consumables. In order to activate this feature, change the option Activate automatic generation to yes and validate. During the generation, the material will be created with some randomly generated information:

- Default name
- Default Serial Number
- Default inventory number
- If a template is associated with the part number, and in this template the name and serial number are generated, then the settings defined above for these 2 fields do not apply.

The default status will be set when the material is created. The positioning of the status during the creation of the material can lead to a date filling of the financial information. See the Entity Inventory tab.

## 13.4.2 Order lifecycle

You can define your own status for order lifecycle

Order lifecycle	
State before validation	----- ▼ ⓘ
Waiting for validation state	----- ▼ ⓘ
Validated order state	----- ▼ ⓘ
Order being delivered state	----- ▼ ⓘ
Order delivered state	----- ▼ ⓘ
Order paid state	----- ▼ ⓘ
Canceled order state	----- ▼ ⓘ

## 13.5 Creation of a reference catalogue

You will access the reference catalogue from the *Management > Orders > Products references*.

The creation of product references is the prerequisite for order management. Any product to be ordered must be referenced in the plugin catalog. When creating a product reference, the following fields must be filled in:

- Sub-entities: indicates if the reference will be visible in the current entity only or in the sub-entities as well.
- Name: name of the reference, as it will be displayed when managing an order (required)
- Manufacturer: the manufacturer of the product (not the supplier)
- Type of equipment: indicates what type of equipment we are dealing with
- Type: the type of the product
- Model: the model of the product
- Template: the GLPI template of the product if one already exists.
- comments: additional information on the reference
- Once the reference is created, it is then necessary to indicate from which supplier(s) the product is available, as well as the price associated with it.

It is also possible to :

- Add related documents
- View history

## 13.6 Creating an order

You will access orders from the *Management > Orders > Orders*.

The screenshot shows the GLPI interface for viewing an order. The breadcrumb trail is *Home > Management > Orders > Orders*. The main content area displays the details for a 'Phone Device (Root entity)' order. The order information includes:

- Order name\*: Phone Device
- Order number\*: DFG46654DUJD
- Date of order: 2020-01-27
- Order status: Type
- Budget: 2019-2020
- Delivery location: Payment conditions:
- Supplier: Samsung
- Contact: VAT Postage: 0.00
- Associate to a ticket: No
- VAT Postage: 20
- Estimated due date: 2020-01-27
- Delivery date: 2020-01-27

Comments: Last update on 2020-01-27 10:22

Actor		Cost	
Author: glpi	Author group:	Price tax free	5 659.20
Recipient:	Recipient group:	Price tax free with postage	5 659.20
		Price ATI	6 791.04
		VAT	1 131.84

Cost summary: Last update on 2020-01-27 10:22

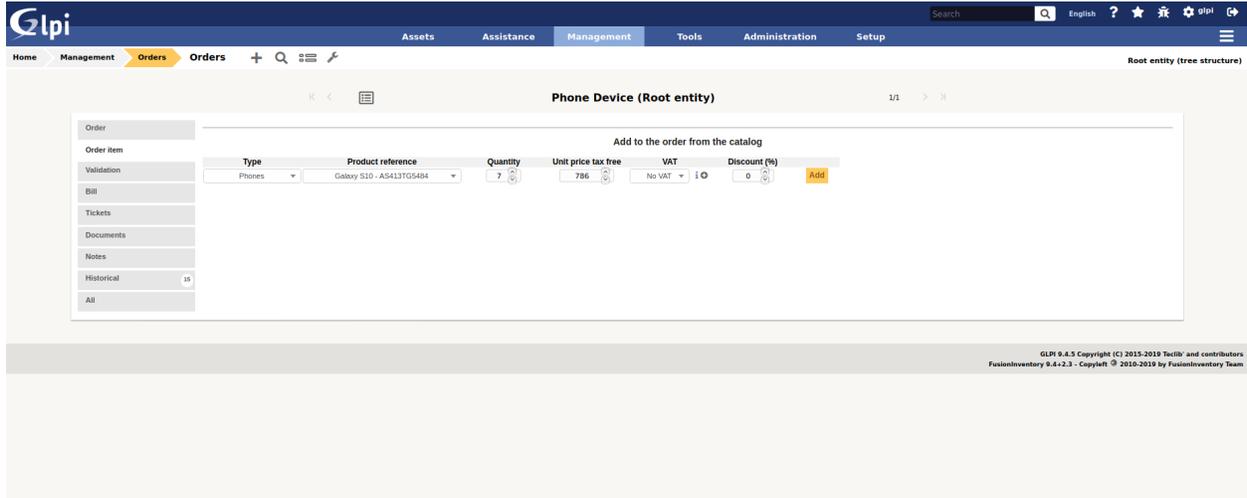

Once the reference catalogue has been created, it is now possible to add material orders. The fields to be filled in are :

- Sub-entities: indicates if the order is visible in the sub-entities
- Order name
- Order number (required)
- Date of order (required)
- Budget: The budget to which the purchase order is posted.
- Vendor purchase order number: Indicates the internal number for the purchase order at the vendor.
- Payment terms: free field (can contain for example 30 days end of month, 60 days end of month, etc)
- Billing number
- Supplier: the supplier with whom the order is placed. Only the catalogue references from this supplier may be added to the order.
- Place of delivery of the order: indicates the place where the equipment will be delivered. This option has value only in the entity in which the order is created.
- Description: description of the order
- Status: Indicates the current status of the purchase order in the release run.
- Estimated delivery date: indicates the indicative date by which the supplier must deliver the order.

It is also possible to :

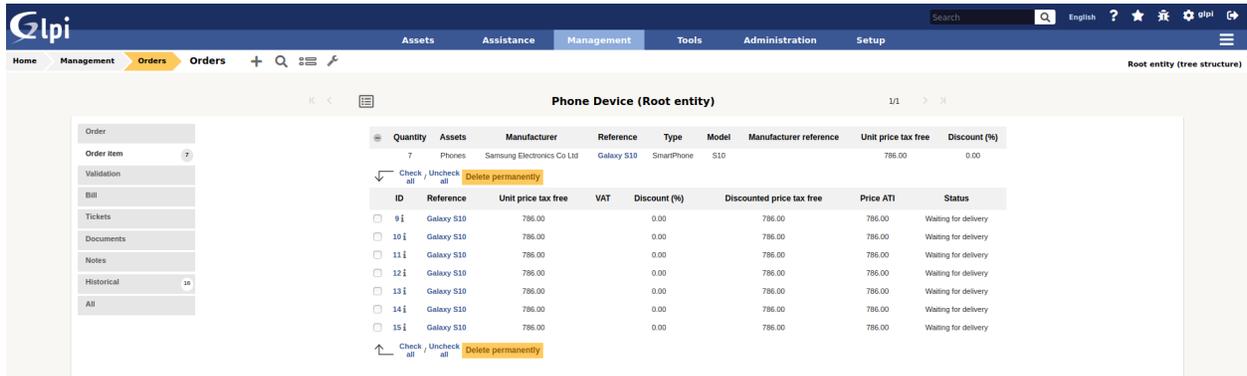

- Define author and recipient

### 13.6.1 Adding articles

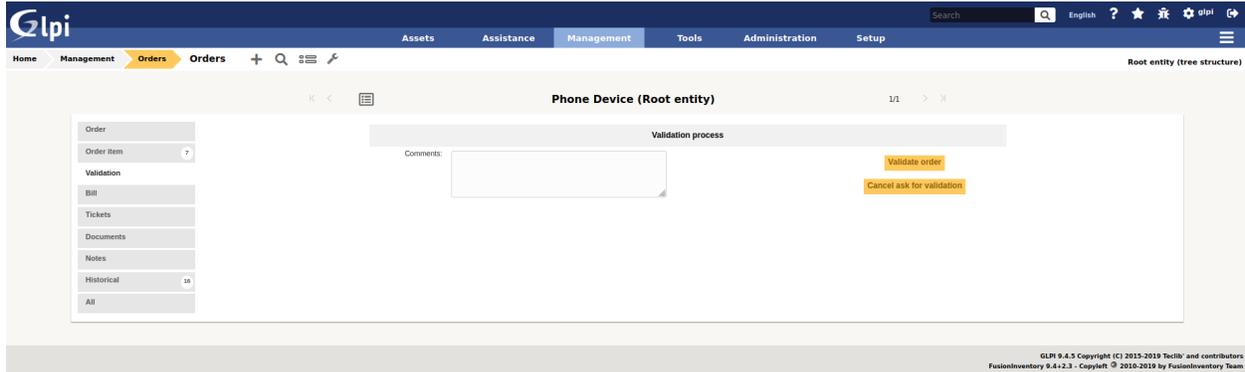

In the Details tab, it is now possible to add products to the order.

- Select the type of material to add to the order
- Select product number
- Indicate the quantity to order
- Change the unit price if it is not the price indicated in the product reference.
- Indicate the percentage discount on products
- You can then validate the addition of these products to the order.

Note: it is possible to modify the price and the discount of a set of materials when the order is being edited. To do this, simply double-click on one of these 2 fields, modify its value and then validate the change.

## 13.6.2 Validation workflow

The plugin has a validation workflow that works as follows:

- Creating the order: status In progress
- Request for order release: status Pending approval
- Order confirmed: the order then goes to the status In process of delivery.
- Order completely received: automatic switch to Delivered status
- Cancelled purchase order: Change to status Cancelled

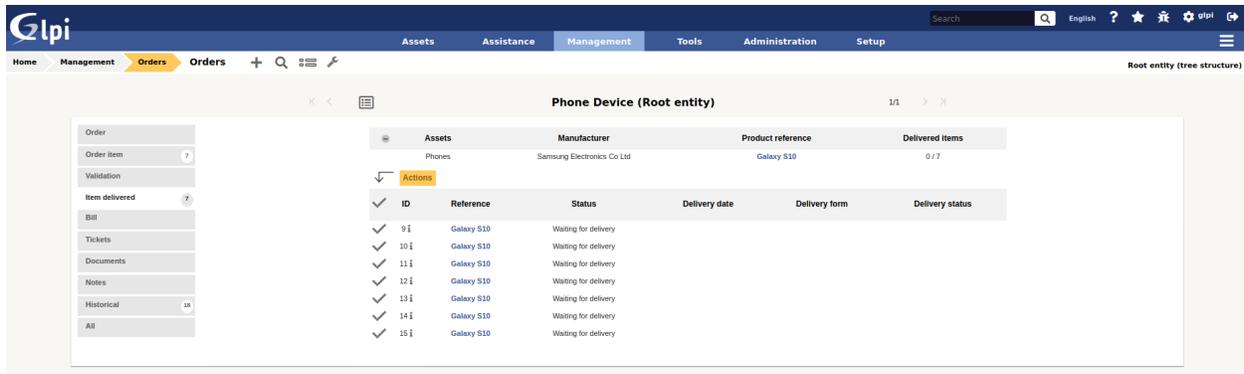

The definition of the persons having the right to make a validation request, to validate or to cancel an order is done in the edition of the profiles.

## 13.6.3 Receiving the order

Once the order has been confirmed, the equipment can begin to be received. To do this, you must go to the Receiving Equipment(s) tab. Each product is identified by a line with the following information:

- Product reference
- Number of equipment(s) received
- Number of material(s) related to inventory items in GLPI
- Unit price of the product (excl. VAT)
- Unit price of the product (incl. VAT)
- Price per unit awarded (excl. VAT)

By clicking on the + icon on the left of the line, it is possible to access the details of the products ordered.

### 13.6.4 Receiving material

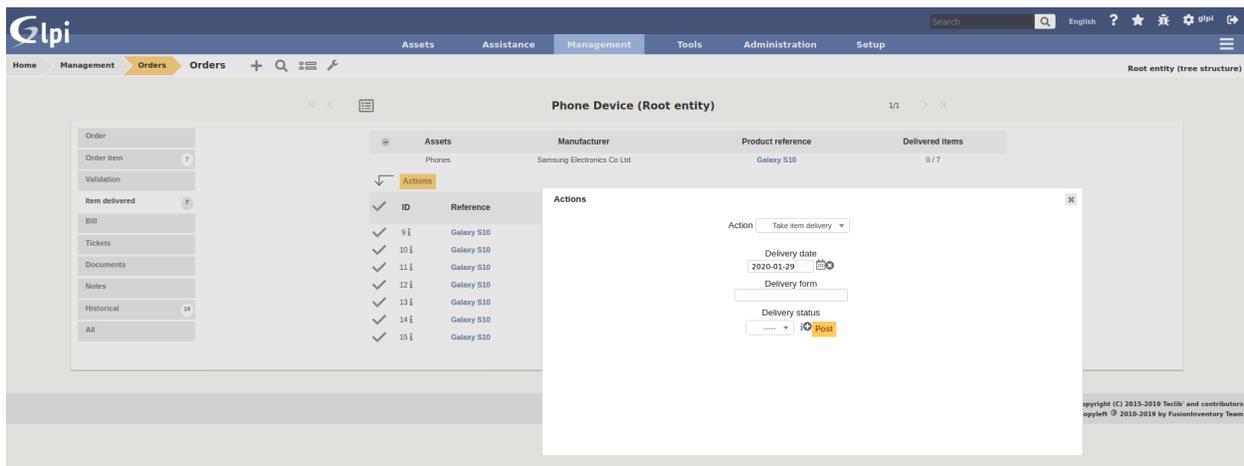

It is possible to receive the material that has been ordered, from the moment the order is validated. You have to go to the tab Reception of material(s). One line is displayed for each product reference ordered. This line contains the following information:

- Product reference
- Received equipment(s): indicates the number of equipment received out of the total number of equipment ordered for this product.
- Related equipment(s): number of goods received related to inventory items in GLPI
- Price per unit (excl. VAT)
- Unit price (incl. VAT)
- Price per unit awarded (excl. VAT)

In order to proceed to the reception of products, just click on the + icon on the left of the line.

There are 2 ways to receive material :

- Reception of materials selected from the list of products ordered but not yet received
- Receipt of materials in bulk: in this case we will indicate how many products are received (without first selecting from the list).

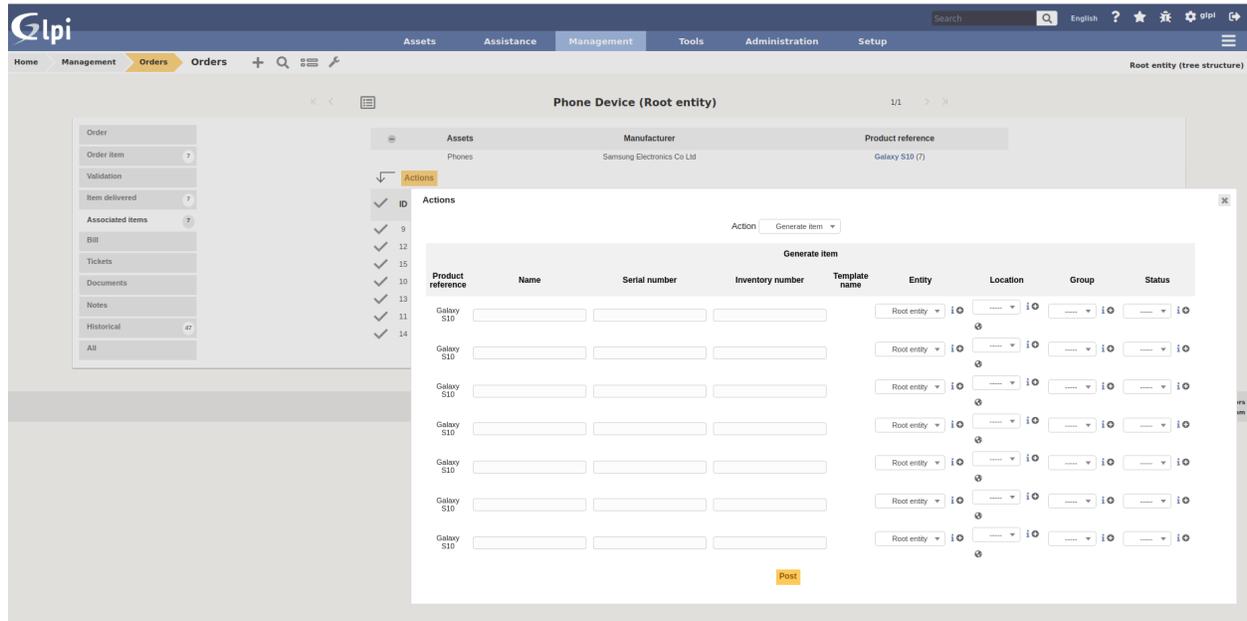

In both cases, it is necessary to return the delivery note associated with the reception of the material. Alternatively, a status of the received objects can be indicated (e.g. Conforming, Non-conforming, etc).

Once received, it is possible to :

- Generate a material in GLPI from the received product
- Link the product received to existing GLPI equipment

### 13.6.5 Generate the material

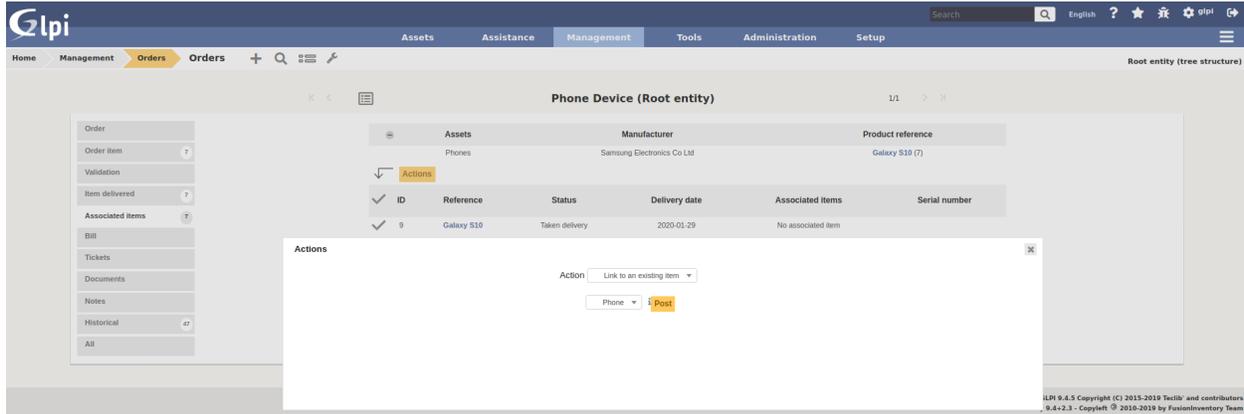

In order to generate materials from received products, simply select from the list those for which this operation is to be performed. Then select the Generate associated material option. A screen will appear. Each line represents a received product, and the following information must be given:

- Name of the material generated in GLPI
- Serial code
- Asset number

Note:

- If there is a template associated with the reference of the generated product, and if the latter is created in the same entity as the reference, then the inventory object in GLPI will be created from this template.
- The financial information of the order will be carried in the newly created inventory object.

### 13.6.6 Link to an inventory item

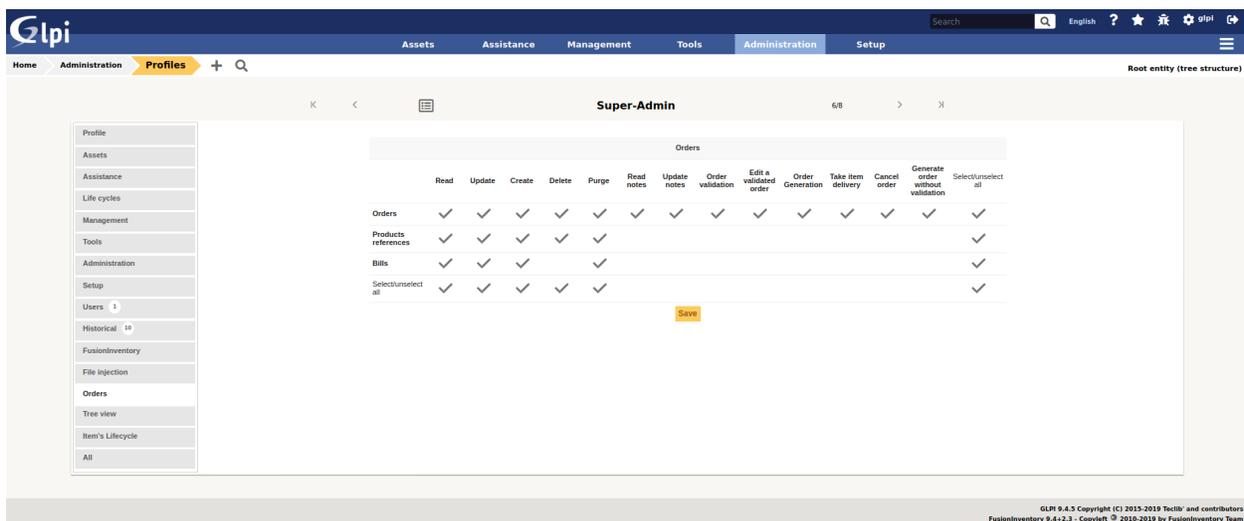

It is possible not to generate a received product, but to link it to material already present in GLPI. To do this, you must select the option Link to an existing material. A drop-down list will appear and will present all the materials present in GLPI which :

- Are in the entity of the order (or in a sub-entity if the order is visible in the sub-entities)
- With the same type of equipment
- With the same type of equipment
- Identical

Once linked to a product, the material in GLPI will receive the financial information from the order.

## 13.7 Rights management

The plugin rights management allows to define, by profile, if the user has the right to :

- Manage commands
- Manage product references
- Manage invoices

- Confirm an order
- Cancel an order
- Modify a validated order

## 13.8 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

## 14.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud.

## 14.2 Install the plugin

- Go to the marketplace. Download and install the plugin **PDF**

## 14.3 Set up the plugin

- From **Setup** > **General** > **Print to pdf**, select :
  - your preferred currency
  - Any text that will be displayed on the PDF.

## 14.4 Using the plugin

**Примечание:** Printing a contract and its related elements

- From **Management** > **Contracts**, select the contract you require
- From the **Print pdf** tab
- Click on **Print**

**Contracts - Maintenant 10/5 (Entité racine)**

<a href="https://github.com/pluginsGLPI/sccm/releases">https://github.com/pluginsGLPI/sccm/releases</a>	<a href="https://github.com/pluginsGLPI/sccm">https://github.com/pluginsGLPI/sccm</a>

## 15.1 Requirements for latest version

This plugin requires :

- PHP 7.2 or higher
- GLPI  $\geq$  9.4
- FusionInventory plugin for GLPI
- SCCM  $\geq$  1802
- PHP curl\_init and sqlsrv\_connect
- Microsoft System Center Configuration Manager
- Microsoft Drivers for PHP for Microsoft SQL Server

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is not available in Cloud

---

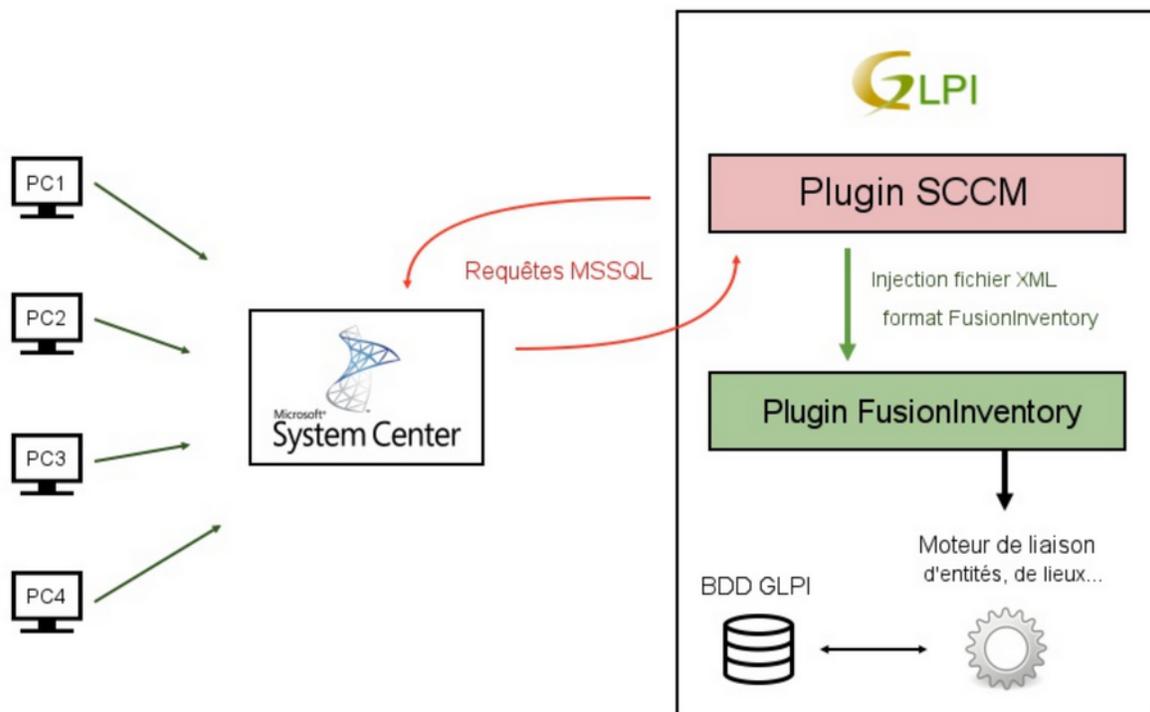

## 15.2 Features

Plugin to synchronize computers from SCCM (version 1802) to GLPI (version 9.3 and 9.4). It uses the «FusionInventory for GLPI» plugin and the power of its internal engine.

## 15.3 Workflow

- This plugin add two automatic actions : «SCCMCollect» et «SCCMPush»
- The automatic action «SCCMCollect» queries the SCCM server with MsSQL queries.
- This same action builds an XML foreach computer (in FusionInventory format).
- The automatic action «SCCMPush» injects XML files into GLPI over HTTP(s) (via cURL and FusionInventory) to display computer in GLPI.

## 15.4 Schematic diagram

## 15.5 Collected data

Depending on data availability in the SCCM server, foreach computer we collect:

- Computer: name, last connected user, UUID, user login, domain, comments, serial
- Operating system: name, architecture, version, service pack
- BIOS information: tag, model, type, manufacturer, serial, install date, version
- CPU: description (or name), manufacturer, frequency, type (arch), nb core, nb threads
- Softwares: name, version, editor, install date
- Memory (RAM): capacity, decription, frequency, type, bus, serial
- Graphical card: name, chipset, memory
- Sound card: name, manufacturer
- Network card: name, MAC address, IP address (v4, v6)
- Disk part: name, mount type, total size

## 15.6 Automatic actions

Home > Setup > Automatic actions + 🔍

<input type="checkbox"/>	SCCMCollect	SCCM
<input type="checkbox"/>	SCCMPush	SCCM
<input type="checkbox"/>	Name	Item type

### 15.6.1 SCCMCollect

Action to collect data from SCCM to XML files.

### 15.6.2 SCCMPush

Action to push XML file to FusionInventory plugin

Download	Sources
<a href="https://github.com/pluginsGLPI/treeview/releases">https://github.com/pluginsGLPI/treeview/releases</a>	<a href="https://github.com/pluginsGLPI/treeview">https://github.com/pluginsGLPI/treeview</a>

## 16.1 Requirements for latest version

## 16.2 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in [Cloud](#)

---

## 16.3 Features

This plugin allows you to browse through your inventory via a tree view in a panel located on the left side of the screen.

You can browse the tree of your site to see the equipment.

## 16.4 Install the Plugin

- Uncompress the archive.
- Move the `tag` directory to the `<GLPI_ROOT>/plugins` directory
- Navigate to the *Configuration > Plugins* page,
- Install and activate the plugin.

## 16.5 Usage

The plugin will create required tables in the database automatically. Those tables will be updated along with the plugin.

Plugin configuration is quite simple:

You will access the create form from the *Setup > Plugins > treeview*.

- Target for all node : on clic on node, redirect to new window
- Nodes can be highlighted : highlight selcted node or not
- Tree is drawn with lines : display or not
- Tree is drawn with icons : Display or not icon for node
- Only one node within a parent can be expanded at the same time : more tthan one parent node can be expand at same time
- Item name : name or inventory number or name + inventory number or inventory number + name
- Location name : short name or long name or long name + comment or long name + comment

<a href="https://github.com/pluginsGLPI/tag/releases">https://github.com/pluginsGLPI/tag/releases</a>	<a href="https://github.com/pluginsGLPI/tag">https://github.com/pluginsGLPI/tag</a>

## 17.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** This plugin is available without a GLPI-Network subscription. It is also available in Cloud.

---

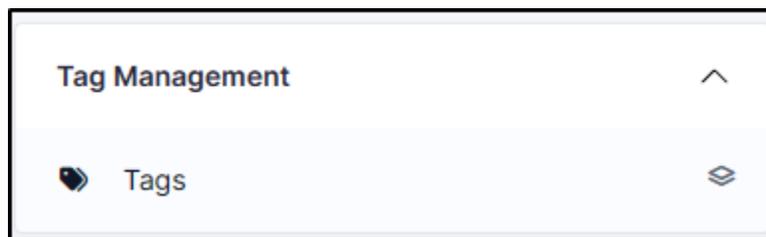

## 17.2 Install the plugin

- Go to the marketplace. Download and install the plugin “**Tag**”.

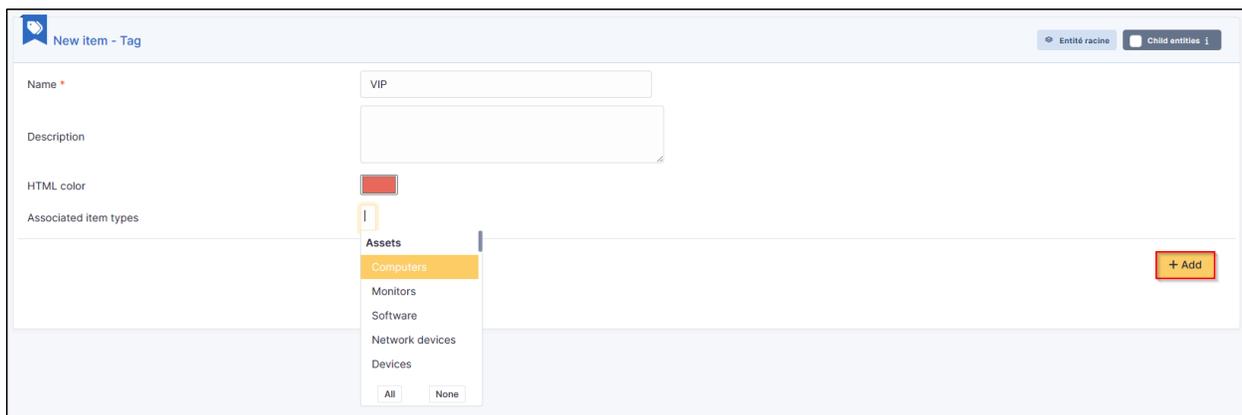

## 17.3 Setting up the plugin

- From **Setup** > **Dropdowns**
- Click on **Tag management**
- Then **Tags**

- Enter a name that will be visible when tags are added
- Enter a description (optional)
- Add a colour
- Associate one or more elements. If nothing is ticked, it will not be visible in any element by default.

### 17.3.1 Choose where to find the tag

You can indicate whether the tag should be at the top or bottom of the list.

- From **Setup > General > Tag management**, specify the tag location.

Bottom :

Top:

## 17.4 Adding rules

You can add business rules (tickets, computers, etc.) to add tags to particular items.

Example : Assign a VIP tag when a member of the management group writes a ticket.

- Here are the criteria to be implemented from **Administration > Rules > Business rules for tickets**
- After creating a ticket :

---

**Примечание:** Tags can, of course, be added manually if they have been set to be visible in the specified item.

---

---

## 18.2 Features

This plugin, named «uninstall» or «Item Uninstallation», allows you to remove / replace devices from the inventory by automating certain actions on the fields.

It allows to manage the different stages of the life cycle of a hardware. It has been designed, among other things, to handle the following cases:

- scrapping of equipment
- removal from inventory of temporary equipment due to breakdown
- Replacement of equipment under a warranty for example (See: Replacement Equipment Feature)

Once installed, the plugin includes :

- a rights management directly accessible from Administration -> Profiles (in the Plugins tab -> uninstall),
- a «hardware uninstall» menu in «Configuration»,
- an «uninstall» menu in the user preferences.

## 18.3 Right management

It is possible to deny access to the plugin or to allow it by specifying the read or write option on the templates.

To do this, simply go to the menu «Administration» > «Profiles», to select the profile you wish to modify, then in the «Uninstallation» tab set the following options :

- *No access*: the plugin does not appear in the menu „Plugin“.
- *Playback*: only the use of previously created templates is possible
- *Writing*: Template creation is possible.
- *Hardware replacement*: standard hardware replacement is possible

## 18.4 Uninstall feature

This functionality of the plugin „Item Uninstallation“ adds the possibility of modifying the value of certain fields and of removing the inventory of a computer of the OCS base or the cleaning of the FusionInventory tables.

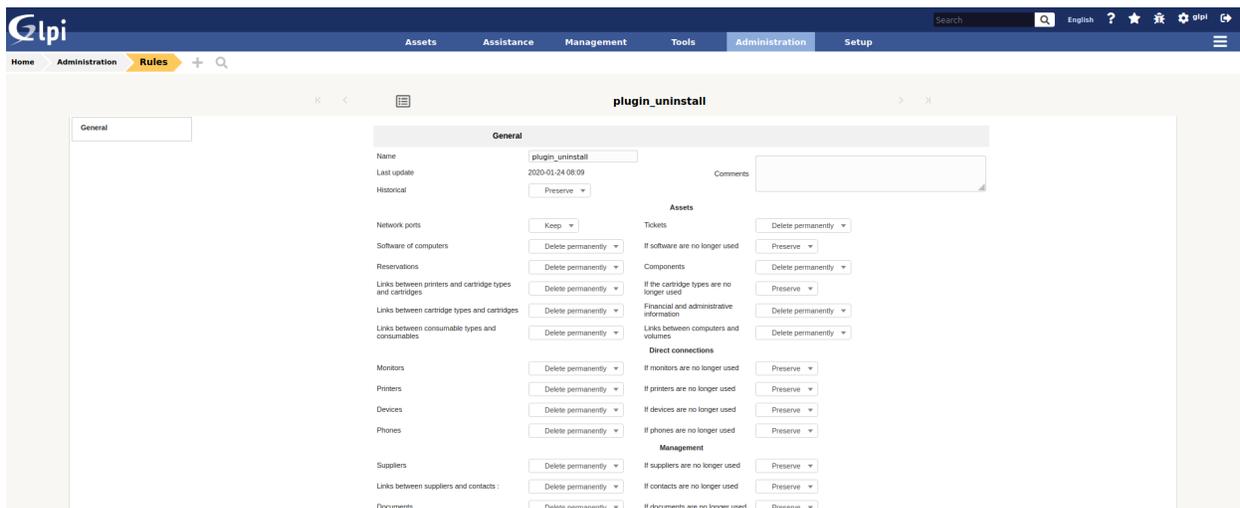

The uninstall templates can be accessed in the «Administration > Uninstall Hardware» menu.

You can create as many uninstall templates as you want. Each template can contain different features, and be visible in the sub-entities or not.

Uninstall equipment is a transfer of the equipment to itself. During its transfer, a certain number of actions are performed, as specified in the definition of transfer.

- *Name*: the name of the uninstall template
- *Sub-entities*: indicates whether the template is visible in the creation entity and its sub-entities

- *Model type*: indicates which type of model should be used (either Uninstall or Replace)
- *Comments*: free fields to add details about the model
- *Transfer template to be used*: Indicates the transfer template to be used when uninstalling the system.
- *New hardware status*: indicates which status the hardware should take once uninstalled
- *New group*: indicates the group to which the hardware can belong once uninstalled.
- *Software History Deletion* : Allows deletion of all lines in a computer's history that are relevant to software installations/uninstallations.
- *REMOVE Name* : removes the name of the hardware during uninstallation
- *RAZ Contact* : removes the contact reassembled by OCS during uninstallation
- *Network reset*: resets the «network» field of the equipment record to zero.
- *RAZ OS*: Removes OS information (OS, Version, Service Pack, Product Key, Product ID) when uninstalling.
- *RAZ domain* : removes the «domain» field from the hardware
- *Remove IP & Gateway & Hacker & Subnet*: removes network information (except for the MAC address, which is hardware-related) during uninstallation
- *Remove the machine from OCS* : when uninstalling a computer in GLPI, remove from the OCS base the corresponding machine
- *Delete FusionInventory info*: Delete all FusionInventory info for this material

## 18.5 Uninstall hardware

There are 2 possibilities to uninstall a hardware:

- from its file, in the tab «Uninstallation».
- from the massive modifications list

Since a template can be recursive (visible in the sub-entities), the list of templates displayed in the massive actions indicates all the templates available in the current entity (either those defined in this entity, or in an entity above it and visible in the sub-entities).

## 18.5.1 Change of location on uninstallation

It is possible to change the location of the hardware once it has been uninstalled. This selection is made either :

- in the hardware file, once the uninstallation model has been chosen.
- from the user's preferences for uninstallation by massive modification

It should be noted that a location is declared within an entity. It is therefore possible, depending on the current entity, to define an uninstall location.

## 18.6 Replace feature

This feature of the „Item Uninstallation“ plugin adds the possibility to replace one hardware by another.

### 18.6.1 Replacement Model Form

Replacement models are managed in the same way as uninstall models: They are accessible in the menu «Administration > Uninstall hardware». Each model can contain different characteristics, and be visible in the sub-entities or not.

In this form there are 4 tabs :

- Main: allows to display on the page only the main information of the template.
- Replacing data: displays the various actions to be performed when replacing one piece of equipment with another.
- All: displays all the tabs on the same page

The screenshot shows the GLPI web interface for the 'Replace' form. The top navigation bar includes 'Home', 'Administration', 'Item's Lifecycle', and 'Templates'. The main content area is titled 'Replace' and contains a form with the following fields and buttons:

- Template** (Section Header)
- Replacing data** (Tab)
- Historical** (Tab)
- All** (Tab)
- Name**: Replace
- Type of template**: Replacement
- New status of the computer**: None
- Comments**: (Text area)
- Add template** (Link)
- Manage templates** (Link)
- Save** (Button)
- Delete permanently** (Button)

At the bottom right, there is a small copyright notice: "GLPI 9.4.5 Copyright (C) 2015-2019 Teclib' and contributors FusionInventory 9.4+2.3 - Copyright © 2010-2019 by FusionInventory Team".

Here is the description of the fields of the main tab :

*Name*: the name of the replacement model  
*Sub-entities*: indicates whether the template is visible in the creation entity and its sub-entities  
*Model type*: indicates what type of model should be used (here we are talking about type - Replacement)  
*Comments*: free fields to add details about the model  
*New hardware status*: indicates which status the old hardware should take once it has been replaced

## 18.6.2 Replacing data tab

The screenshot shows the 'Replace' form in GLPI. The 'Informations replacement - General informations' tab is active, displaying the following fields:

- Copy Name: Yes
- Copy Serial number: Yes
- Copy Inventory number: Yes
- Overwrite informations (from old item to the new): No
- Archiving method of the old material: Delete + Comment
- Plugin PDF is not installed, you won't be able to use PDF format for archiving

The 'Informations replacement - Connections with other materials' tab is also visible, displaying the following fields:

- Copy Documents: Yes
- Copy Contract: Yes
- Copy Financial and administratives information: Yes
- Copy Reservations: Yes
- Copy User: Yes
- Copy Group: Yes
- Copy Tickets: Yes
- Copy Connections Networks: Yes
- Copy Direct connections: Yes
- Copy Alternate username: Yes
- Copy Alternate username number: Yes

The 'FusionInventory' section contains the field:

- Delete computer in FusionInventory: Yes

A 'Save' button is located at the bottom right of the form.

Here is the description of the fields of the actions tab.

### *General Information*

- *Copy name*: allows you to define if you want to copy the name of the old hardware to the new one.
- *Copy the serial number*: Allows you to define if you wish to copy the serial number of the old equipment to the new one.
- *Copy the inventory number*: allows you to define if you want to copy the inventory number of the old equipment to the new one.
- *Overwrite information* (from the old material to the new one): this option allows you to choose the behavior to adopt if one of the unique information (Reservation, Financial Information, Name, Serial, Otherserial, Entity...) is present in the old material AND in the new material : *Yes* : by selecting YES, the information in the old material will replace that in the new material. *No*: by selecting NO, the information of the new hardware will NEVER be overwritten by the information of the old hardware.

### *Method of archiving old material*

In this option, we define the behavior that the uninstall plugin must adopt with the old hardware :

- *Purge + PDF / CSV*: if you have the PDF plugin the old hardware will be purged from the GLPI database and its information will be attached to the new hardware in a PDF document. If you do not have the PDF plugin, they will be stored in CSV format.
- *Deletion + Comments*: the old hardware is put in the trash and a comment is added in each of the two hardware («This hardware has been replaced by...» and «This hardware has replaced the hardware...»).

### *Data location - Connection with other hardware*

- *Copy Documents*: Allows you to attach documents from old equipment to new equipment.
- *Copy Contracts*: allows you to attach the contracts from the old equipment to the new equipment.
- *Copy financial information*: allows you to attach financial information from the old equipment to the new equipment. Warning: if the «Overwrite information» option is activated, even if the new hardware has financial information, it will be replaced by the old hardware.
- *Copy Reservations*: Allows you to attach the reservations made on the old equipment to the new equipment. Attention: same remark as for the financial information.

- *Copy the user*: allows you to pass on the user of the old equipment to the new one. Caution: same remark as for the financial information.
- *Copy group*: Allows you to assign the group of the old equipment to the new equipment. Caution: same remark as for the financial information.
- *Copy the tickets*: Allows you to attach the tickets of the old equipment to the new equipment.
- *Copy network connections*: Allows you to transfer the network connections from the old hardware to the new hardware.
- *Copy direct connections*: Allows you to transfer the direct connections (Monitor, Printer, Device, Phone) from the old hardware to the new hardware.

## 18.7 Replace hardware

As well as uninstalling equipment, there are two ways to replace equipment:

- from the card of this one, in the tab «Plugins -> Uninstallation»,
- from the massive modification list.

Since a replacement template can be recursive (visible in the sub-entities), the list of templates displayed in the massive actions indicates all the templates available in the current entity (either those defined in this entity, or in an entity above it and visible in the sub-entities).

Once you have selected the hardware to be replaced via the massive actions, or you use the «Uninstall» tab directly in it :

- a summary of the selected template appears in order to show you the actions that will be performed by the plugin.
- the list of the selected hardware(s) appears and you can choose the replacement hardware in the same way as when you choose a hardware in a Support Ticket.

The screenshot shows the GLPI Administration interface. The top navigation bar includes 'Home', 'Administration', 'Assets', 'Assistance', 'Management', 'Tools', 'Administration', and 'Setup'. The main content area is titled 'Reminder of the replacement model - General informations' and contains the following information:

Reminder of the replacement model - General informations			
Copy Name	Yes	Copy Serial number	Yes
Copy Inventory number	Yes	Overwrite informations (from old item to the new)	No
Archiving method of the old material	Delete + Comment	New location of item	Empty location
New status of the computer	Status		

Below this is the 'Reminder of the replacement model - Connections with other materials' section:

Reminder of the replacement model - Connections with other materials			
Copy Documents	Yes	Copy Contract	Yes
Copy Financial and administratives information	Yes	Copy Reservations	Yes
Copy User	Yes	Copy Group	Yes
Copy Tickets	Yes	Copy Connections Networks	Yes
Copy Direct connections	Yes		

At the bottom is the 'Choices for item to replace' section:

Choices for item to replace			
Old item	Inventory number	Serial number	New Item
N/A	Asset-1234567890	140424546501596	-----   1

A 'Replace' button is visible below the table. At the bottom right of the page, there is a small copyright notice: 'GLPI 9.4.5 Copyright (C) 2015-2019 Teclib' and contributors FusionInventory 9.4.4+2.3 - Copyright © 2010-2019 by FusionInventory Team'.

### 18.7.1 Change of location on replacement

It is possible to change the location of the equipment once it has been replaced. This selection is made either :

- in the equipment sheet, once the replacement model has been chosen,
- from the user's preferences for massive modification replacement.

Note that a location is declared within an entity. It is therefore possible, depending on the current entity, to define a replacement location.

## 18.8 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

## 19.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

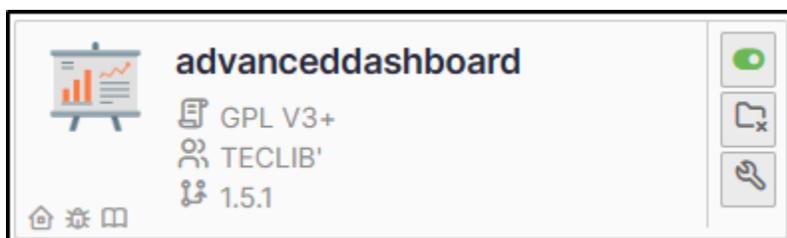

---

**Примечание:** A [standard licence](#) (or higher) is required. This plugin is also available from the [Cloud](#).

---

## 19.2 Install the plugin

- Go to the marketplace. Download and install the “**Advanced dashboard**” plugin.

## 19.3 Setup the plugin

**Предупреждение:** This plugin requires a **minimum knowledge of SQL** in order to be able to set certain criteria for the various queries that will appear in the dashboards. It is also recommended that you **know the structure of GLPI tables**.

### 19.3.1 Create an SQL query

The below example gives us the number of tickets on the root entity over the last 2 years:

```
SELECT YEAR(t.date_creation) as 'Year', count(*) as 'Volume of tickets'
FROM glpi_tickets t
JOIN glpi_entities e on t.entities_id = e.id
WHERE e.completename LIKE "Root entity"
      AND YEAR(t.date_creation) > YEAR(CURRENT_DATE()) - 5
GROUP BY YEAR(t.date_creation)
UNION
SELECT
  CONCAT('Estimated total end ', YEAR(CURRENT_DATE())),
  ROUND(
    (
      SELECT count(*)
      FROM glpi_tickets t4
      JOIN glpi_entities e4 on t4.entities_id = e4.id

      WHERE e4.completename LIKE "Entité racine" (root entity)
            AND YEAR(t4.date_creation) = YEAR(CURRENT_DATE()) - 1
    ) *
    (
      (
        SELECT count(*)
        FROM glpi_tickets t3
        JOIN glpi_entities e3 on t3.entities_id = e3.id
        WHERE e3.completename LIKE "Root entity"
              AND YEAR(t3.date_creation) = YEAR(CURRENT_DATE())
      )
      /
      (
        SELECT count(*)
        FROM glpi_tickets t2
        JOIN glpi_entities e2 on t2.entities_id = e2.id
        WHERE e2.completename LIKE "Root entity"
              AND YEAR(t2.date_creation) = (YEAR(CURRENT_DATE()) - 1)
              AND (
                MONTH(t2.date_creation) < MONTH(CURRENT_DATE())
                OR MONTH(t2.date_creation) = MONTH(CURRENT_DATE()) AND DAY(t2.
↵date_creation) <= DAY(CURRENT_DATE())
              )
      )
    )
  )
)
```

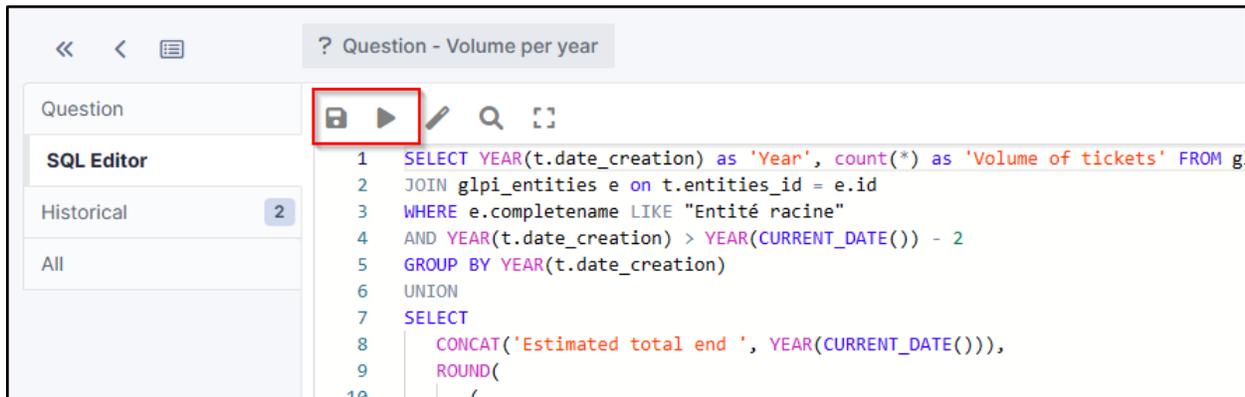

(continues on next page)

(продолжение с предыдущей страницы)

)

### 19.3.2 Setting query-related parameters

- From **tools > SQL for dashboards**, click on **add**
- Name your query (the one that will be visible from the dashboards) and identify it as **active**.
- In the SQL Editor tab, paste the above query, taking care to change the name of the entity if you have changed it.
- Click on the floppy icon to save the query and then on play icon to run the query.

An insert at the bottom will display the result of the query:

Year	Volume of tickets
2022	12
2023	59
Estimated total end 2023	59

- In the **set up fields** tab, define the label, the number and the main label (optional, this is the name your table will have). In our case, *the label will be «year», the number will be «number of tickets» and the main label will be «number of tickets per year».*
- Select the type of graph (this is for information purposes only, so that you can preview your table; you will be asked to select the type of graph you want to appear in the tile later),
- You can limit the amount of data to be displayed.
- Then click on **Save fields and preview**.

### Fields

Label

Number

Main label

**Widget to use (only for preview tab)**

Pie

Donut

Half pie

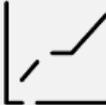

Half donut

Bars

Line

Horizontal bars

Multiple numbers

Summary numbers

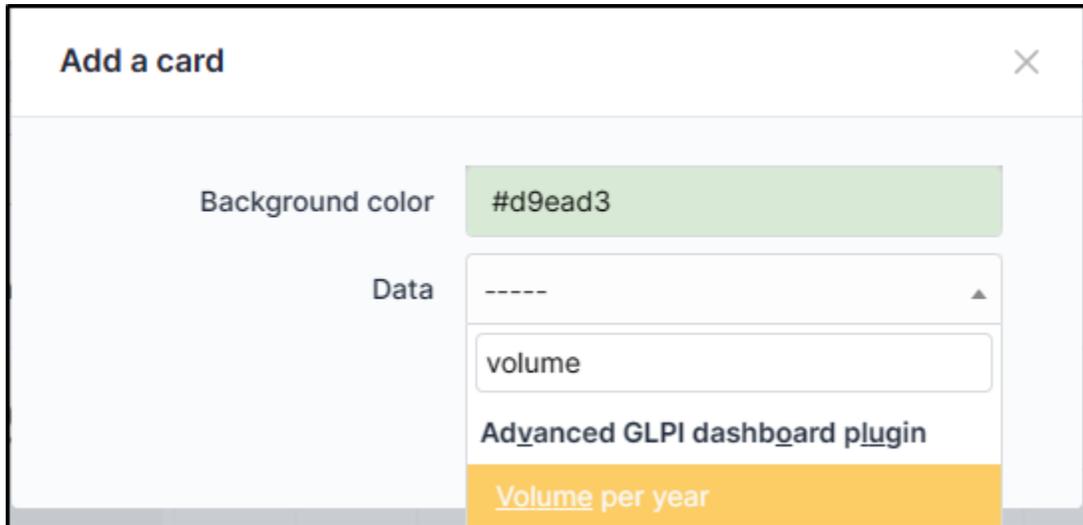

Data table

Limit number of data

### 19.3.3 Dashboard settings

- From **Assistance > Dashboard**, select the dashboard that is to receive the new tile
- Click on edit icon
- Add a new tile with plus icon
- Select the query you have just created
- Choose a colour for your tile

- You will then be asked to select the chart type
- Some dashboards may ask you to use colours and display values and labels.
- Your tile is now ready

## 19.4 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

Widget

## 20.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available from the [Cloud](#).

## 20.2 Install the plugin

- Go to the marketplace. Download and install the “*Anonymize*” plugin.

## 20.3 Choice of profile

Anonymisation works by profile. There are 4 profiles already created. When you select a profile, a certain amount of data is already set. They can, of course, be modified.

- Go to **Administration** > **Anonymization profile** and select the profile best suited to your needs:

The 4 profiles you will find are :

- Email
- Entity
- Computer
- User profile

Home / Administration / Anonymization profile

Items seen: contains

NAME	TYPE	DEFAULT
<input type="checkbox"/> Courriel	UserEmail	Yes
<input type="checkbox"/> Entité	Entity	Yes
<input type="checkbox"/> Ordinateur	Computer	Yes
<input type="checkbox"/> Utilisateur	User	Yes

Showing 1 to 4 of 4 rows

## 20.4 Anonymisable data per profile (predefined)

Each profile has an element assigned to it. You will need to define the value of each attribute that it will be able to anonymise (or not)

Anonymization profile - Courriel

Name: Courriel | Itemtype: Emails

History: No action | Default: Yes

**Attributes**

users\_id: Keep

is\_default: Replace by a set value (0)

email: Replace by a realistic random value

**Global searches**

Attributes to search and replace in others objects

Buttons: Delete permanently, Save

### 20.4.1 Email

- *users\_id*
- *is\_default*
- *email*

### 20.4.2 Entity

- *name*
- *entities\_id*
- *comment*
- *level*
- *sons\_cache*
- *ancestors\_cache*
- *address*
- *postcode*
- *town*
- *state*
- *country*
- *website*
- *phonenummer*
- *fax*
- *email*
- *admin\_email*
- *admin\_email\_name*
- *from\_email*
- *from\_email\_name*
- *noreply\_email*
- *noreply\_email\_name*
- *replyto\_email*
- *replyto\_email\_name*
- *notification\_subject\_tag*
- *ldap\_dn*
- *tag*

- *password\_forget\_token\_date*
- *user\_dn*
- *personal\_token*
- *personal\_token\_date*
- *api\_token*
- *api\_token\_date*
- *cookie\_token*
- *cookie\_token\_date*
- *isd\_ldap*
- *picture*
- *begin\_date*
- *end\_date*
- *page\_layout*
- *fold\_menu*
- *fold\_search*
- *savedsearches\_pinned*
- *timeline\_order*
- *itil\_layout*
- *richtext\_layout*
- *date\_creation*
- *groups\_id*
- *users\_id\_supervisor*
- *timezone*
- *default\_central\_tab*
- *nickname*
- *timeline\_action\_btn\_layout*
- *timeline\_date\_format*
- *use\_flat\_dropdowntree\_on\_search\_result*

## 20.5 Application strategy

Several strategies are available for each element field (e.g.Last name, First name, Serial number, Location, Status, etc.):

- Keep the value
- Delete the value
- Replace with a fixed value
- Replace with a standard random value
- Replace with a realistic random value

## 20.6 History

Each profile allows you to choose the treatment to be applied to the history of items:

- Do nothing
- Clean up values
- Clean up recent values and delete the rest
- Delete

## 20.7 Global search

You can ask GLPI to anonymise an attribute in the whole database and not only in the type of element you are in. The option **attributes to search and replace in others objects** is at the very bottom of your profile.

Attributes to search and replace in others objects	<input type="text" value="xemail"/>
--	-------------------------------------

---

**Примечание:** You cannot change any values other than those linked to the type of element you are in. For example, you will be able to **modify all email addresses** in the database via the **Email** profile, but you will not be able to modify all user phone number via this profile.

---

## 20.8 Applying the profile

Once you have completed your profile, you need to apply it. It can be applied using 2 methods:

- Massive action via the web interface (*cloud and on-premise*)
- In CLI (*only on-premise*)

## 20.8.1 Mass action (Cloud and on-premise)

In our example, we will be anonymising *user data*.

- Go to **Administration** > **Users**. Select the user(s) you wish to anonymise.
- Click on **Actions** then **anonymise selected items**.

---

**Примечание:** «To be adapted If your profile concerns entities, go to **Administration** > **Entities** and repeat the operation for the entities concerned. Do the same for computers, email, etc.

---

## 20.8.2 Via CLI (on-premise only)

- Go to your GLPI folder (*/var/www/glpi* or other depending on your configuration):
- Run all default profiles on all objects:

```
$ php bin/console glpi:plugin:anonymize --all
```

- Run profile X on all objects / on one object:

```
$ php bin/console glpi:plugin:anonymize --profile=X
$ php bin/console glpi:plugin:anonymize --profile=X --item-id=X
```

- Run default profile type X on all objects / on one object :

```
$ php bin/console glpi:plugin:anonymize --itemtype=X
$ php bin/console glpi:plugin:anonymize --itemtype=X --item-id=X
```

## 20.9 Creating a profile

You can create a profile to anonymise other data than that mentioned above.

- Go to **Administration** > **Anonymisation profile**
- Click on **Add**
- Name your profile
- Choose from the list of **Element types** (agent, domain, etc.)
- Select the treatment of the **History**
- Set the parameters for each field
- Click on **Add**

---

**Примечание:** Remember to refer to the profile application section to apply your changes.

---

## 20.10 Other anonymisable data (profile creation)

### 20.10.1 Agents

- *deviceid*
- *entities\_id*
- *name*
- *agenttypes\_id*
- *last\_contact*
- *version*
- *locked*
- *itemtype*
- *items\_id*
- *useragent*
- *tag*
- *port*
- *threads\_networkdiscovery*
- *threads\_networkinventory*
- *timeout\_networkdiscovery*
- *timeout\_networkinventory*
- *remote\_addr*
- *use\_module\_wake\_on\_lan*
- *use\_module\_computer\_inventory*
- *use\_module\_esx\_remote\_inventory*
- *use\_module\_remote\_inventory*
- *use\_module\_network\_inventory*
- *use\_module\_network\_discovery*
- *use\_module\_package\_deployment*
- *use\_module\_collect\_data*

### 20.10.2 Appliances

- *entities\_id*
- *Garder*
- *name*
- *appliancetypes\_id*
- *comment*
- *locations\_id*

- *manufacturers\_id*
- *applianceenvironments\_id*
- *users\_id*
- *users\_id\_tech*
- *groups\_id*
- *groups\_id\_tech*
- *date\_mod*
- *date\_creation*
- *states\_id*
- *externalidentifier*
- *serial*
- *otherserial*
- *is\_helpdesk\_visible*
- *pictures*
- *contact*
- *contact\_num*

### 20.10.3 Budgets

- *name*
- *entities\_id*
- *comment*
- *begin\_date*
- *end\_date*
- *value*
- *template\_name*
- *date\_mod*
- *date\_creation*
- *locations\_id*
- *budgettypes\_id*

## 20.10.4 Cables

- *name*
- *entities\_id*
- *itemtype\_endpoint\_a*
- *itemtype\_endpoint\_b*
- *items\_id\_endpoint\_a*
- *items\_id\_endpoint\_b*
- *socketmodels\_id\_endpoint\_a*
- *socketmodels\_id\_endpoint\_b*
- *sockets\_id\_endpoint\_a*
- *sockets\_id\_endpoint\_b*
- *cablestrands\_id*
- *color*
- *otherserial*
- *states\_id*
- *users\_id\_tech*
- *cabletypes\_id*
- *comment*
- *date\_mod*
- *date\_creation*

## 20.10.5 Changes

- *name*
- *entities\_id*
- *status*
- *content*
- *date\_mod*
- *date*
- *solvedate*

## 20.11 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

## 21.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** [standard license](#) (or higher) is required. This plugin is also available from the [Cloud](#).

## 21.2 Install the plugin

- Go to the marketplace. Download and install the plugin **ApprovalByMail**.

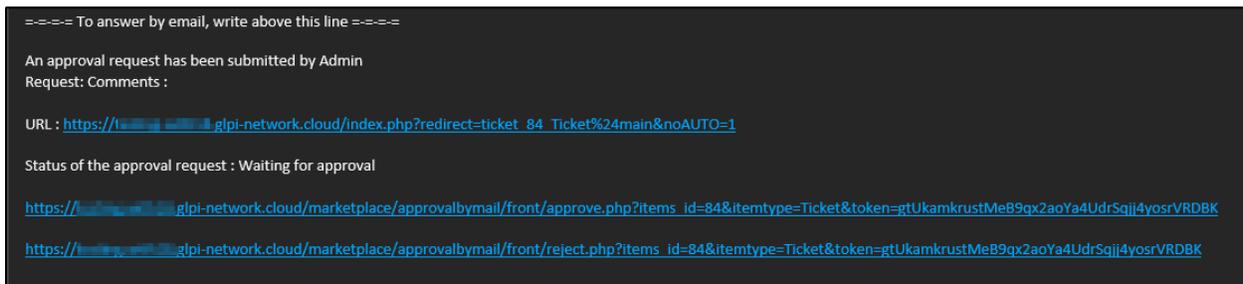

## 21.3 Using the plugin

Once activated, there are no specific settings to be made (apart from the notification layout, if you wish, via **Setup > Notifications > Notification templates**. The template is **Tickets validation**)

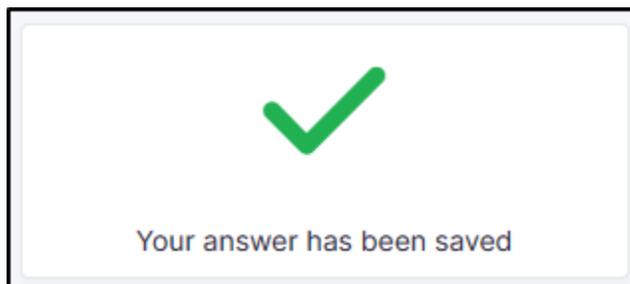

- In a new ticket, enter the name of the person or group receiving the approval request.

An email will be received with the option of **Validating** or **Refusing** the request. This contains 3 links (if no changes have been made to the model).

- The ticket reminder
- The acceptance link
- The refusal link

- When the form is validated, you are redirected to GLPI with a notification of acceptance:

- If the form is refused, a comment will be requested to validate the refusal:
- It is not possible to reply 2 times to the validation, an error message will be displayed:

Informations of Ticket - ID 86 (Entité racine) ⓘ

Requester

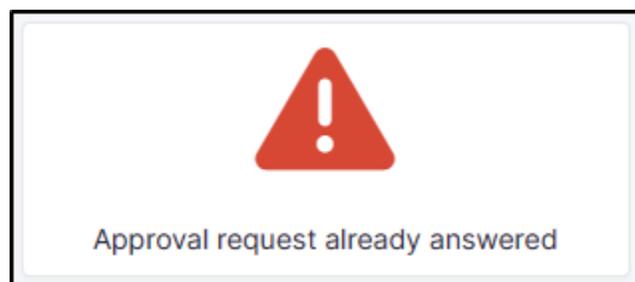

Opening date 04-12-2023 16:24:10 

Category

Title Replace PC

Description Request to replace the PC for Mr. Dupont

 Please give a reason and click on refuse

## 21.4 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

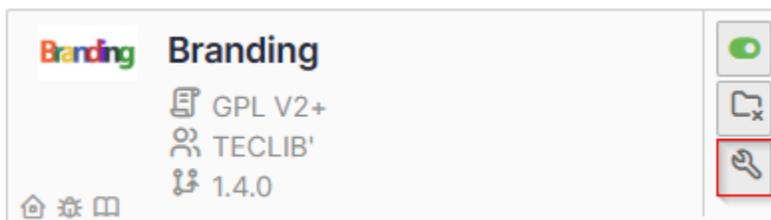

## 22.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A basic licence (or higher) is required. This plugin is also available from the [Cloud](#).

## 22.2 Install the plugin

- Go to the marketplace. Download and install the **Branding** plugin.

## 22.3 Customize your instance

- Go to **administration** > **entities** > **branding** tab

Here you can replace :

- the logo at top left (including folded bar)
- the logo on the login page,
- the background of the login page,
- the icon in the browser bar

Custom logos

Top left corner logo 

File(s) (20 Mio max) 

Drag and drop your file here, or

Top left corner logo (collapsed sidebar) 

File(s) (20 Mio max) 

Drag and drop your file here, or

Favicon 

File(s) (20 Mio max) 

Drag and drop your file here, or

Login page logo 

File(s) (20 Mio max) 

Drag and drop your file here, or

Login page background 

File(s) (20 Mio max) 

Drag and drop your file here, or

## 22.4 Custom by entity

You can modify certain elements by entity:

- the logo at top left (including folded bar)
- the icon in the browser bar

Other customisations are common to all entities

### Custom logos

**Top left corner logo**   

File(s) (20 Mio max) ⓘ

Drag and drop your file here, or

Choisir un fichier    Aucun fichier n'a été sélectionné

**Top left corner logo (collapsed sidebar)**   

File(s) (20 Mio max) ⓘ

Drag and drop your file here, or

Choisir un fichier    Aucun fichier n'a été sélectionné

File(s) (20 Mio max) ⓘ

Drag and drop your file here, or

Choisir un fichier    Aucun fichier n'a été sélectionné

## 22.5 Recommendations

- **Top Left corner logo** - This can be changed according to the desired entity It is the logo you see when your GLPI page is opened and the left sidebar is expanded

Default recommended size: **100x55 pixels**

- **Lop Left corner logo** (collapsed sidebar) - This can be changed according to the desired entity It is the logo you see when your GLPI page is opened and the left sidebar is collapsed.

Default recommended size **40x40 pixels**

- **Favicon** It is the logo you see next to the page title at the beginning of your browser's the tab.

Default recommended size: **16x16 or 32x32 pixels**

- **Login page logo** It is the logo you see before you login. It appears with the fields to fill with your username and password

Default recommended size: **220x130 pixels**

- **Login page background** It is the image you can add as a background at the login page.

Default recommended size: **It depends on the usual size of your screens.** The bigger, the better. (Make sure not to surpass the maximum upload limit for files)

## 22.6 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

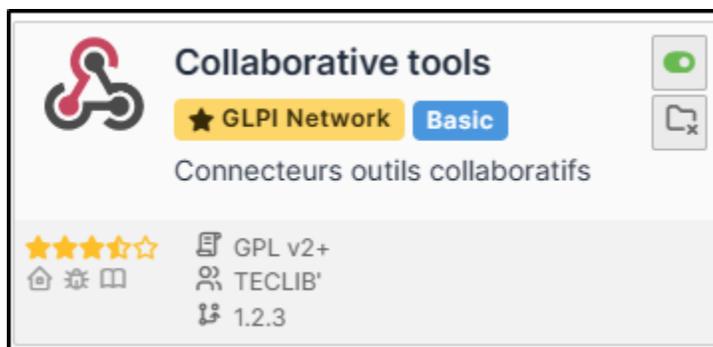

## 23.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available on [Cloud](#).

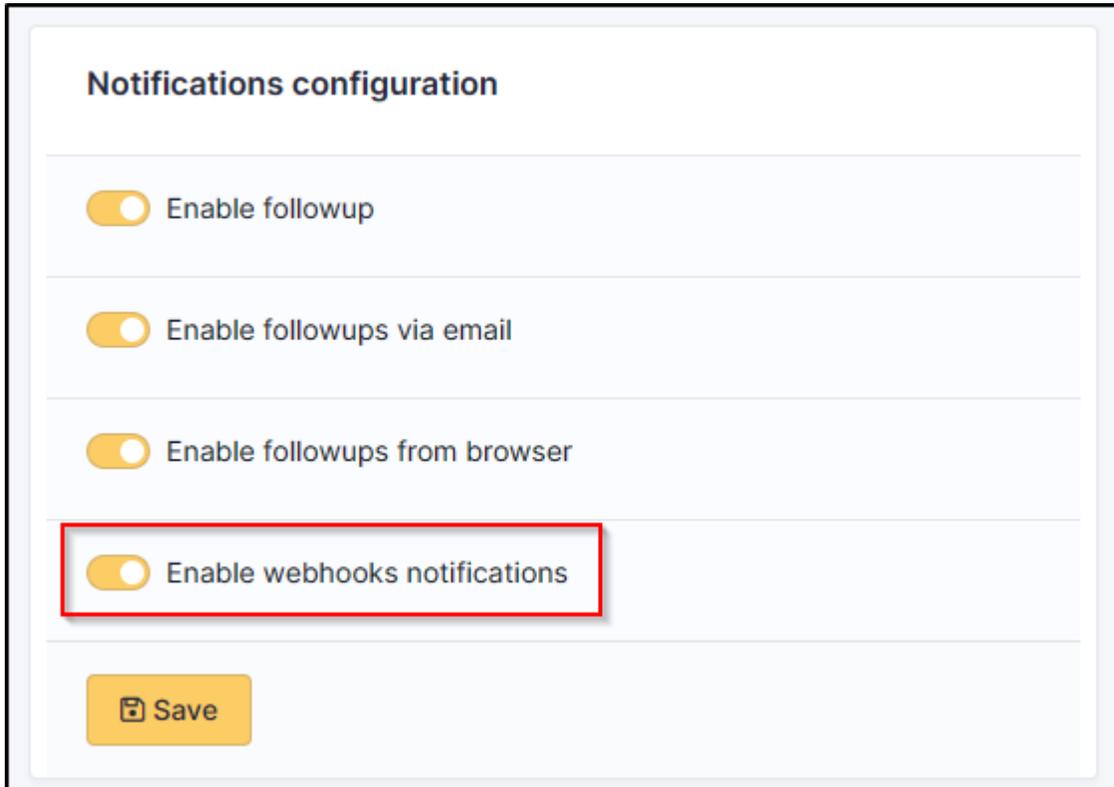

### 23.1.1 Install the plugin

- Go to the marketplace. Download and install the plugin **Collaborative tools**.

### 23.1.2 Activate webhooks

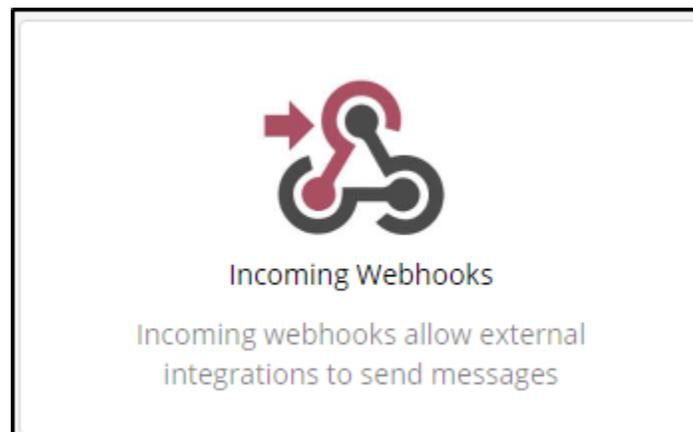

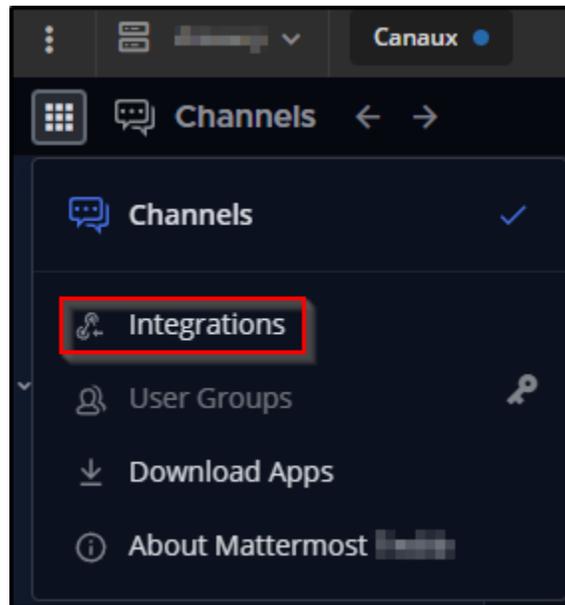

- In the tab **Setup** > **Notifications** activate Webhooks notifications

### 23.1.3 Mattermost

- From a Mattermost administrator account, go to the menu at the top left,
- Then Integrations
- Select **Incoming Webhooks**
- Then **Add a new incoming webhook**.
- Fill in the necessary fields and select the channel that will receive the notifications
- Then click on **Save**.
- You will then be sent the link to your Webhook:

### Incoming Webhooks

[Add Incoming Webhook](#)

Use incoming webhooks to connect external tools to Mattermost. [Build Your Own](#) or visit the [App Directory](#) to find self-hosted, third-party apps and integrations.

No incoming webhooks found

### Incoming Webhooks > Add

Title

Specify a title, of up to 64 characters, for the webhook settings page.

Description

Describe your incoming webhook.

Channel

This is the default public or private channel that receives the webhook payloads. When setting up the webhook, you must belong to the private channel.

Lock to this channel

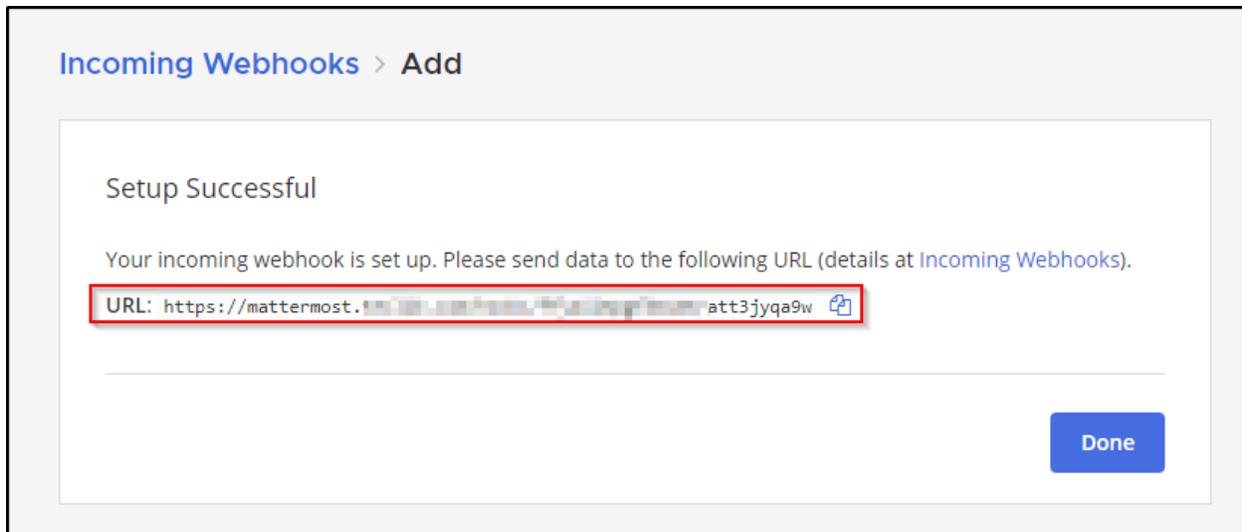

If set, the incoming webhook can post only to the selected channel.

Username

Specify the username this integration will post as. Usernames must be in lowercase, be up to 22 characters, and can contain numbers and the symbols "-", "\_", and ".". If left blank, the name specified by the webhook creator is used.

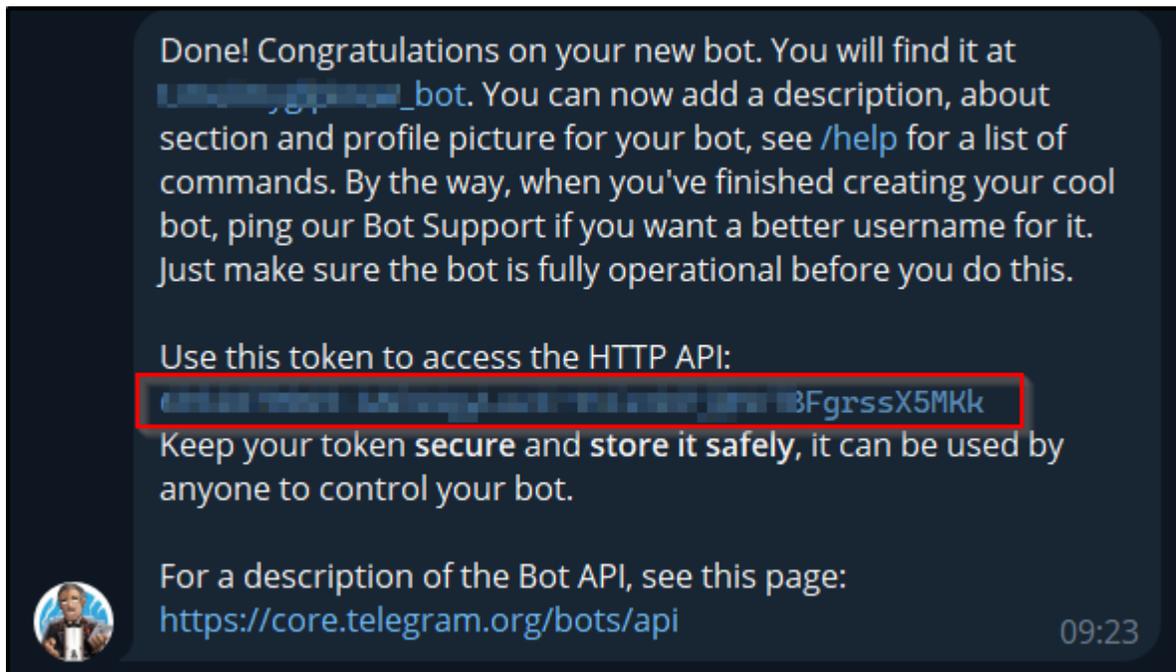

Profile Picture

Enter the URL of a .png or .jpg file for the profile picture of this integration when posting. The file should be at least 128 pixels by 128 pixels. If left blank, the profile picture specified by the webhook creator is used.

### 23.1.4 Telegram

- From Telegram, start a new chat with the bot **@BotFather** and run the following command `/newbot`
- Answer the few questions you will be asked to set up your bot
- Once finished, a token will be sent to you:

- If you have already created a dedicated channel to receive GLPI notifications, add your bot to it.
- Otherwise, create your own channel
- add the newly created bot
- Send a message in the channel created to initiate a conversation and generate the various IDs we will need.

- From your browser, enter the following URL:

`https://api.telegram.org/botmytoken/getupdates`

Replace *mytoken* with the value of the token generated above

---

**Примечание:** Telegram bot URLs take the form `https://api.telegram.org/bot{mytoken}`

---

- You should see a similar result:

```
"ok": true,
"result": [
  {
    "update_id": 816584684,

        "username": "xxxxxx_bot"
      }
    }
  }
]
```

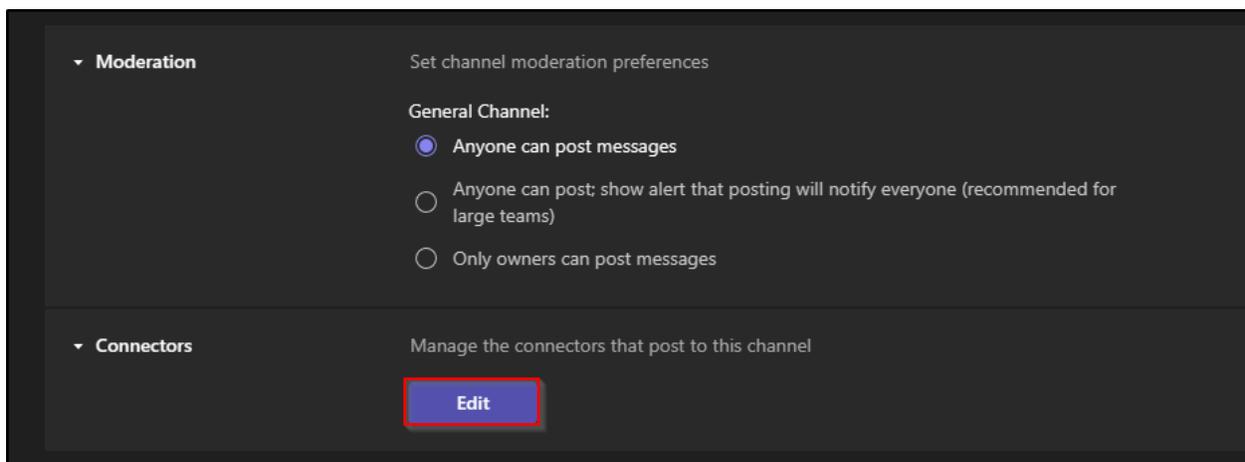

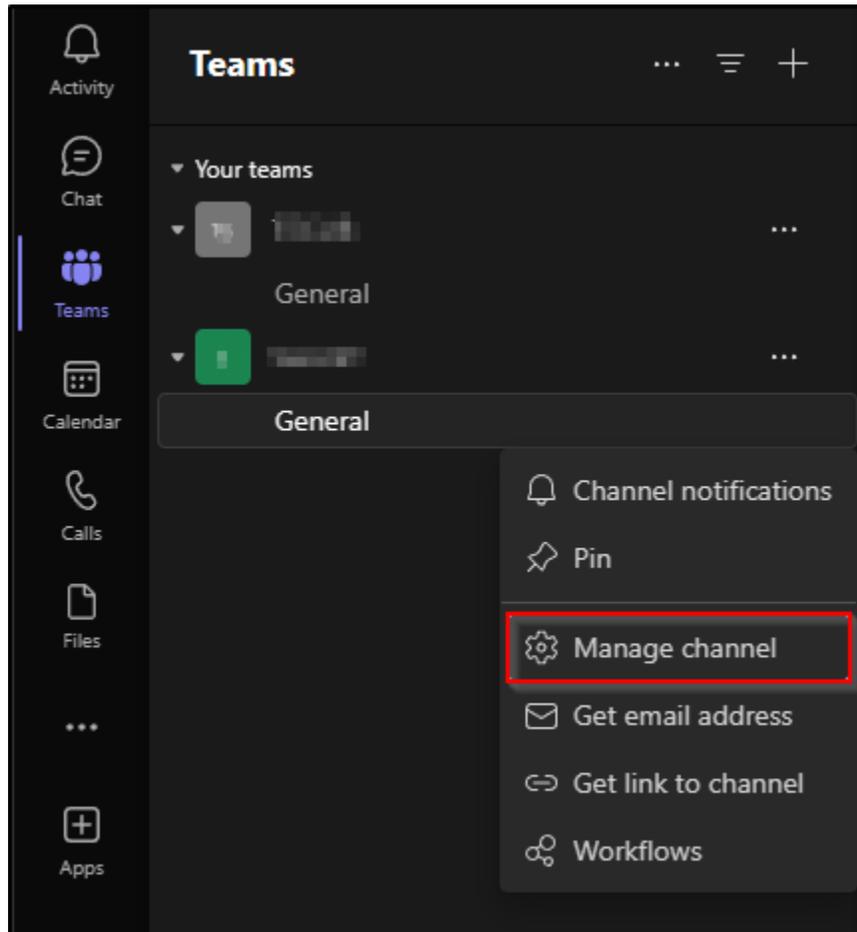

- In the `my_chat_member` copy the **ID** value of the `chat`.

**Предупреждение:** The negative sign - must also be copied

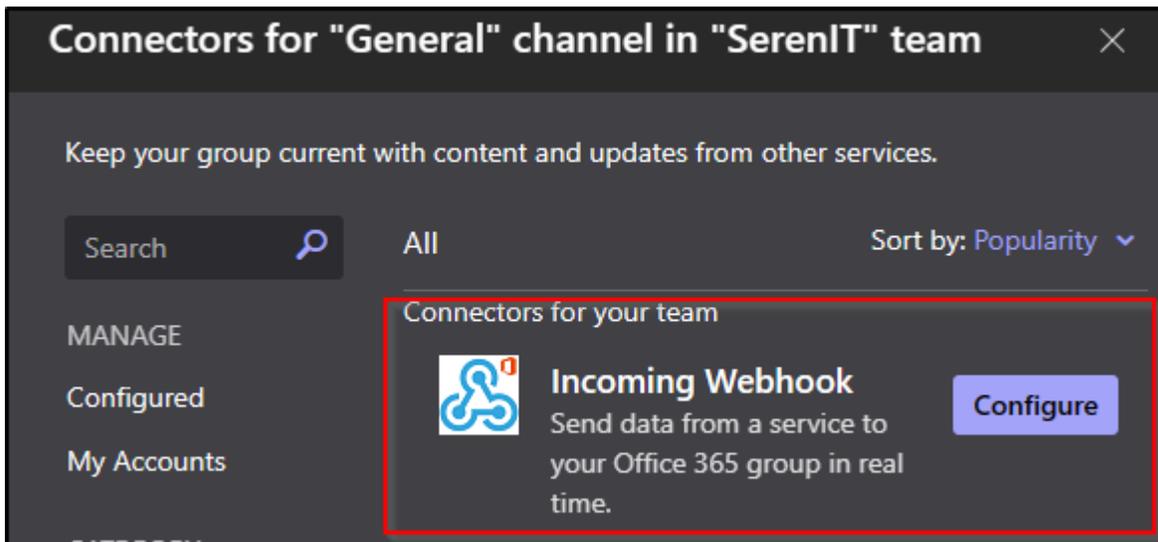

### 23.1.5 Teams

- From a Teams administrator account, go to the channel that will receive GLPI notifications
- Click on the channel menu
- Then **Manage channel**
- In the **Connectors** section,
- click on **Modify**
- From the **incoming Webhook connector**

- click on **Configure**

- Enter a name for your webhook and an image (optional)
- Click on **Create**
- You will then be sent the URL of your webhook

### 23.1.6 Rocket

- You need to add an application to your team (the link is present in the bottom of the left sidebar) and select incoming-webhook
- Add a new configuration, select the channel where you want notifications and you will get the webhook url.
- You can optionally setup a name and a logo for your hook.

### 23.1.7 Slack

- As a logged team administrator, go to the administration menu
- click on Integrations menu item
- Click on the New integration button
- Select incoming webhooks, and define webhook parameters
- After save, you will get the url of the webhook.

## Connectors for "General" channel in "SerenIT" team ✕

### Incoming Webhook Send feedback

The Incoming Webhook connector enables external services to notify you about activities that you want to track. To use this connector, you'll need to create certain settings on the other service, which needs to support a webhook that's compatible with the [Office 365 connector format](#).

Fields marked with \* are mandatory

To set up an Incoming Webhook, provide a name and select Create. \*

Customize the image to associate with the data from this Incoming Webhook.

## Connectors for "General" channel in "SerenIT" team ✕

### Incoming Webhook Send feedback

The Incoming Webhook connector enables external services to notify you about activities that you want to track. To use this connector, you'll need to create certain settings on the other service, which needs to support a webhook that's compatible with the [Office 365 connector format](#).

Fields marked with \* are mandatory

Enter a name for your IncomingWebhook connection. \*

Customize the image to associate with the data from this Incoming Webhook.

[Upload Image](#)

Copy the URL below to save it to the clipboard, then select Save. You'll need this URL when you go to the service that you want to send data to your group.

Url is up-to-date.

### 23.1.8 Set up the webhook in GLPI

- Fill in the requested information and select the channel on which you want the notifications to be sent.
- Once registered, a link will be sent to you. Copy this link and transfer it to **Setup > Notifications > Configuration of notifications by webhooks**
- Click on + and enter :
  - Webhook name,
  - the type,
  - the URL.

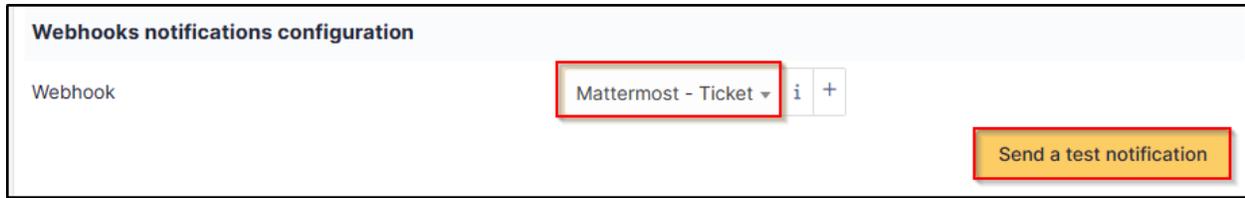

The screenshot shows the 'New item - Webhook' form. The 'Name' field contains 'Mattermost - Ticket'. The 'Webhook type' dropdown is set to 'Mattermost'. The 'Webhook URL' field contains a partially visible URL starting with 'https://mattermost.'. The 'Messages language' dropdown is set to 'English'. A '+ Add' button is located at the bottom right of the form.

- Click on **Add**

**Предупреждение:** For Telegram, you will need to re-enter the webhook and add the `chat_id` you selected earlier

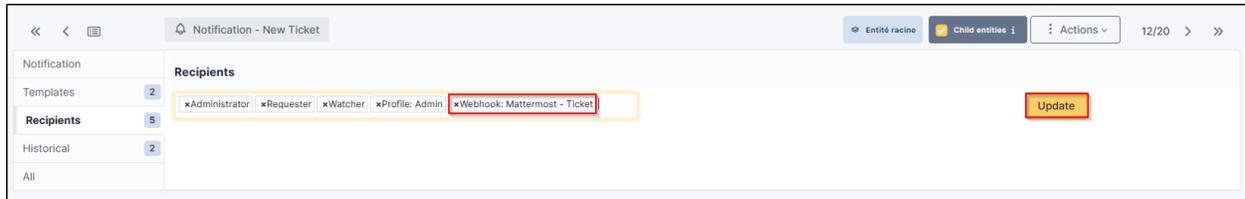

The screenshot shows the 'Webhook - Telegram - Ticket' form. The 'Name' field contains 'Telegram - Ticket'. The 'Webhook type' dropdown is set to 'Telegram'. The 'Webhook URL' field contains a partially visible URL starting with 'https://api.telegram.org/bot69328790...'. The 'Messages language' dropdown is set to 'Français'. The 'Additional parameters' section has a field for 'Telegram channel identifier (chat\_id)' with the value '-541684658463'. At the bottom right, there are 'Delete permanently' and 'Save' buttons.

- You can test how it works by selecting your webhook and clicking on **Send notification**

### 23.1.9 Recipients

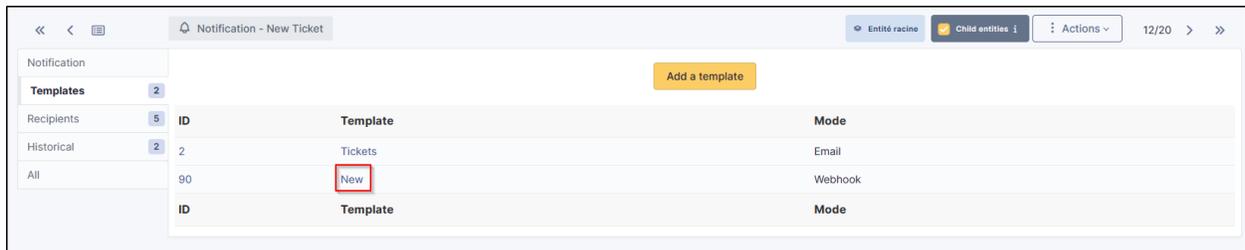

- You now need to determine which notifications will be affected by the sending of a Webhook and assign them a template.
- Go to **Setup > Notifications > Notifications**
- Select the 1st notification concerned by Webhooks (here **New ticket**)
- In the **Recipients** tab, add your Webhook then **Update**.

### 23.1.10 Templates

- In the tab **Templates** click **Add a template**
- Choose **Webhook** in the **Notification method** and **New** in the **Notification template**

Your Webhook is ready to use. You can customise the template by clicking on **New** so that it matches your requirements.

### 23.1.11 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

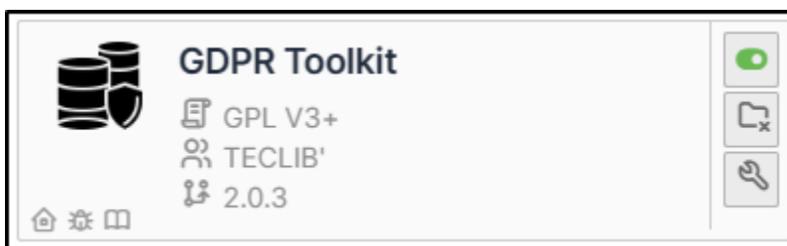

## 24.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic license](#) (or higher) is required. This plugin is also available from the [Cloud](#).

## 24.2 Install the plugin

- Go to the marketplace. Download and install the **GDPR Tools** plugin.

## 24.3 Configure the plugin

- From **Setup** > **General** > **GDPR tools**

### 24.3.1 Cleaning up inactive users

There are two possible ways of managing inactive users:

- Clearing the user's data
- Deleting the user

### 24.3.2 Cleaning up user data

When the plugin is configured in **Clean** mode, the following actions will be performed:

- Delete all references to the user from the GLPI history
- Delete all associated emails
- Reset all user fields and profiles
- Move the user to the recycle bin

### 24.3.3 Delete the user

When the plugin is configured in “Delete” mode, the following actions will be performed:

- Delete all references to the user from the GLPI history
- Delete all associated emails
- Delete the user

<b>Предупреждение:</b> Deletion is permanent, the user cannot be recovered
--

### 24.3.4 Scope restriction

The automated deletion process can be restricted to the following scopes:

- All inactive users
- Inactive users with no current tickets
- Inactive users without tickets

### Automatic action - Auto clean inactive users

Go to action configuration

Mode

### 24.3.5 Automated action

Deletion will take place via a standard GLPI automatic action that can be configured to run as often as you like.

- Go to **Setup > Automatic actions**, and select the **cleaninactiveuser** action then configure it according to your needs.

The screenshot shows the configuration page for the 'Automatic action - cleaninactiveuser' plugin. The page is titled 'Automatic action - cleaninactiveuser' and has a breadcrumb trail 'Automatic action'. On the left, there is a sidebar with the following items: 'Automatic action' (selected), 'Statistics', 'Logs', 'Historical' (with a count of 1), and 'All'. The main content area is divided into two columns. The left column contains the following fields: 'Name' (Gdpr - cleaninactiveuser), 'Description' (Clean or delete inactive users according to GDPR config), 'Run frequency' (Each month), 'Status' (Disabled), 'Run mode' (CLI), 'Run period' (0 -> 24), 'Number of days this action logs are stored' (300), and 'Max user per execution' (200). The right column contains the following fields: 'Name' (Gdpr - cleaninactiveuser), 'Description' (Clean or delete inactive users according to GDPR config), 'Run frequency' (Each month), 'Status' (Disabled), 'Run mode' (CLI), 'Run period' (0 -> 24), 'Number of days this action logs are stored' (300), and 'Max user per execution' (200).

## 24.4 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

## 25.1 Requirements

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

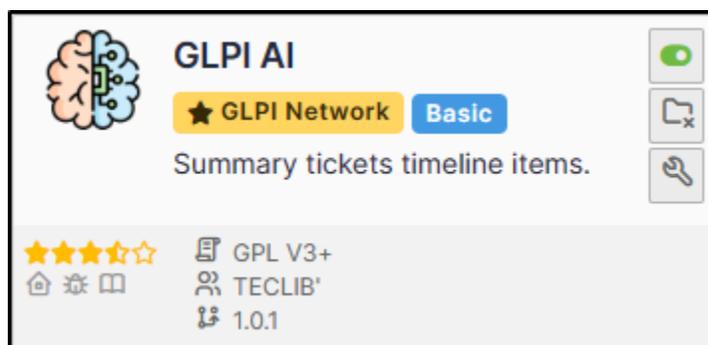

- Open AI API key (free or paid plan) (<https://platform.openai.com/api-keys>)
- Open AI organization ID (<https://platform.openai.com/account/organization>)

**Примечание:** A [basic license](#) (or higher) is required. This plugin is not available from the [Cloud](#).

## 25.2 Install the plugin

- Go to the marketplace. Download and install the **GLPI AI** plugin.

## 25.3 Create an organization

After creating an OpenAI account, you can create an organization from your account settings under the **Organization** tab or by accessing the page directly at <https://platform.openai.com/account/organization>.

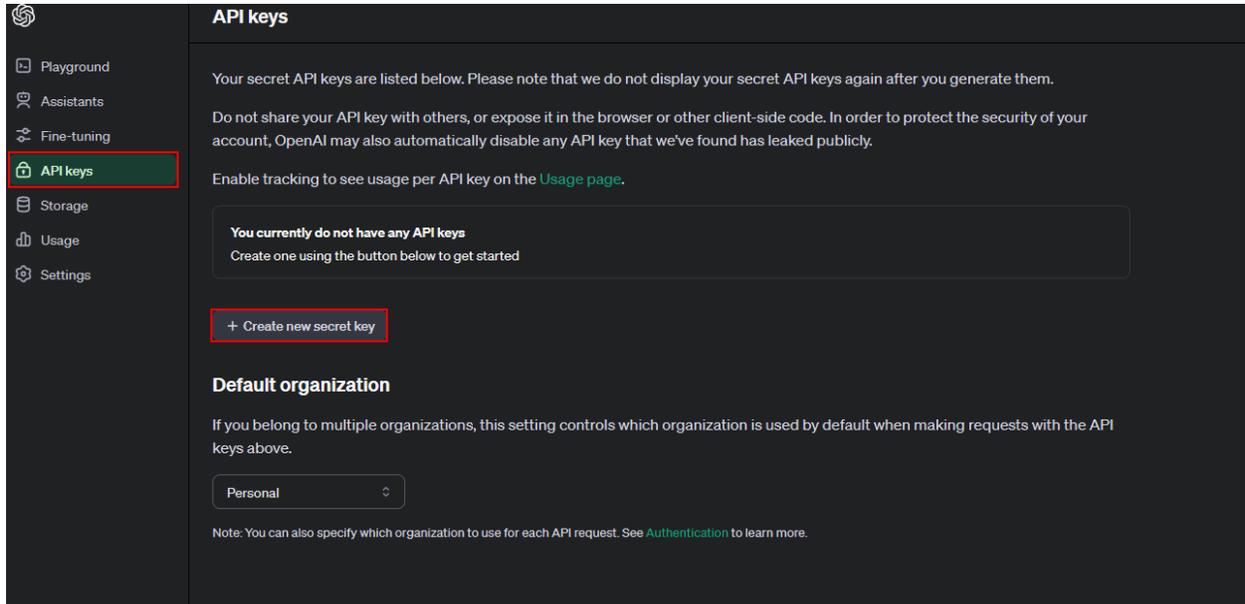

Keep the **Organization ID** value, as you will need to insert it in the GLPI AI plugin configuration.

The screenshot shows the OpenAI organization settings page. The left sidebar contains a navigation menu with the following items: Playground, Assistants, Threads, Fine-tuning, API keys, Storage, Usage, Settings, **Organization** (highlighted with a red box), Team, Limits, Billing, and Profile. The main content area is titled 'Organization' and is divided into two sections: 'Details' and 'Features and capabilities'. In the 'Details' section, there is a field for 'Organization name' with the value 'GLPI' and a field for 'Organization ID' with a value 'org-...' (highlighted with a red box). The 'Features and capabilities' section includes 'Threads' and 'Usage dashboard visibility' options, both of which are set to 'Visible to everyone'. A 'Save' button is located at the bottom of the page.

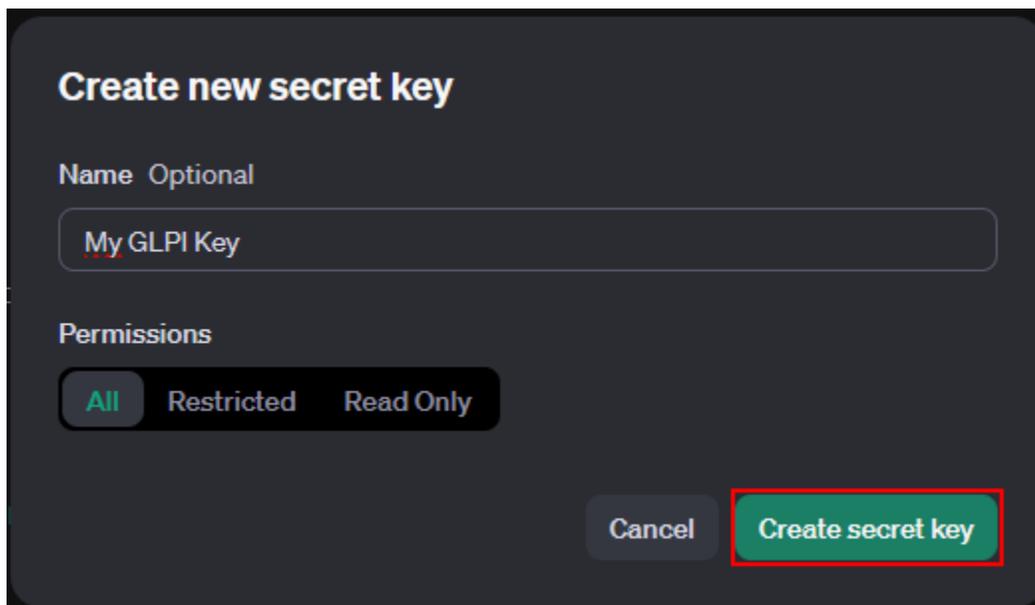

## 25.4 Create a secret

- From this URL <https://platform.openai.com/api-keys>
- Click on **Create a new secret**

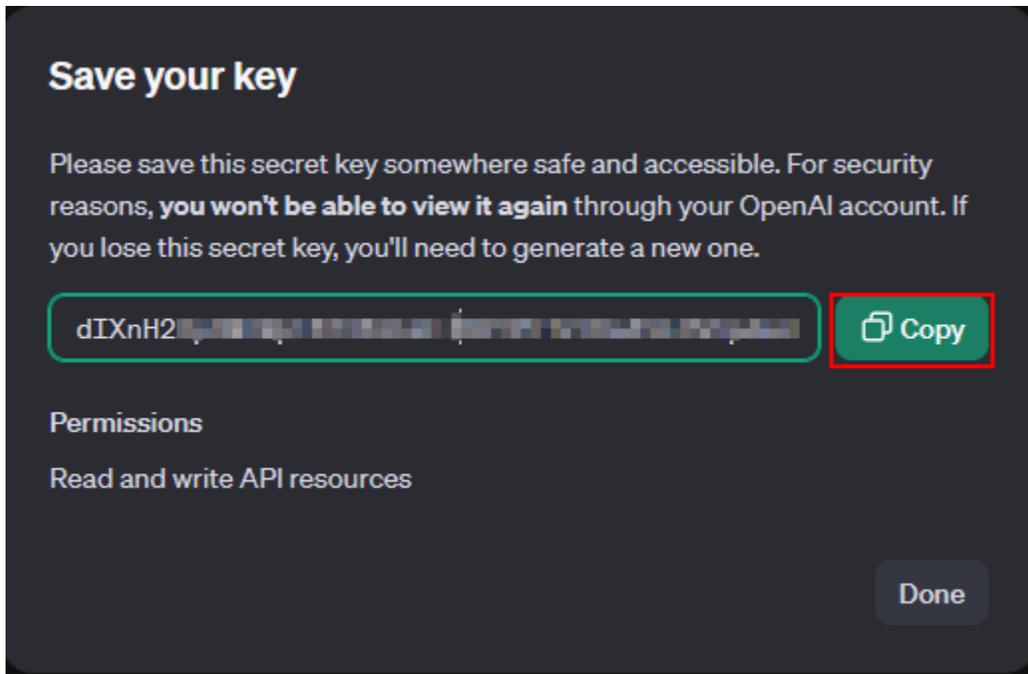

- Give a name to your secret
- Click on **Create secret key**

Copy the secret value that is generated as you will need it later to configure the plugin.

## 25.5 Set up GLPI

- In GLPI, go to **Setup > General > GLPI AI**
- Fill in the fields with the values copied previously
- If your configuration is correct, you will be able to see your account entries, your consumption and your preferences.

## 25.6 Consumption

It is possible to limit the use of the API by specifying a limit that must not be exceeded. This plugin tracks usage based on each response from OpenAI. Therefore, you may need to utilize the «Custom usage» field in the configuration to account for usage outside of the plugin if you want the plugin to account for that in its usage limitation.

1. To limit usage and avoid overruns, specify a value that must not be exceeded. If this limit is exceeded, the plugin will no longer function until this value is increased.
2. Enter the custom usage if you want to account for previous usage outside of the plugin.

No invoices found.

## 25.7 Preferences

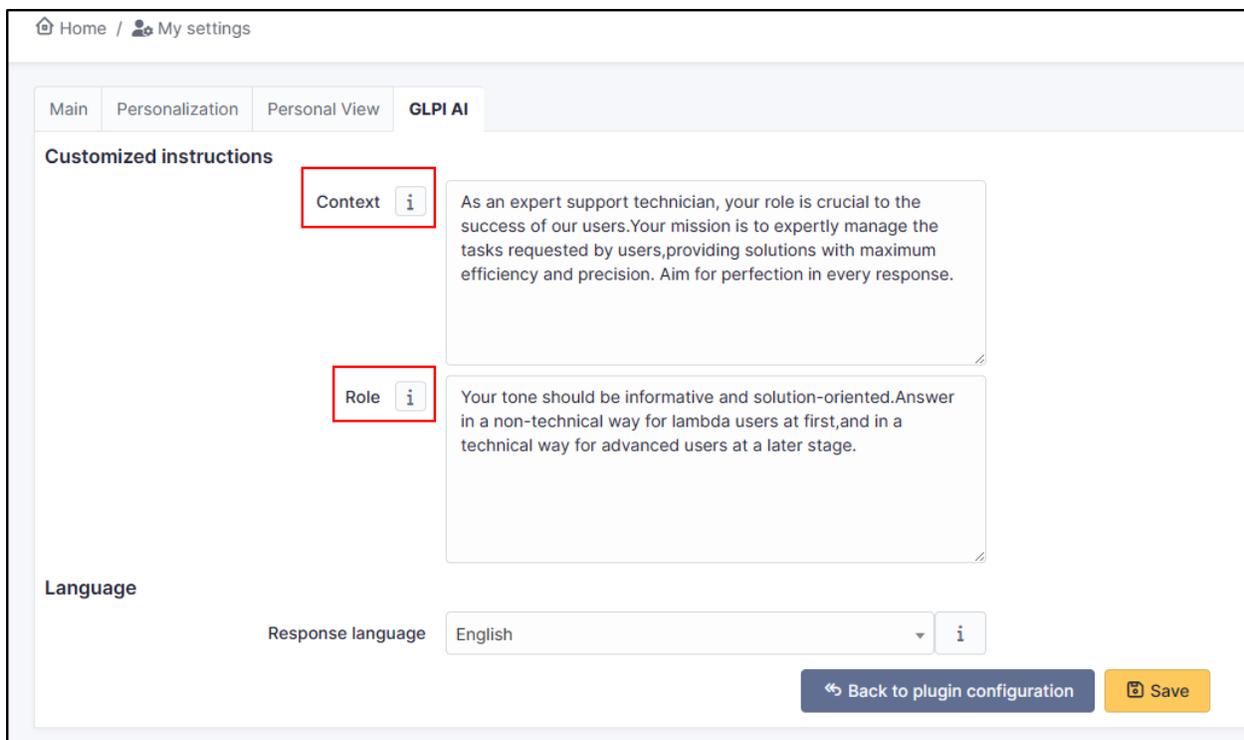

In preferences, you can set up the response model. In Free mode, you can use the GPT-3.5 Turbo 16K model.

You can find information regarding the other plans and plan limits [here](#)

By clicking on **Configure preferences**, you can setup a context and a role.

- The **Context** can be a description of your company, your mission, your job in the company. AI needs to understand your context if it is to respond as pertinently as possible (there is a context by default that you can change).
- The **Role** is how the AI should respond. Does it have a teaching, advisory or expert role? The role can influence the tone and level of detail of the response (there is a role by default that you can change).

## 25.8 Example

You can see an example of what can be achieved with an exchange that includes a lot of followups. The GLPI AI plugin summarizes all of the followups to highlight the main information.

If you want another result, you can click on **Refresh**.

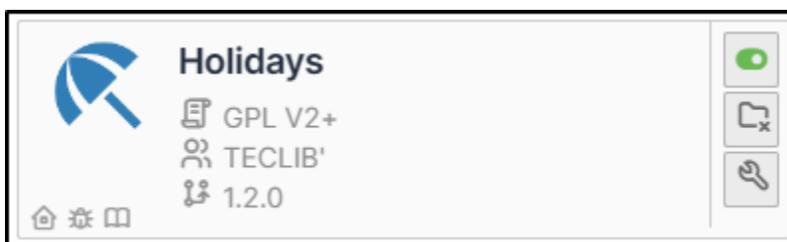

## 26.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic license](#) (or higher) is required. This plugin is also available from the [Cloud](#).

## 26.2 Install the plugin

- Go to the marketplace. Download and install the **Holiday** plugin.

## 26.3 Set up the plugin

- From **Setup** > **General**, in the **Holiday** tab, enter :
  - The **Country** concerned
  - The **Number of years to insert**
  - **Clean all previous holidays** or not
  - Then click on **Insert holiday dates**

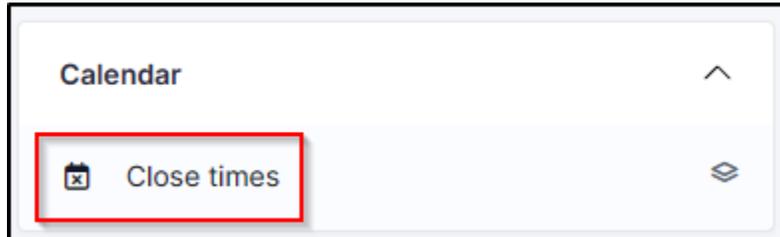

The screenshot shows the configuration interface for the Holidays plugin. On the left is a vertical sidebar with menu items: General setup, Default values, Assets, Assistance, Management, Logs purge, System, Security, API, Impact analysis, Historical, **Holidays** (highlighted), and All. The main content area on the right contains the following settings:

- Country: UnitedKingdom ▼
- Number of years to insert: 20 ▼
- Clean all previous holidays ?
- Insert holidays dates button

## 26.4 Delete a holiday date/period

The list of holiday days can be viewed and modified

- From **Setup** > **Dropdowns**,
- enter **Closing** and click on **Closing times**

The list of days appears. Let's assume that the company considers that Easter Monday is not a day off.

- In the search box, enter **Easter** then **Search**
- Select all the entries
- Click on **Actions**
- Delete permanently

## 26.5 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

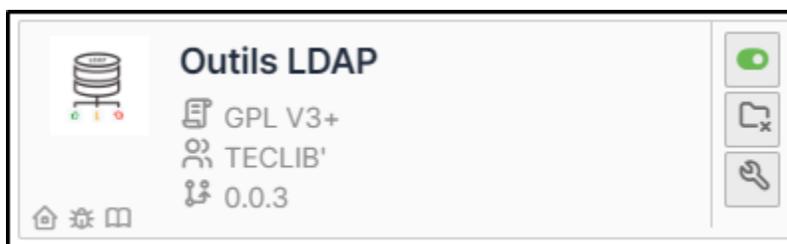

## 27.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available from the [Cloud](#).

## 27.2 Install the plugin

- Go to the marketplace. Download and install the plugin **LDAP Tools**.

## 27.3 Using the plugin

From **tools** > **LDAP Tools**, if you have synchronised LDAP directories, they will appear directly.

LDAP directories	Flux TCP	BaseDN	LDAP URI	Bind auth	Generic search	Filtered search	Attributes
TEST	ldap.glipi-test.eu (TCP/389)	✓	✓	✓	50 entries i	50 entries i	✓ i
TEST	dc01.teclib.labo (TCP/389)	✓	✓	Disabled i	50 entries i	50 entries i	✓ i
ldap.google.com	ldap.google.com (TCP/636)	✓	✓	Disabled i	1 entries i	1 entries i	✓ i
TEST 2	10.4.5.1 (TCP/389)	✓	✓	Disabled i	Search error: (cn=*)	Fix previous!	Fix previous!
TEST 3	172.28.217.6 (TCP/389)	✓	✓	Disabled i	Search error: (cn=*)	Fix previous!	Fix previous!
TEST 4	ldap2.glipi-labo.eu (TCP/389)	✓	✓	Disabled i	Search error: (cn=*)	Fix previous!	Fix previous!

Bind user / password authentication is disabled, which means your LDAP server allows anonymous requests, or authenticates with a key. If it's voluntary, don't worry. If the following tests are in error, you should check this authentication! Maybe it's ultimately necessary :)

Each directory has a number of tests which may or may not be validated depending on your configuration:

- *Flux TCP*
- *BaseDN*
- *LDAP URI*
- *Bind Auth*
- *Generic search*
- *Filtered search*
- *Attributes*

As soon as one of the tests fails, the following tests will not be performed. You must start by correcting the 1st anomaly before the other tests are run.

---

More satisfaction

---

## 28.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

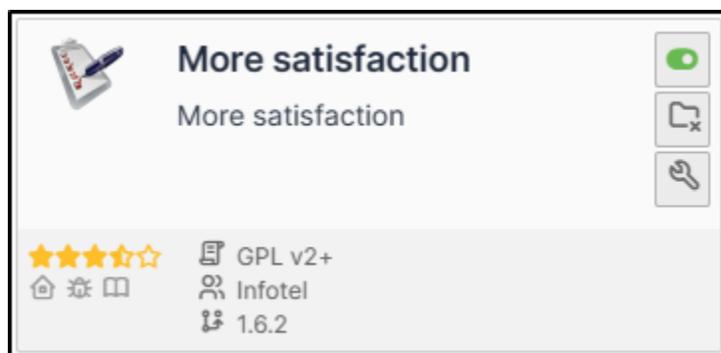

---

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available on [Cloud](#).

---

## 28.2 Install the plugin

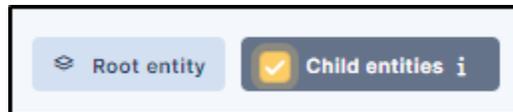

- Go to the marketplace. Download and install the plugin **More satisfaction**

## 28.3 Create a survey

- Once installed, go to **Administration** > **Satisfaction survey**
- Click on **Add**
- Name your survey and set it as active
- Also remember to tick the sub-entity box if you want it to be available to all child entities
- Then click on **Add**

**Предупреждение:** It is only possible to create one survey per entity. If you wish to create several for different entities, remember to position yourself in the appropriate entity and do not tick the sub-entity box

## 28.4 Create a question

- Enter your survey and go to the **Question** tab
- Click on **Add a question**
- Select the type of question **Yes/No** and enter the text that suits you
- Then click **Add**

## 28.5 Create a text field

- In the question tab, click on **Add a question**
- Select the **Text** type
- Enter the text to be displayed and click **Add**

The screenshot shows the 'Add a question' form in the 'Satisfaction survey - Ticket satisfaction' section. The 'Questions' tab is active, showing 2 questions. The form includes a 'Question' field with the text 'Do you have any additional comments on the processing of your request?', a 'Type' dropdown set to 'Text', and a 'Comments' field. A 'Save' button is visible at the bottom right.

## 28.6 Create a note

- In the question tab, click on **Add a question**
- select the **Note** type
- You can select a score up to 10 and set a default value
- Click on «Add» when you are happy with your settings

The screenshot shows the 'Add a question' form in the 'Satisfaction survey - Ticket satisfaction' section. The 'Questions' tab is active, showing 2 questions. The form includes a 'Question' field with the text 'How would you rate the overall processing of your application?', a 'Type' dropdown set to 'Note', a 'Note on' dropdown set to '5', and a 'Default value' dropdown set to '3'. An 'Add' button is visible at the bottom right.

## 28.7 Preview

The preview tab allows you to see what users will receive once their ticket has been closed

The screenshot shows the 'Preview' tab in the 'Satisfaction survey - Ticket satisfaction' section. The 'Preview' tab is active, showing 3 questions. The first question is 'Are you satisfied with the way your incident was handled?' with a 'No' dropdown. The second question is 'Do you have any additional comments on the processing of your request?' with a text area. The third question is 'How would you rate the overall processing of your application?' with a 5-star rating system.

## 28.8 Translation

You can translate each of the questions asked in the questionnaire into the language of your choice

- Go to the **Translations** tab
- Choose the language you want and then, question by question, write the translation

## 28.9 Schedule reminders

In the event of a non-response to the survey, you can send out reminders to follow-up with the user. You can create your own reminder or select a predefined one

### 28.9.1 Customised reminder

- Go to the **Reminders** tab
- Click on **Add a reminder**.
- **Enter a :**
  - **Name**
  - **Type of duration (day or month)**
  - The **duration** of the reminder
  - **Activate** your reminder

## 28.9.2 Predefined reminder

- Go to the **Reminders** tab
- Click on **Add a predefined reminder**
- You will have 3 options to choose from:

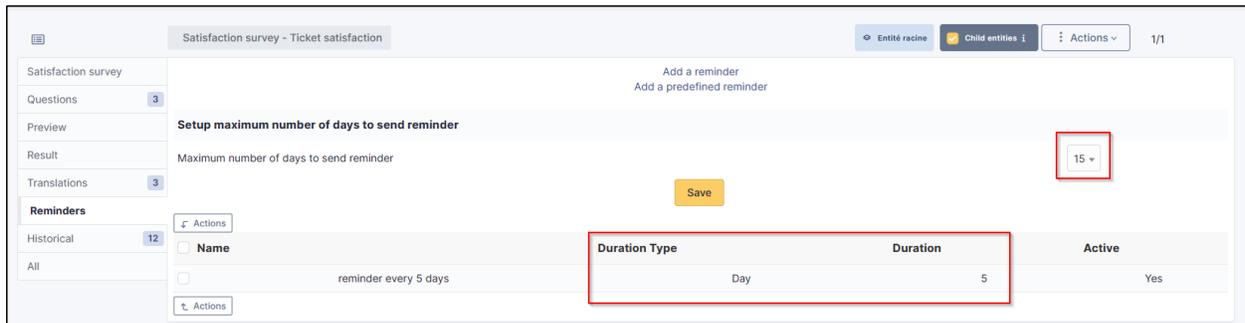

- 1 week: reminder every 7 days,
- 2 weeks: reminder every 14 days.
- 1 month: monthly reminder.
- Select the option that suits you and click on **Add**

## 28.9.3 Limit the number of reminders

- In the **Setup maximum number of days to send reminder** section, enter a limit for the **Maximum number of days to send a reminder**

**Example** : If a person has not responded after 3 reminders, GLPI will no longer send reminders and the satisfaction survey will then remain unanswered

## 28.10 Set up the automatic action

Survey reminders are sent via an automatic action already created by the plugin. Make sure that this is activated and set up correctly

- Go to **Setup > Automatic actions**
- Select the **SatisfactionReminder** action.

The screenshot displays the configuration page for the 'Automatic action - SatisfactionReminder' plugin. On the left, a sidebar contains navigation links: 'Automatic action', 'Statistics', 'Logs' (with a count of 29), 'Historical' (with a count of 1), and 'All'. The main content area is titled 'Automatic action - SatisfactionReminder' and contains the following configuration options:

- Name:** Satisfaction - SatisfactionReminder
- Description:** Send automaticaly survey reminders
- Run frequency:** Each day
- Status:** Scheduled
- Run mode:** CLI
- Run period:** 0 -> 24
- Number of days this action logs are stored:** 30

## 28.11 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

## 29.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available from the [Cloud](#).

---

## 29.2 External Authentication

The plugin uses GLPI's **External Authentication** functionality and to be functional, it needs some initial Setup.

- Go to **Setup > Authentication > Other authentication methods**
- In the **Other authentication transmitted in the HTTP request** section
- The **Storage fields for the identifier in the HTTP request** field must be defined, usually **HTTP\_AUTH\_USER**.
- The **Delete the domain from identifiers of the form identifier@domain** field can be set to **Yes** or **No**.

---

**Примечание:** In the case of authentication via SSO, the option **Delete the domain of identifiers in the form identifier@domain** can be set to **Yes**, which will allow 2 user records to be merged if they are already present in the database (internal or LDAP(S)).

**Предупреждение:** Be careful because this option is subject to identity theft. If your application is open to users other than your own, it is possible that one user could be merged with another. For example, **john.doe@mondomaine.fr** has a namesake but a different email address **john.doe@unautredomaine.fr**. By deleting the domain, the 2 records will be merged and the John Does will have the same account.

The users who are going to authenticate themselves will not be known to GLPI, so it is necessary to populate certain fields to create their record in GLPI with a minimum of information.

The fields that can be retrieved by SSO are as follows:

- Last name : **givenName**
- First name: **familyName**
- Email: **email**
- Email2: **email2**
- Telephone number: **phone**
- Mobile: **mobile**
- Title: **title**
- Language: **language**

Other authentication sent in the HTTP request	Enabled
Field storage of the login in the HTTP request	HTTP_AUTH_USER <input type="button" value="i"/> <input type="button" value="+"/>
SSO logout url	<input type="text"/>
Remove the domain of logins like login@domain	No <input type="button" value="v"/>
Surname	givenName
First name	familyname
Comments	<input type="text"/>
Administrative number	<input type="text"/>
Email	email
Email 2	email2
Email 3	email3
Email 4	email4
Phone	phonenumber
Phone 2	phone2
Mobile phone	mobile
Title	title
Category	<input type="text"/>
Language	language
<input type="button" value="Save"/>	

- Save your Setup

You must also activate the automatic addition of users in GLPI to create them in GLPI at the time of authentication

- In the **Setup > Authentication > Setup** menu
- The **Automatically add users from external authentication sources** field must be changed to **Yes**

Authentication	
Automatically add users from an external authentication source	Yes ▾
Action when a user is deleted from the LDAP directory	Preserve ▾
GLPI server time zone	GMT ▾
Add a user without accreditation from a LDAP directory	Yes ▾
Action when a user is restored in the LDAP directory	Do nothing ▾
<a href="#">Save</a>	

## 29.3 Fetch information from user profile option

You can choose if you want to retrieve informations from the user profile. In **setup > OAuth SSO applications** select yes or no as required.

**Важно:** If **OAuth SSO** is your **only source of authentication AND provisioning**, we recommend that you set the **Fetch information from user profile option** to **Yes** so that user information can be fetched. Please note that claims must also be set correctly on the provider side.

If you are using an **external provisioning source** such as SCIM, we recommend that you set the **Fetch information from user profile option** to **No** so that user information is not overwritten and replaced by that of the OAuth SSO plugin.

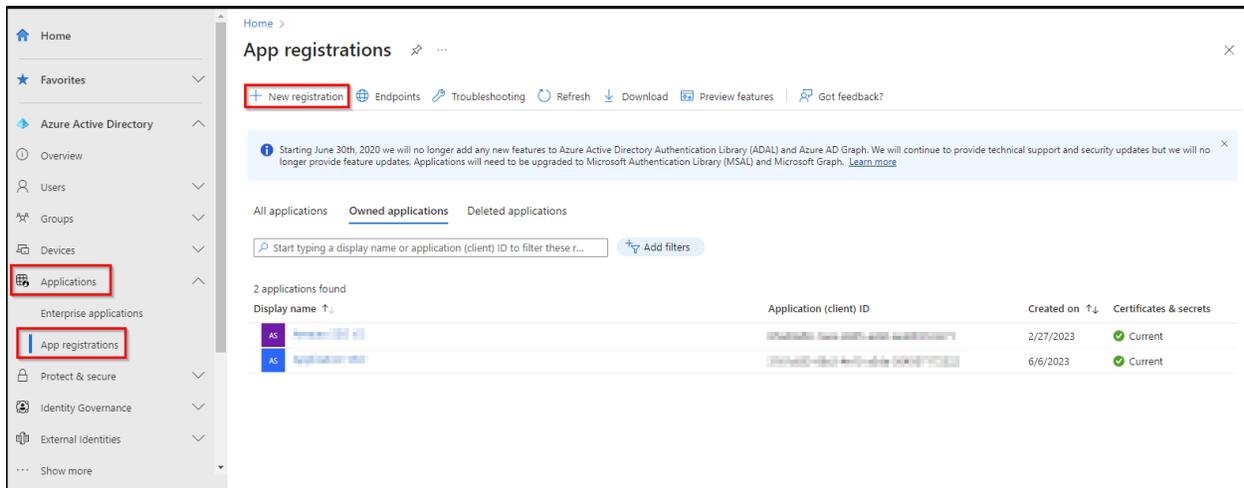

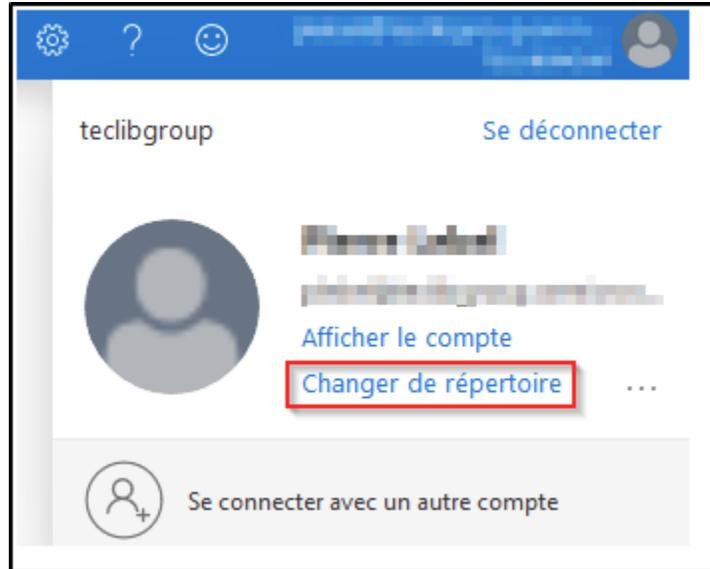

## 29.4 Entra

### 29.4.1 Register your application in Entra

First, register your application with your Entra Active Directory (Entra AD) client. This will provide you with an application ID for your application and allow it to receive tokens.

- Connect to the [Entra portal](#)
- Choose your Entra AD tenant by selecting your account in the top right corner of the page. Then select the **Change directory** navigation bar, then the desired tenant
- Skip this step if you only have one Entra AD tenant under your account or if you have already selected one
- In the Entra Portal, search for and select **Entra Active Directory**
- From the left-hand **Active Directory** menu
- select **Application Registrations**
- Then **New Registration**.
- Enter **web** in the redirect URI and paste the return URL of your GLPI instance:

Home > App registrations >

## Register an application

**\* Name**  
The user-facing display name for this application (this can be changed later).

Oauth SSO - Azure V2 ✓

**Supported account types**  
Who can use this application or access this API?

- Accounts in this organizational directory only (This application is only available to users in your organization) - Single tenant
- Accounts in any organizational directory (Any Azure AD directory - Multitenant)
- Accounts in any organizational directory (Any Azure AD directory - Multitenant) and personal Microsoft accounts (e.g. Skype, Xbox)
- Personal Microsoft accounts only

[Help me choose...](#)

**Redirect URI (optional)**  
We'll return the authentication response to this URI after successfully authenticating the user. Providing this now is optional and it can be changed later, but a value is required for most authentication scenarios.

Web e.g. https://example.com/auth

By proceeding, you agree to the [Microsoft Platform Policies](#)

**Register**

New Item - Oauth SSO application

Field used as login

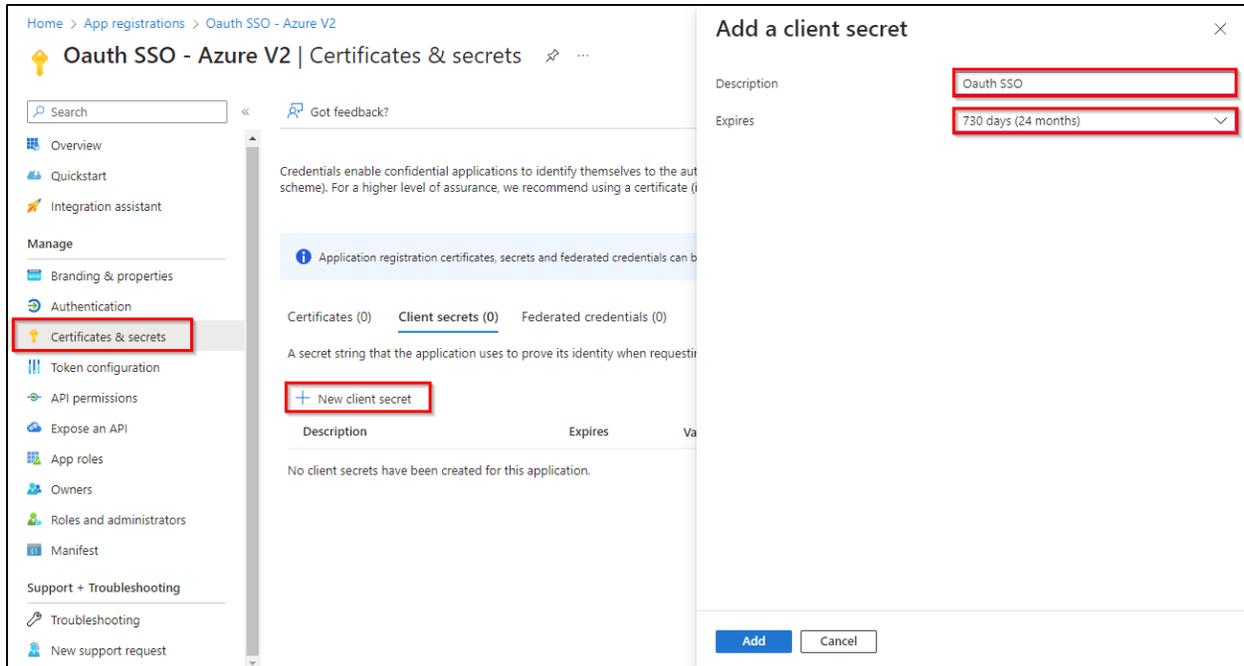

Show debug informations on failure: No

Callback url: https://[redacted]glpi-network.cloud/marketplace/oaui

+ Add

## 29.4.2 Secret and certificate

- In the **certificates and secrets** tab, create a new secret that will need to be transferred to your OAuth SSO application on the GLPI side:

**Предупреждение:** When you click on add, the secret will only be available once. As soon as you leave this page, the secret will be hidden and we will no longer be able to access it. Remember to store it in a safe place as we will need it later

## 29.4.3 Claims

**Предупреждение:** If you are using SSO V2, an additional step is required. The **claims** on the Entra side **must be entered manually** and should preferably be of type **ID**.

- In the **Token configuration** tab
- Click on **Add an optional claim**
- Add the 4 claims below:

Search

« Got feedback?

## 29.4.5 Setup GLPI

- Entra AD provides a description with the essential information you need:

Home > App registrations > Oauth SSO - Azure V2

Search << Delete Endpoints Preview features

Got a second? We would love your feedback on Microsoft identity platform (previously Azure AD for developer). →

Essentials

Display name  
Oauth SSO - Azure V2

Application (client) ID  
395dd420-9a14-4110-84cc-5f02061f1881

Object ID  
c94b62a9-7631-4168-8d78-89f210d30903

Directory (tenant) ID  
3c2a...

Supported account types  
My organization only

Client credentials  
0 certificate, 1 secret

Redirect URIs  
1 web, 0 spa, 0 public client

Application ID URI  
Add an Application ID URI

Managed application in local directory  
Oauth SSO - Azure V2

- Specify an application **name** visible to end users.

New Item - Oauth SSO application

Name: My account

Comments: [Empty text area]

Active: Yes

Icon on login page: windows

Client secret: [Redacted]

Tenant ID: 3c2ae83b-7e79-4bc8-8d80-5ba10f272030

Fetch information from user profile: Yes

Callback url: https://testing.with18.glpi-network.cloud/marketplace/oauth

Oauth provider: Azure

Client ID: 395dd420-9a14-4110-84cc-5f02061f1881

Field used as login: User Principal Name (upn)

Endpoint version: v2.0

Show debug informations on failure: No

+ Add

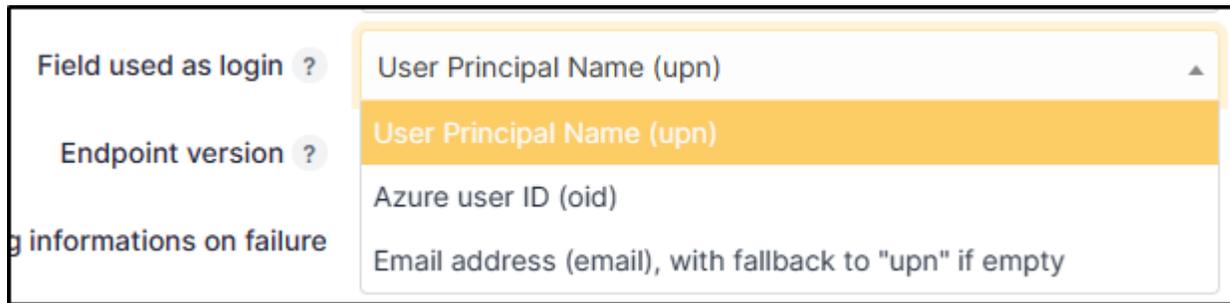

Copy the values from the fields above:

- Application ID
- The holder ID
- The **value** of the secret copied in the previous step

**Предупреждение:** Please check that the **value** of the secret is filled in correctly. If the ID of the secret is copied, your application will fall into error.

### 29.4.6 Explanation of ID field

- 3 values are available in this insert:

- 1) **User Principal Name (UPN)**: this option will show the full username of the user logging in (nom.prenom@mondomaine.com for example). If you want only the username to be visible (without the @mondomaine.com, see the **XXXXXXXXXXXX** paragraph).
- 2) **Entra user ID (OID)**: this option takes the object ID from the Entra AD. This ID will be used for the user login

User principal name	collecteur-mail@... com	Group membe...	3
Object ID	d924...	Applications	1
Created date time	Oct 28, 2022, 3:45 PM	Assigned roles	0
User type	Member	Assigned licen...	0
Identities	...		

- 3) **Email address**: This option specifies the user's email address. This field will be used for the login. If it is empty, the UPN will be used.

If you need to find your application in the Entra portal, select **Application subscriptions**, then **Display all applications**.

## 29.5 Google

### 29.5.1 Creating a project

- From your [Google console](#) (administrator access is required)
- Go to your organisation then new project
- Enter the name of your project
- Click on **Create**
- Return to your organisation,
- Select your project

**Project name \*** ?  
 OAuth GLPI

Project ID: oauth-glpi-407811. It cannot be changed later. [EDIT](#)

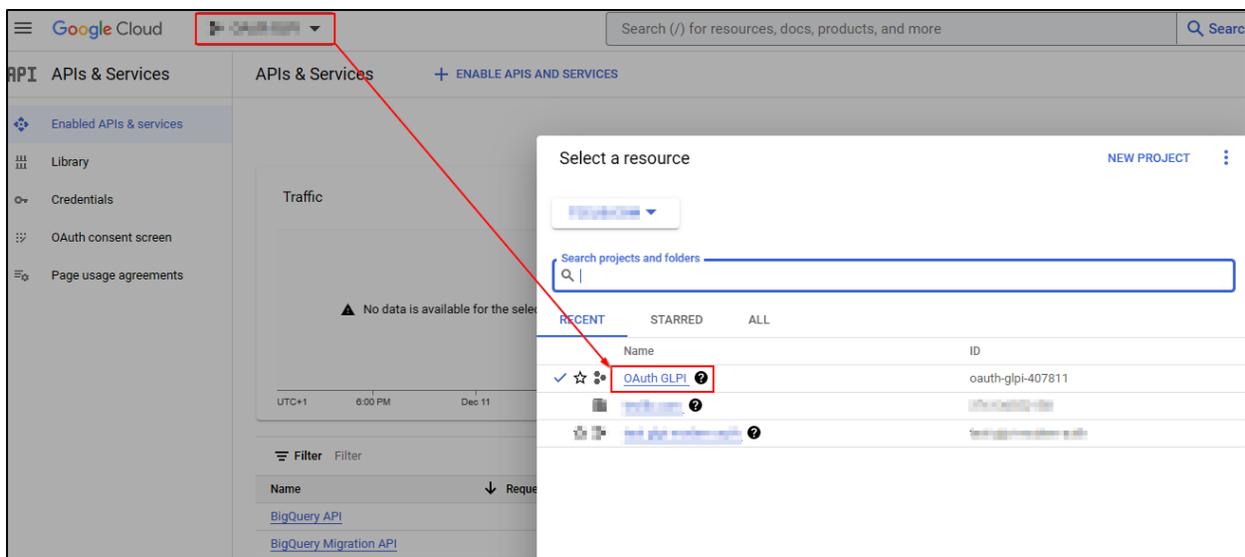

**Organization \*** ▼ ?  
 [Redacted]

Select an organization to attach it to a project. This selection can't be changed later.

**Location \*** BROWSE  
 [Redacted]

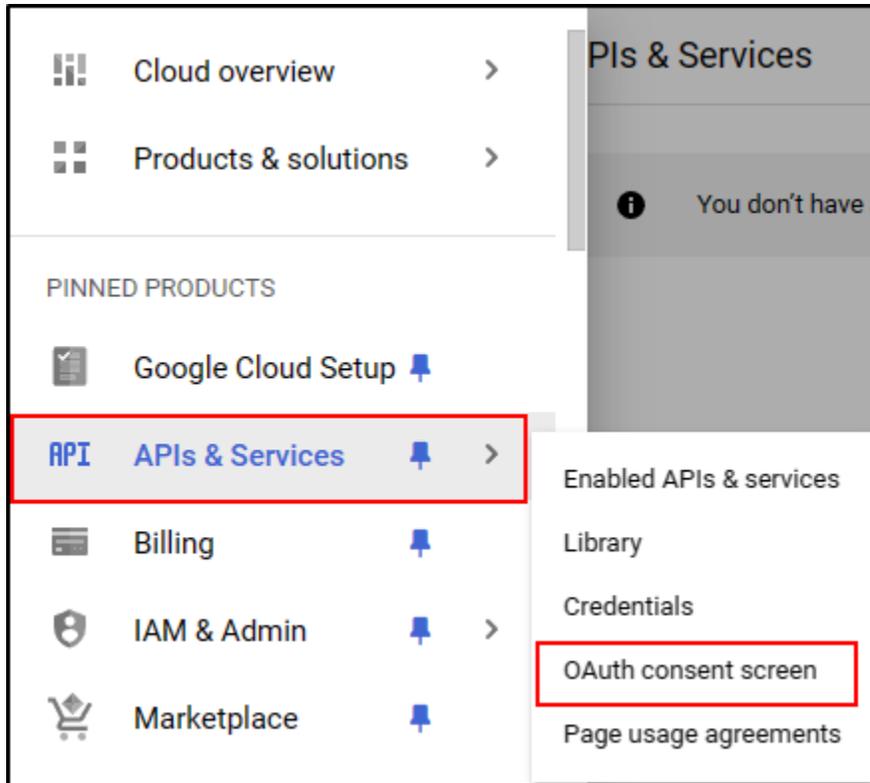

Parent organization or folder

**CREATE**      **CANCEL**

## 29.5.2 Setup OAuth access

- From the menu, click on **APIs & Services**
- Then **OAuth consent screen**

- Select the type of access that will be granted to the application (internal or external users)
- Then click on **Create**.
- Enter (as a minimum) a name for the application, an email address for application support and the developer's email address (this information is compulsory).
- Click on **Save and continue**.
- In the **Scope** section
- Click on **Add or remove application fields**
- Add **auth/userinfo.email** **auth/userinfo.profile** and **openid**
- Click on **Update**
- Then **Save and continue**

Choose how you want to configure and register your app, including your target users. You can only associate one app with your project.

### User Type

Internal 

Only available to users within your organization. You will not need to submit your app for verification. [Learn more about user type](#) 

External 

Available to any test user with a Google Account. Your app will start in testing mode and will only be available to users you add to the list of test users. Once your app is ready to push to production, you may need to verify your app. [Learn more about user type](#) 

CREATE

[Let us know what you think](#) about our OAuth experience

### ✕ Update selected scopes

**i** Only scopes for enabled APIs are listed below. To add a missing scope to this screen, find and enable the API in the [Google API Library](#) or use the Pasted Scopes text box below. Refresh the page to see any new APIs you enable from the Library.

**Filter** Enter property name or value ?

<input checked="" type="checkbox"/>	API ↑	Scope	User-facing description
<input checked="" type="checkbox"/>		.../auth/userinfo .email	See your primary Google Account email address
<input checked="" type="checkbox"/>		.../auth/userinfo .profile	See your personal info, including any personal info you've made publicly available
<input checked="" type="checkbox"/>		openid	Associate you with your personal info on Google

### Manually add scopes

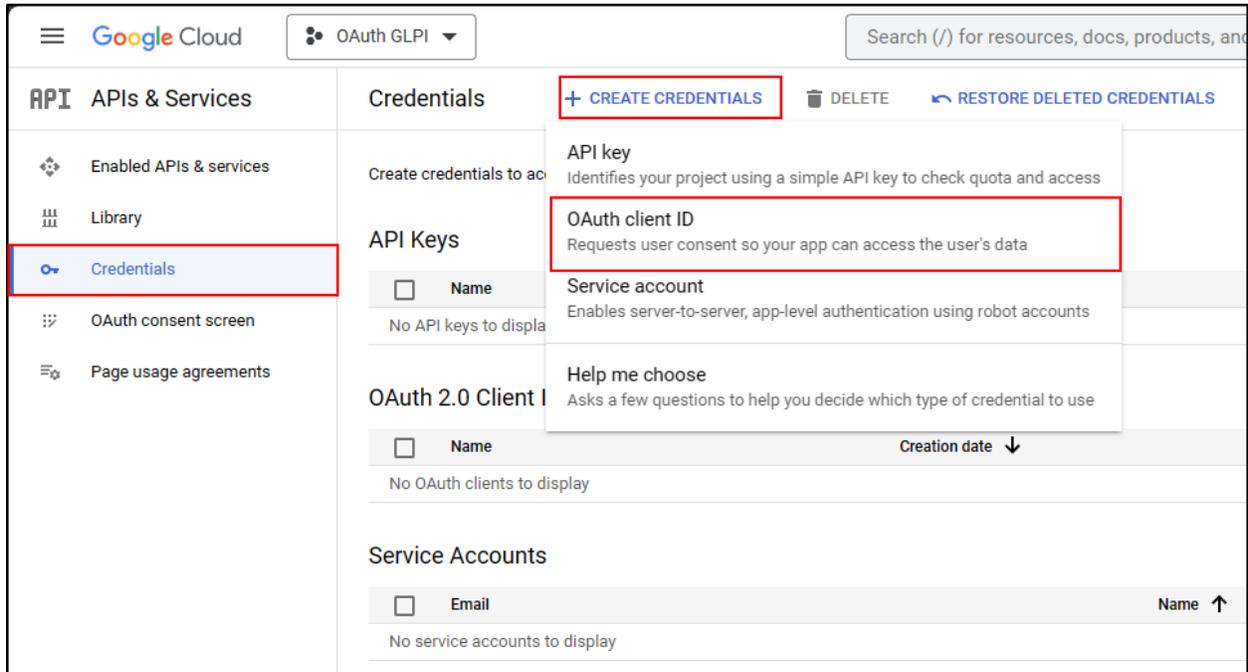

If the scopes you would like to add do not appear in the table above, you can enter them here. Each scope should be on a new line or separated by commas. Please provide the full scope string (beginning with "https://"). When you are finished, click "Add to table".

ADD TO TABLE

**UPDATE**

### 29.5.3 ID settings

- From the **Credentials** menu
- Click on **Create credentials**
- Then **Oauth client ID**.

- Select the type of application **Web application**
- Enter an application name
- In the **Authorized redirect URIs** section
- Enter the **GLPI Callback URL**

**Совет:** Where can I find my callback URL?

- Click on **Create**
- A page appears with the identifier values. **Keep this information** as it will be requested in GLPI.

## OAuth client created

The client ID and secret can always be accessed from Credentials in APIs & Services

**i** OAuth access is restricted to users within your organization unless the [OAuth consent screen](#) is published and verified

Client ID	 [REDACTED] [REDACTED]aktnjkg0k1gse37.apps.googleusercontent.com 
Client secret	 [REDACTED] [REDACTED]ZqL3x7yNV 
Creation date	December 11, 2023 at 12:55:33 PM GMT+1
Status	 Enabled

 [DOWNLOAD JSON](#)

[OK](#)

## 29.5.4 Setup GLPI

- From **Setup > OAuth SSO applications**
- Click on **Add**
- Select **Google** in the **OAuth provider** field
- Select the icon that will be visible on the home page
- Enter the **Client ID** (number 1 on the previous screenshot)
- Enter the **Client secret** (numbered 2 on the previous screenshot)
- Enter the **field user ID**<sup>1</sup>

- Click on **Add**

From the home page, the new OAuth SSO login option will be visible:

**Примечание:** The first time a user logs on, they will be asked to accept access authorisations for their profile

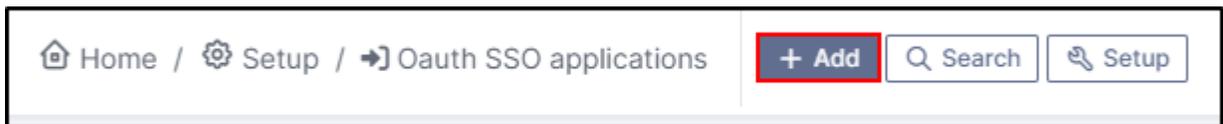

## 29.6 OKTA

### 29.6.1 Create application

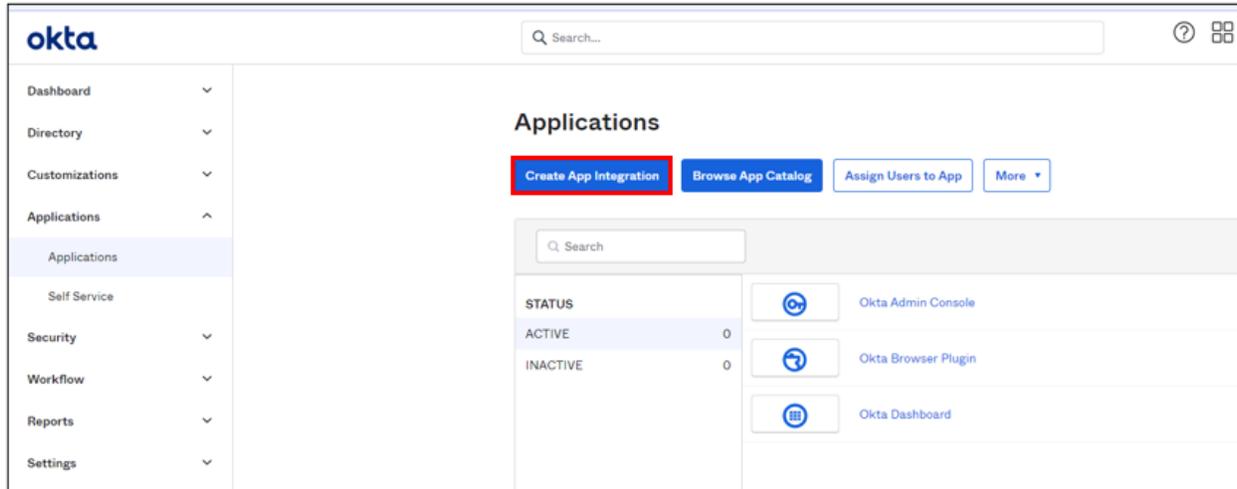

- First, go to GLPI and download the Oauthsso plugin
- Navigate to the **Setup > OAuth SSO applications**
- Click on **Add**
- Keep this window active and retain the callback URL :
- In your OKTA interface, go to **Applications**
- **Create App Integration**

<sup>1</sup> the identifier field will be the user's login. **Google user Id** represents the unique value for each user generated when the user is created.

New item - Oauth SSO application

Name	<input type="text"/>	Comments	<input type="text"/>
Active	No <input type="button" value="v"/>	Oauth provider	----- <input type="button" value="v"/>
Icon on login page	----- <input type="button" value="v"/>	Client ID	<input type="text"/>
Client secret	<input type="text"/>	Field used as login ?	<input type="text"/>
Fetch information from user profile ?	No <input type="button" value="v"/>	Show debug informations on failure	No <input type="button" value="v"/>
Callback url	<input type="text" value="https://[redacted].glpi-network.cloud/marketplace/oauth"/>		

- Select option **OIDC – OpenID Connect** in the 1st insert and **Web Application** in the second
- Click on **Next**
- Enter an application name and check the box **Client credentials**
- Enter the return URL, retrieved above, in Sign-in redirect URIs.

## 29.6.2 Assignments

- In the last box, select the option that suits you best (here we authorize all users present in OKTA)
- Finally, click on **Save**

## 29.6.3 Setup GLPI

- In GLPI, go back to the Oauth SSO plugin configuration window and enter your OKTA tenant information :
  1. Give your provider a name, which will appear on the login page.
  2. Indicate this as active
  3. Enter OKTA as provider Oauth
  4. Enter the application ID found in the application previously created in OKTA
    1. Specify the ID field to be mapped with OKTA
    2. Specify the customer secret available in OKTA in the previously created application
  7. Enter the name of your OKTA instance (<https://XXXXXXXXXX.okta.com>), available in the account creation confirmation e-mail.
- Click on **Add**
- In the plugin, you will see the approval message:

Now that the configuration is complete, you can test it with a user.

## Create a new app integration X

**Sign-in method**  
[Learn More](#)

- OIDC - OpenID Connect**  
Token-based OAuth 2.0 authentication for Single Sign-On (SSO) through API endpoints. Recommended if you intend to build a custom app integration with the Okta Sign-In Widget.
- SAML 2.0**  
XML-based open standard for SSO. Use if the Identity Provider for your application only supports SAML.
- SWA - Secure Web Authentication**  
Okta-specific SSO method. Use if your application doesn't support OIDC or SAML.
- API Services**  
Interact with Okta APIs using the scoped OAuth 2.0 access tokens for machine-to-machine authentication.

---

**Application type**  
What kind of application are you trying to integrate with Okta?

Specifying an application type customizes your experience and provides the best configuration, SDK, and sample recommendations.

- Web Application**  
Server-side applications where authentication and tokens are handled on the server (for example, Go, Java, ASP.Net, Node.js, PHP)
- Single-Page Application**  
Single-page web applications that run in the browser where the client receives tokens (for example, Javascript, Angular, React, Vue)
- Native Application**  
Desktop or mobile applications that run natively on a device and redirect users to a non-HTTP callback (for example, iOS, Android, React Native)

[Cancel](#) [Next](#)

## 29.7 Keycloak

### 29.7.1 Create a REALM

- After installing keycloak, go to the admin console:

<http://XXXXXXXXXX:8080/admin> or <https://XXXXXXXXXX:8080/admin>

- Create your **realm** by clicking on **master** at the top left of your screen
- Then **create Realm**
- Give it a name that suits you
- Click on **Create**

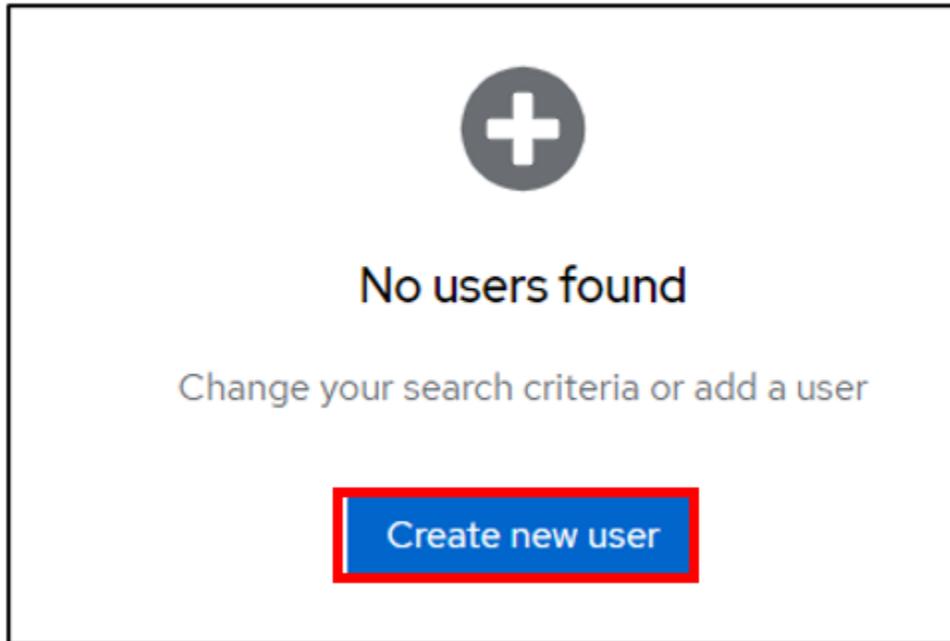

### 29.7.2 Create user

- Then go to the **Users** tab
- Then **Create new user** (we'll use a local user, but you can synchronize your LDAP if necessary)
- Create your user according to your needs, remembering to check the Email verified box
- Click on **Create** once you've entered your details.
- Stay in your user file and click on **Credentials**
- Then **Set password**
- Configure the user password, taking care to indicate that the password is not temporary
- Click on save then **Save password**

You can check that your configuration is correct by logging on to the user account console:

<http://XXXXXXXXXX/realms/GLPI/account/#/> or <https://XXXXXXXXXX/realms/GLPI/account/#/>

Users > Create user

### Create user

Username \*

Email

Email verified  On

First name

Last name

Required user actions

Groups

Users > User details

igor

Details Attributes **Credentials** Role mapping Groups Consents Identity provider links Sessions

No credentials

This user does not have any credentials. You can set password for this user.

**Set password**

[Credential Reset](#)

### Set password for igor ×

Password \*  

Password confirmation \*  

Temporary   Off

**Save** Cancel

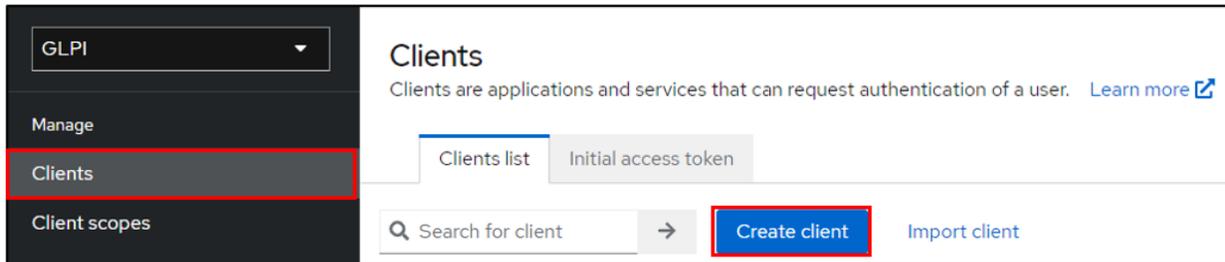

(Remember to adapt the realm name if you haven't named it GLPI).

You will then be able to connect to the record of the previously created user or one of your LDAP users.

### 29.7.3 Create client

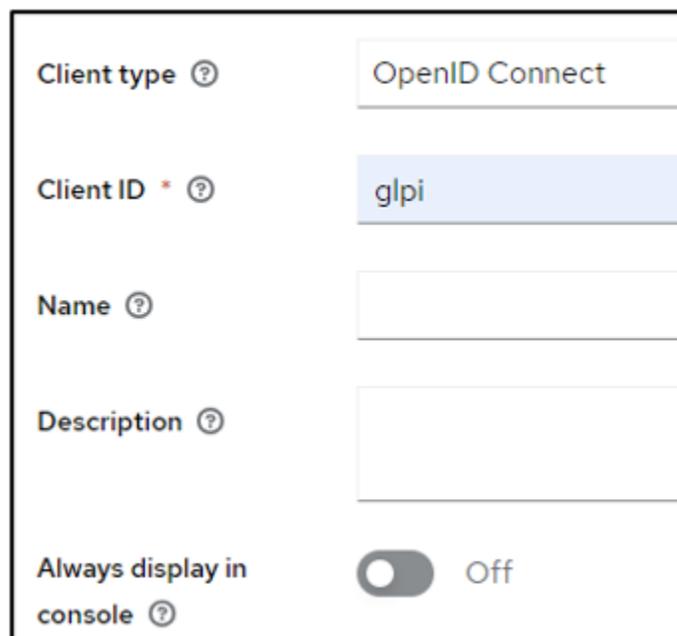

Now we can register our GLPI application with Keycloak

- Go to **Clients**
- Create client

- Give your application a client ID, which you'll need to pass on to your GLPI OAuth SSO configuration
- Click on next and make sure on the next page that the **standard flow** and **client authentication** options are active
- Click on **Save**

Keep this page active, we'll come back to it later.

A screenshot of the 'Create client' form in Keycloak. The form is displayed in a light gray container. It contains the following fields:

- Client type**: A dropdown menu with 'OpenID Connect' selected.
- Client ID**: A text input field containing 'glpi'.
- Name**: An empty text input field.
- Description**: An empty text input field.
- Always display in console**: A toggle switch currently in the 'Off' position.

## 29.7.4 Setup GLPI

- Go to GLPI
- In **Setup > Oauth SSO applications** click on **add** (at the top of your screen)

- Start by retrieving the return URL and pasting it into Keycloak's **valid redirect URIs** field
- Back in GLPI's Oauth SSO plugin configuration, fill in the required fields:
  1. Give your provider a name, which will appear on the login page for users
  2. Activate this plugin so that it is visible and usable on the login page
  3. Choose Keycloak as your Oauth provider
  4. Enter the client name set above
  5. Retrieve client secret from Keycloak (client, client\_name, credentials)
  6. Enter the discovery URL: <http://mondomaine/realms/monrealms/.well-known/openid-configuration>.
- Click on **Add**

In the plugin, to see the approval message:

Now that configuration is complete, you can test the connection with the user you created earlier, or with your LDAP user.

## 29.8 Rules for assigning authorisations

Remember that Oauth SSO authentication allows **only authentication**, in the sense that no user management is carried out following authentication.

In most cases, it will therefore be necessary to establish rules for assigning authorisations to your users (to give them a profile, for example).

- To do this, go to **Administration > Rules > Rules for assigning authorisations to a user**.

There are no 'mandatory' rules, it's up to you to create the rule(s) that you feel best suit your needs according to your available criteria.

For example, a very simple rule

- A very simple rule -> *I want my users with SSO authentication to obtain the Self-Service profile.*

So I set my criteria and my action :

Nom

## 29.9 Forcing SSO authentication

Using the Oauth SSO application configuration, you can mask the internal database connection field to **force** the connection with your SSO application

(setup > Oauth SSO applications > setup)

## 29.10 Resources

- [Documentation Oauth SSO client for GLPI](#)
- [Documentation Microsoft Configure your App Service Or Entra Functions app to use Entra AD login](#)
- [Documentation OKTA Configure single Sign-On options](#)
- [Documentation Keycloak Managing OpenID connect Clients](#)

## 29.11 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

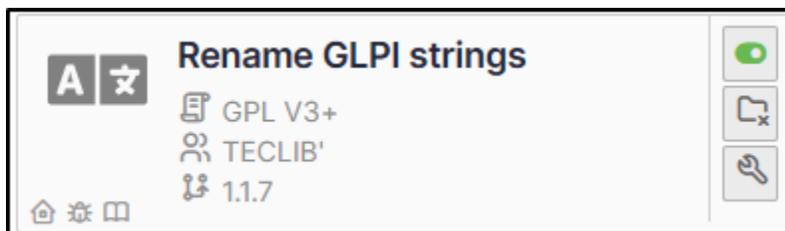

## 30.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available from the [Cloud](#)

## 30.2 Download the plugin

- Go to [Marketplace](#). Download and install the plugin **Rename GLPI strings**

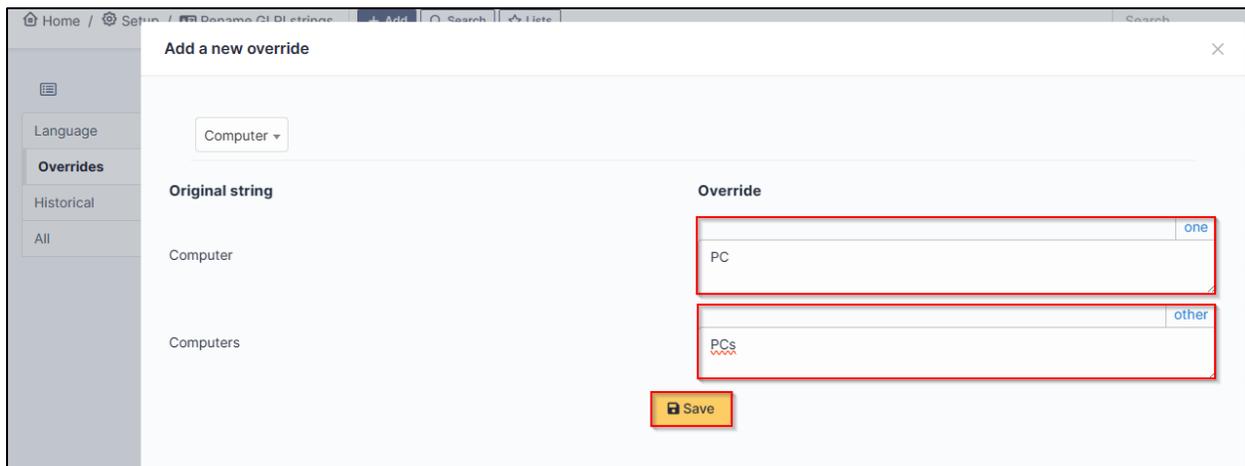

## 30.3 Creating an override

- Go to **Setup > Rename GLPI strings**
- Click on **Add** and select the appropriate language.
- In the **Override** tab, click on **New override**.
- Select the value you wish to change from the drop-down list. You can search directly.

We are going to change the value **Computer** to **PC**

- Select computer and enter the singular and plural of the word to be changed in the corresponding fields.
- Click on **Save**

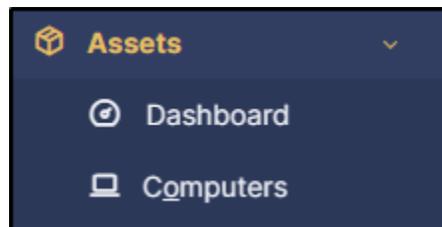

The screenshot shows the 'Add a new override' form. The 'Language' dropdown is set to 'Computer'. The 'Original string' column lists 'Computer' and 'Computers'. The 'Override' column has two input fields: the first is for 'one' and contains 'PC', and the second is for 'other' and contains 'PCs'. A 'Save' button is located at the bottom of the form.

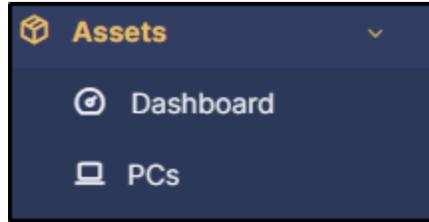

## 30.4 Show the change

You may not see the change immediately. To make it appear, log out and then log back in.

Before :

After :

## 30.5 FAQ

If you have any questions about using the plugin, please consult our [FAQ](#)

## 31.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

---

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available from the [Cloud](#).

---

This plugin let you provision your users and groups from an external identity provider using the SCIM protocol. The update from the directory to GLPI is done “just in time”. Each modification is done on the fly, without any cron. GLPI is the service provider, and the directory is the identity provider.

**Warning, the SCIM API endpoint provided by the plugin must be accessible from the identity provider.** If we talk about Azure or Okta, this particular url should be available from the internet. We suggest strongly to limit the ip addresses that can access this url (in addition of adding a strong authentication method).

## 31.2 Setup

You must declare an identity server in the plugin configuration (You can add any number). Go to **Setup > SCIM Identity servers** menu and click the **[+ Add]** button on top of the page.

The screenshot shows the GLPI interface for configuring a SCIM Identity server. The page title is "SCIM Identity server - test okta". The form is titled "SCIM configuration" and includes the following fields and options:

- Identity server name:** test okta
- Admin account used when updating GLPI data:** Delaunay Alexandre
- Default server:**
- Active:**
- Save requests in logs:**
- Method:** Basic
- Username:** test
- Password:** [masked]
- SCIM API URL:** Paste it in your identity provider. Example: `http://[::1]/glpi/10.0-git/plugins/scim/index.php/`

At the bottom right, there are buttons for "Delete Permanently" and "Save". The page footer indicates it was created on 16-02-2023 09:59 and last updated on 16-02-2023 14:11.

Fill at least:

- The name of the server,
- the user applied on GLPI when receiving a request (this will identify the user in the GLPI logs),
- check the “Active” field,
- and submit by clicking the **[+ Add]** button at the bottom of the form.

You’ll be given an API url you may paste into your identity provider configuration. Check [specific provider documentation](#) for more details.

You may set some optional parameters :

- **Save requests in logs:** if checked, all requests will be saved in the “Historical” tab of your declared server.
- **Default server:** if checked, this server will be used by default without providing its id in the API Url.
- **Security:** a dropdown of available security methods. Currently implemented:
  - **None:** no security, anyone can access the API.
  - **Basic:** HTTP Basic authentication. You must provide a username and a password.
  - **Digest:** HTTP Digest authentication. You must provide a username and a password.
  - **Bearer:** HTTP Bearer authentication. A long lived (10years) jwt token will be generated.
  - **OAuth2:** OAuth2 authentication. You must provide at least a valid redirection uri. We support the following flows:
    - \* Authorization code.

\* Client credentials.

Your SCIM server is now ready to receive requests from your identity provider.

## 33.2 Introduction

The **Translate** plugin for GLPI is a handy tool designed to enhance multilingual communication within your GLPI. Leveraging [DeepL](#)'s translation technology, this plugin provides a simple and effective solution for translating elements in the ticket timeline, fostering seamless collaboration within international teams.

Whether you're managing projects with teams scattered worldwide or simply aiming to facilitate communication with users in different languages, the Translate plugin streamlines the translation process within your GLPI instance.

## 33.3 Features

- Translate individual timeline elements
- Translate the entire ticket timeline
- Translate a follow-up during composition
- Restrict translation to specific languages
- Restrict translation to specific types of timeline elements
- API usage notification
- Translation rights management

## 33.4 Requirements

- GLPI version 10.0.10 or higher
- DeepL API token

## 33.5 Operation

### 33.5.1 Translating an Element

Translation of a ticket element is done by activating the translation button located at the top right of the element. The target language will correspond to the user's preferred language.

**If the translation button does not appear, it may be due to various reasons:**

- the plugin is not configured
- you do not have the right to translate
- your preferred language is not allowed in the configuration
- the element you want to translate is not allowed in the configuration

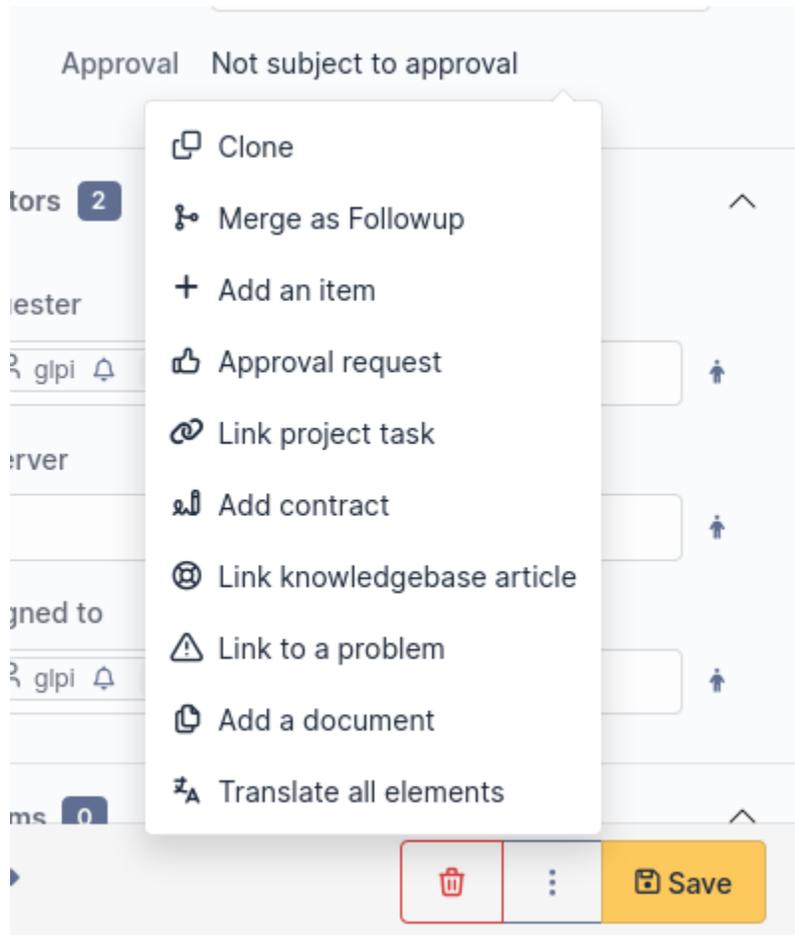

### 33.5.2 Undo Translation / Display Original Version

Once an element is translated, it will remain so until you request to undo the translation and display the original version. Displaying the original version is done through the same button used to translate an element, located at the top right of the element.

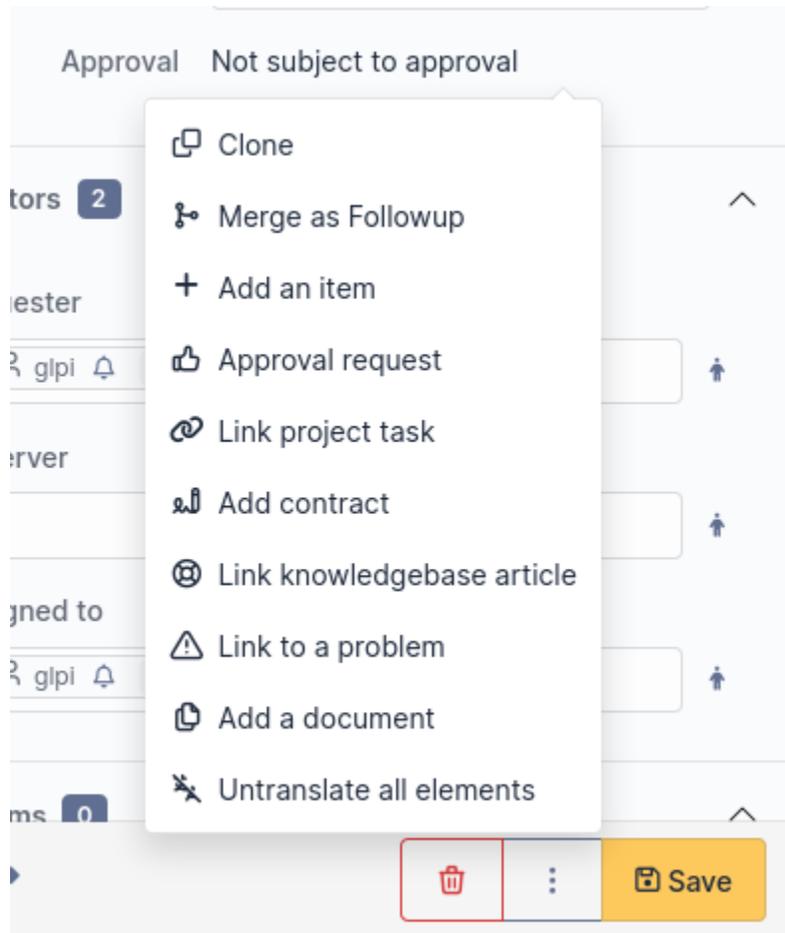

### 33.5.3 Translate Entire Timeline

It is possible to translate the entire timeline at once. To do this, display the additional options menu at the bottom right, next to the «Save» button. Then, click on «Translate all elements.»

### 33.5.4 Undo Translations / Display Original Versions of Entire Timeline

If all timeline elements are translated and you want to display their original versions, display the additional options menu at the bottom right, next to the «Save» button. Then, click on «Undo translation of all elements.»

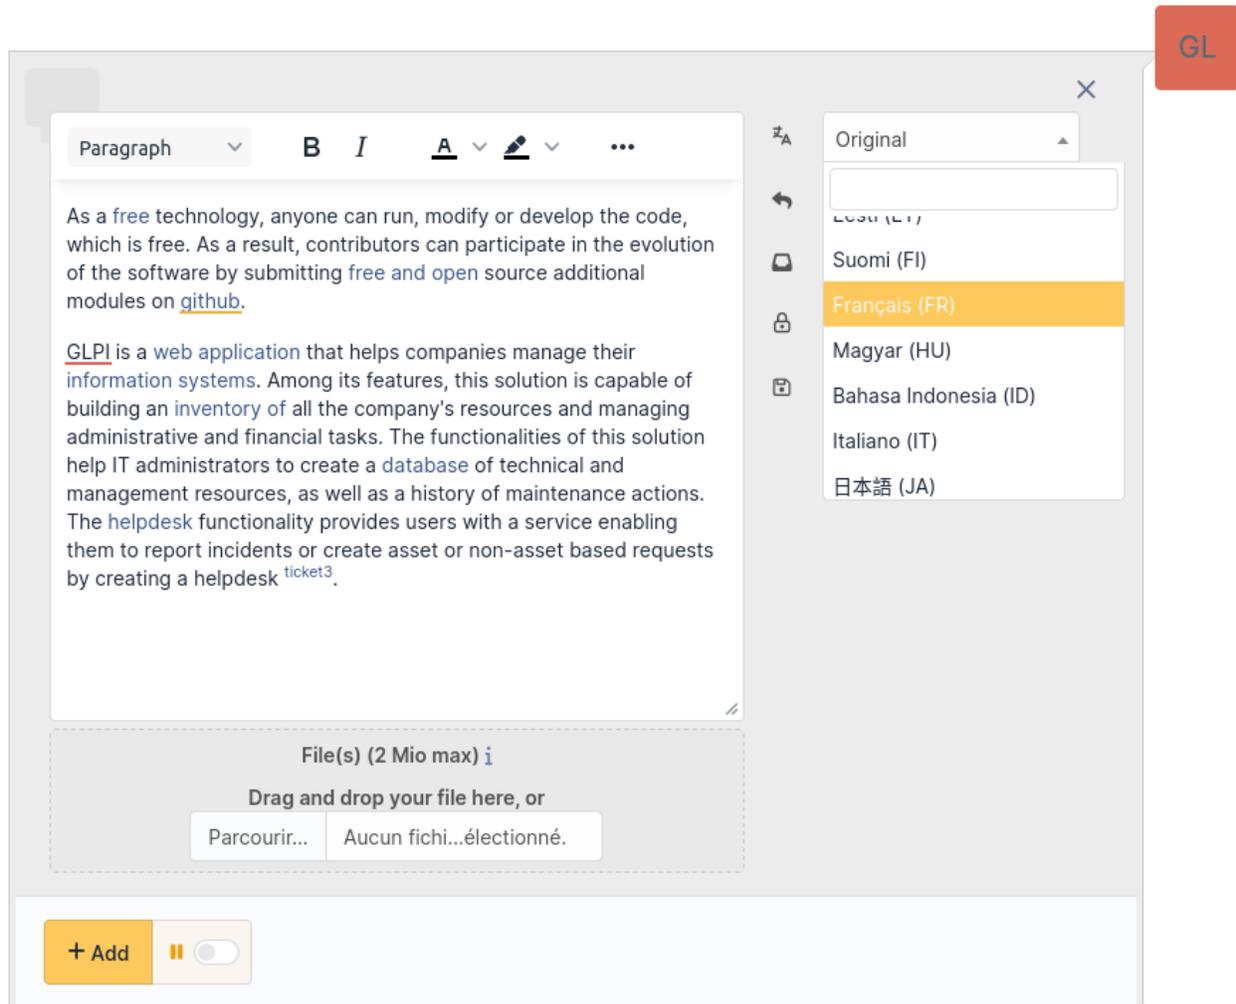

### 33.5.5 Translating a Follow-up during Writing

It is possible to translate a follow-up before it is sent. To do this, write your follow-up and click on the drop-down menu at the top right of the follow-up editing window. Finally, select the language in which the follow-up's content should be translated.

Once your follow-up is translated, you can revert to the original text by selecting the «Original» option in the previous language selection menu.

This feature is also available for tasks, validation requests, and solutions.

If the translation menu does not appear, it may be due to various reasons:

- the plugin is not configured
- you do not have the right to translate
- the element you want to translate is not allowed in the configuration

### 33.5.6 Persistence of Translations

To reduce character consumption and improve plugin performance, translations are saved in the database. This approach allows sharing translations among all users, avoiding the need to translate the same element multiple times in the same language.

Translation requests from a user for an element are also saved, automatically displaying the translated version when returning to a ticket's timeline.

If an element is modified, old translations will be considered obsolete. When a user requests a translation, a new translation will be performed for that element.

## 33.6 DeepL API Key

The **Translate** plugin uses the DeepL translation service. For this, a DeepL API key is required. DeepL offers two API plans, a free plan (limited to 500,000 characters per month) and a paid plan (at €4.99/month + €0.00002/character). Both plans are supported by the plugin.

### 33.6.1 Obtaining the API Key

1. Visit the DeepL website, «API» section (<https://www.deepl.com/pro-api>)

### Everything you need for translation in one place

- Best-in-class quality**  
Build your products and applications with DeepL's unbeatable translation accuracy and quality.
- Document translation**  
Translate entire Word (.docx), PowerPoint (.pptx), PDF (.pdf), text (.txt), and HTML (.html) files.
- Advanced data security PRO**  
Enjoy world-leading data protection standards and deletion of your texts immediately after translation.
- Formality**  
Choose the tone of your translations for languages with formal/informal pronouns.
- Language detection**  
Benefit from DeepL API's language
- Monthly cost control PRO**  
Easily limit your maximum monthly usage
- Handling XML**  
Simply translate text that contains XML
- API documentation**  
Access our API documentation at any time

2. Select a plan

### DeepL API Free

Get access to our DeepL REST API for FREE without any risk

**Free**

Your current plan

---

**DeepL API Free includes:**

- ✓ Access to all features
- ✓ Access to the DeepL REST API
- ✓ 500,000 character limit / month
- ✓ 1,000 glossaries (for specific languages) Ⓞ
- ✓ Upgrade to Pro anytime

RECOMMENDED

### DeepL API Pro

Use our API without limits

**€4.99 /month<sup>1</sup>**  
+ Usage based price

Upgrade

Cancellable monthly

---

**DeepL API Pro includes:**

- ✓ **Maximum data security** Ⓞ
- ✓ Access to the DeepL REST API
- ✓ No volume restrictions
- ✓ 1,000 glossaries (for specific languages) Ⓞ
- ✓ **Cost control settings**
- ✓ Pay as you go (€20.00 per 1,000,000 characters)

### DeepL API for Business

For large-scale, long-term API projects

**Custom pricing available**

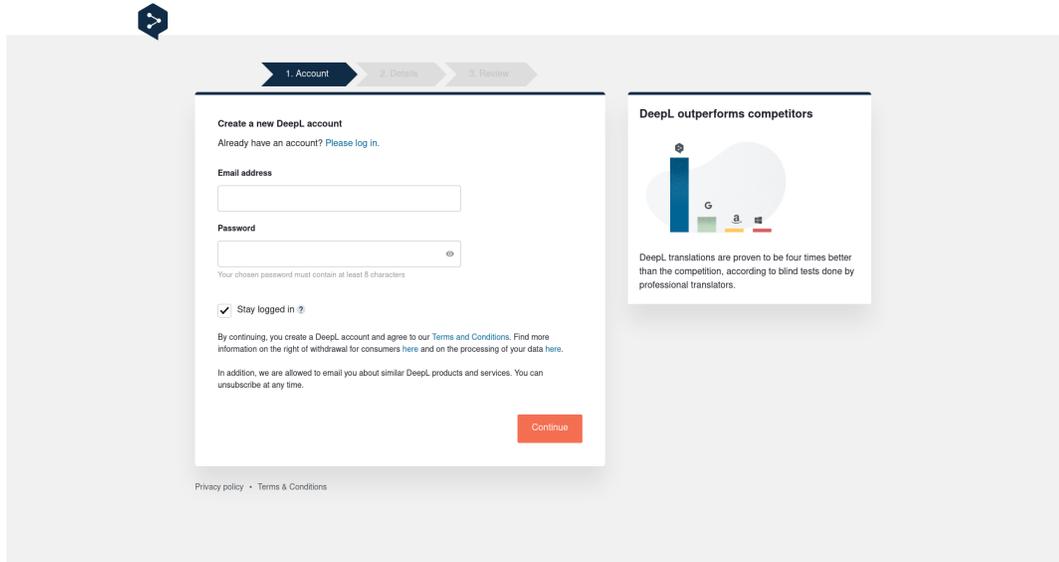

Contact us

---

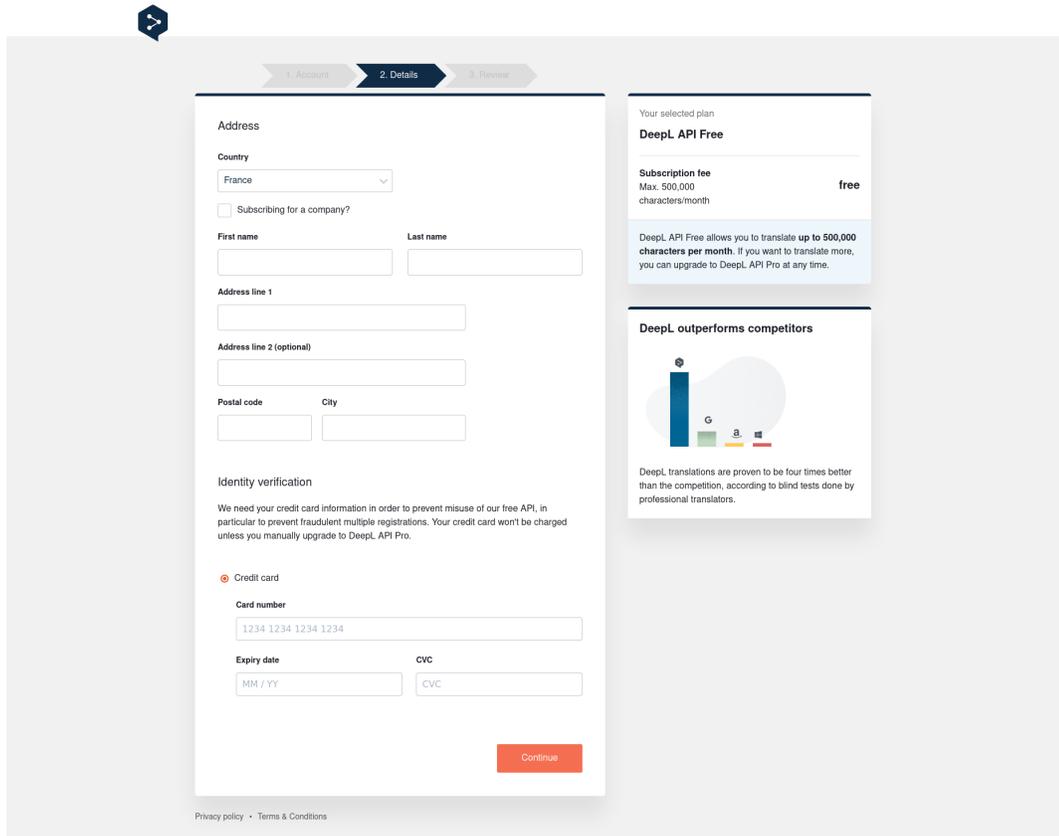

**Everything in DeepL API Pro, plus:**

- ✓ Custom pricing available
- ✓ Payment by invoice
- ✓ Eligible for a Customer Success Manager
- ✓ Eligible for onboarding planning and support

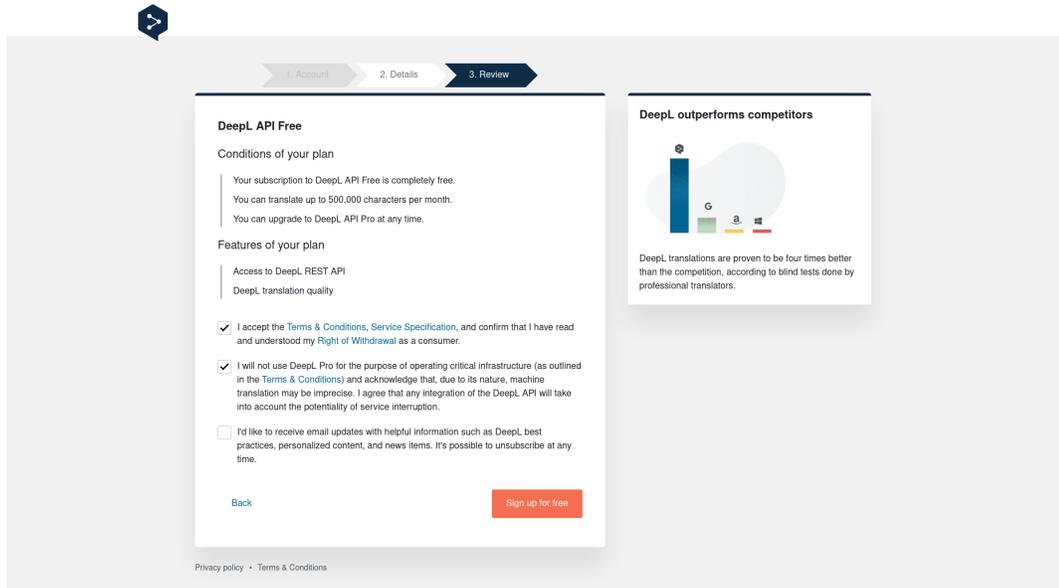

3. Log in or create an account

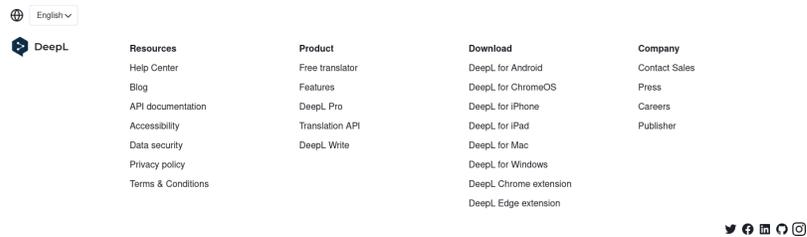

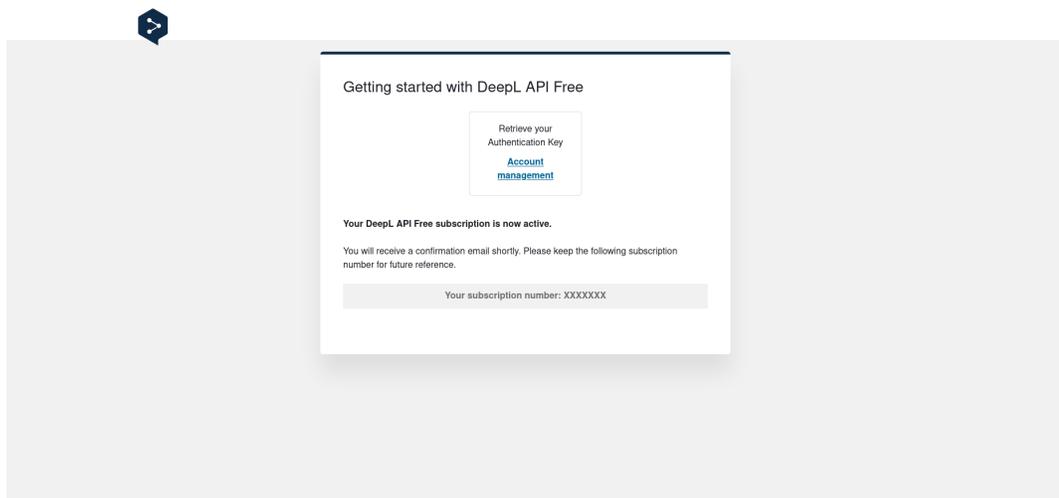

4. Enter your personal informations

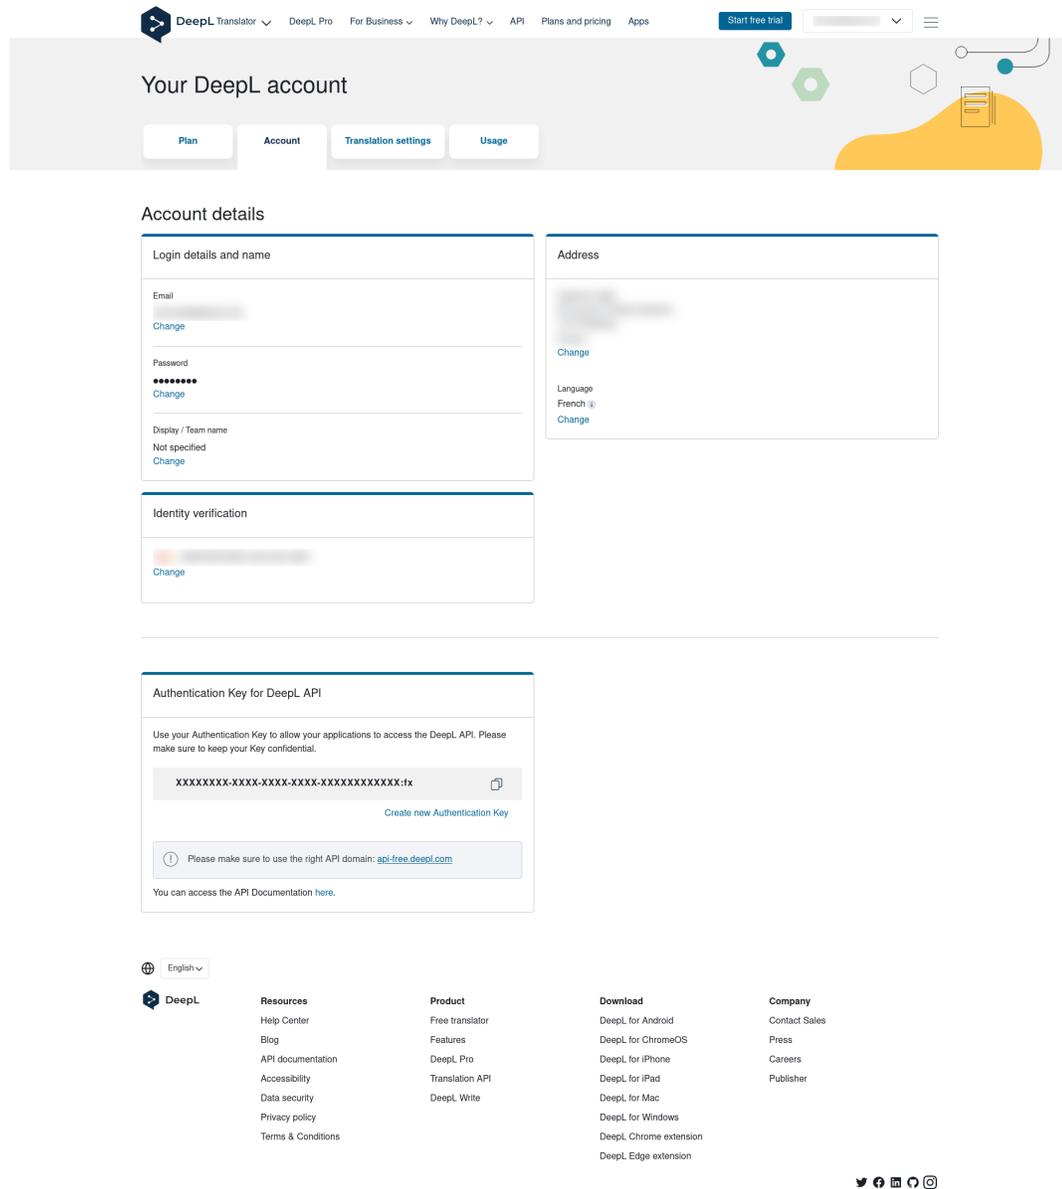

5. Accept the terms of use and complete the registration

6. Click on «Account management» to retrieve your API key

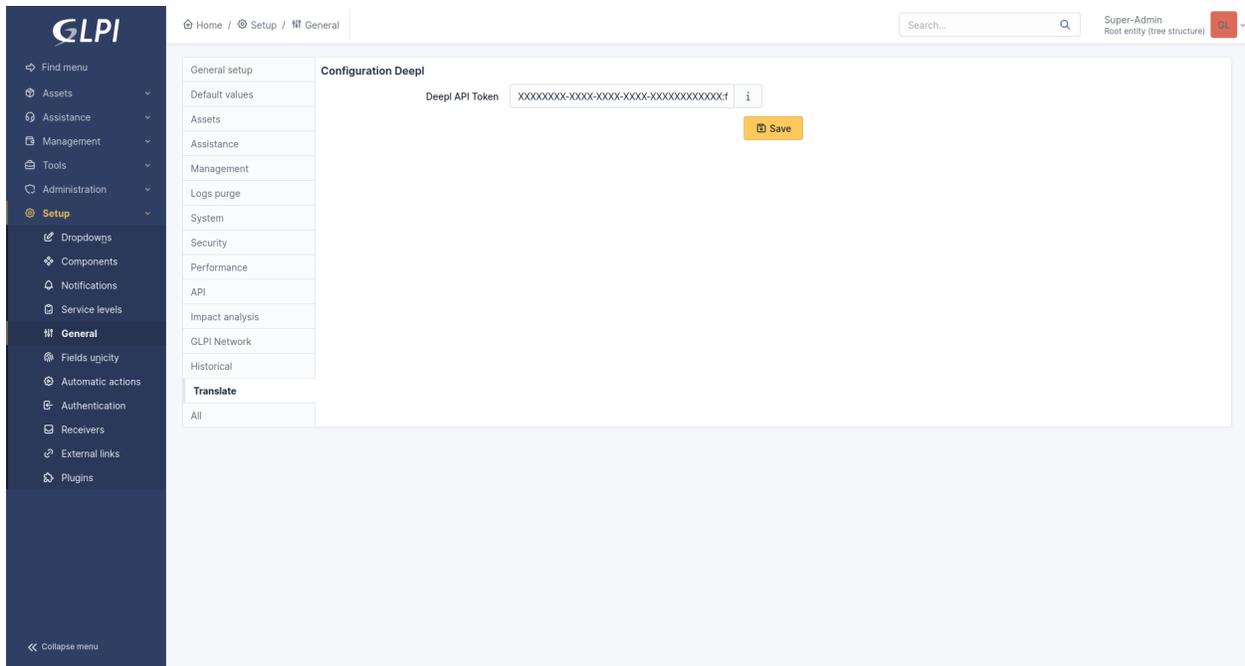

7. In the «Account» tab, retrieve your API key at the bottom of the page, in the «Authentication Key for DeepL API» section

## 33.7 Configuration

### 33.7.1 Initial Configuration

After installing the plugin, it is necessary to enter a DeepL API key.

### 33.7.2 Consumption Configuration

Some configuration options are only available if the API key is linked to the paid plan.

#### Usage

This progress bar allows you to monitor character consumption at the API level.

#### Allow Exceeding Limit

Allows setting or not setting a monthly limit on character consumption.

> This option is limited to the paid DeepL API plan.

#### Usage Limit

Allows setting the type of limitation:

- Characters: Limits usage to the number of characters
- Cost: Limits usage to cost

This option is limited to the paid DeepL API plan.

#### Per Characters / Per Cost

Allows setting the consumption limit corresponding to the type defined above.

For usage limited by cost, monthly subscription fees are not included.

This option is limited to the paid DeepL API plan.

### Maximum Number of Characters Translated per Translation

Allows setting a maximum number of characters translated at once. This configuration is important and filters out overly large and resource-consuming elements for the API.

## 33.7.3 Notification Configuration

### Enable API Usage Notifications

Allows enabling API usage notifications. Once enabled, alert thresholds are configurable using the «Usage Threshold» fields. Default value: Yes

### Usage Threshold

This option allows setting usage alert thresholds. Requires enabling the «Enable API Usage Notifications» option. Default values: 25%, 50%, 75%, 100%

## 33.7.4 User Configuration

### Allowed Target Languages for All Users

Defines the languages in which elements can be translated by all users.  
Default values: Languages proposed by DeepL

### Allowed Translatable Elements for All Users

Defines the elements that can be translated by all users.  
Default values: Ticket, Follow-up, Ticket Task, Solution, Validation Request

## 33.8 Rights

### 33.8.1 Allow translation of displayed elements (language configured in preferences)

This right defines whether a profile can translate timeline elements of a ticket (Ticket, Follow-up, Task, Solution, Validation Request).

### 33.8.2 Allow translation while writing

This right defines whether a profile can translate the content of a follow-up before sending.

## 33.9 FAQ

If you have any questions about using the plugin, please consult [our FAQ](#)

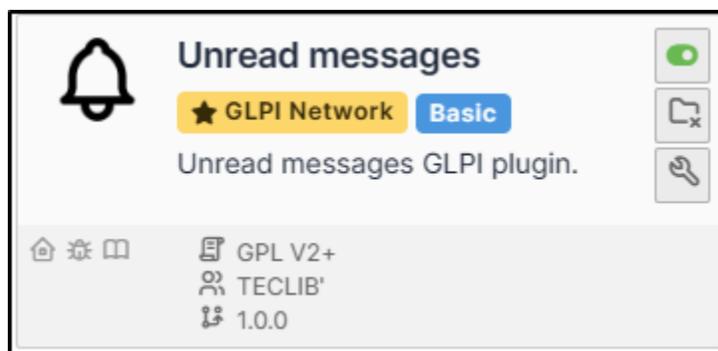

## 34.1 Requirements (on-premise)

GLPI Version	Minimum PHP	Recommended
10.0.x	8.1	8.2

**Примечание:** A [basic licence](#) (or higher) is required. This plugin is also available on [Cloud](#).

## 34.2 Install the plugin

- Go to the marketplace. Download and install the plugin **Unread messages**.

## 34.3 Setting up the plugin

- Go to **Administration** > **Entities, unread messages** tab

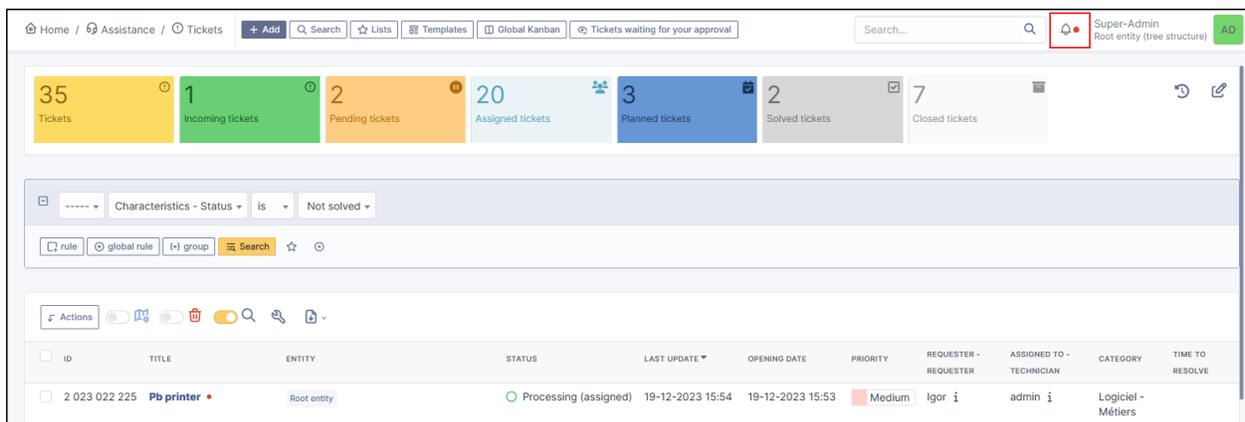

There are 3 possible settings:

Operation	Effect
<b>Disabled</b>	The plugin will remain inactive
<b>Per user helpdesk;share central</b>	Users with the self-service profile will be notified of tickets for which they are the requestor. Technicians, for their part, will share the notifications. If a notification is read, it will be marked as read for all other technicians
<b>Per user</b>	Each user will have access to their own queue of notifications, including those for their group and their individual assignments

## 34.4 Display notifications

### 34.4.1 Header

When a new activity has not yet been viewed, a **bell icon** appears:

### 34.4.2 Listed

Unread messages on a ticket highlight the ticket concerned and a red indicator :

### 34.4.3 Ticket timeline

New messages will be identified by a banner **New messages**.

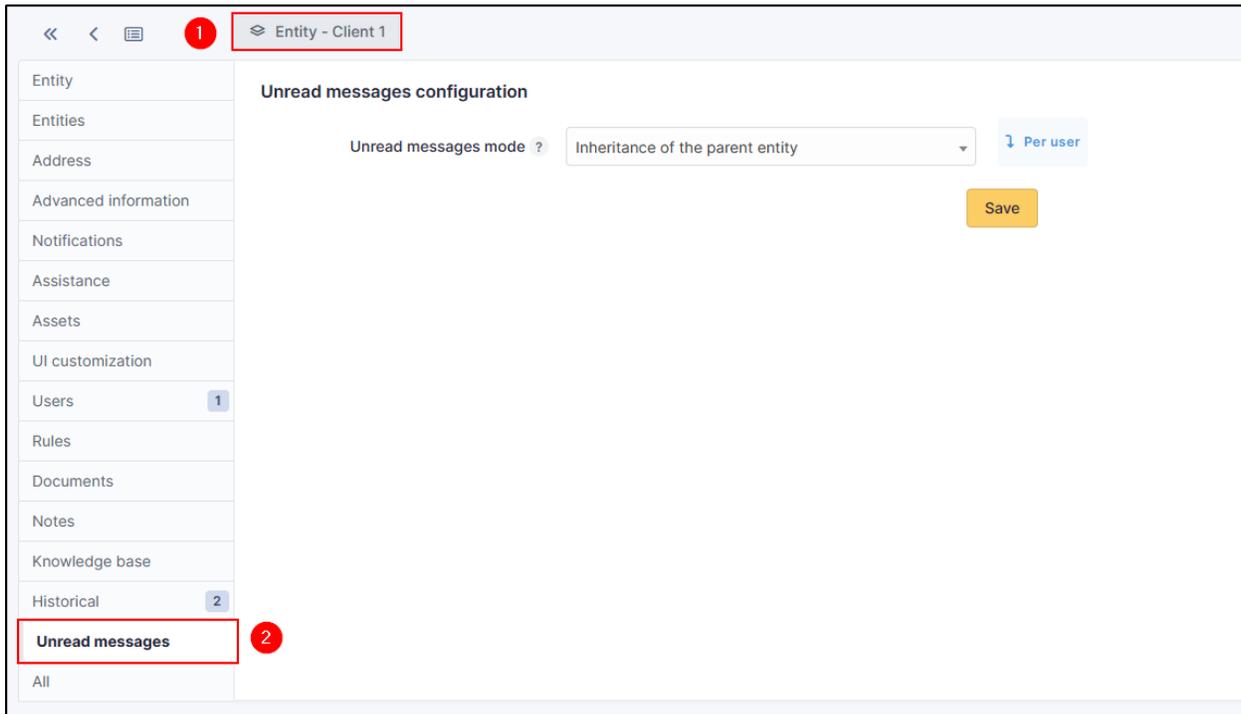

The screenshot shows the GLPI Tickets dashboard. At the top, there are navigation links and a search bar. Below that, a summary bar displays ticket counts: 35 Tickets, 1 Incoming tickets, 2 Pending tickets, 20 Assigned tickets, 3 Planned tickets, 2 Solved tickets, and 7 Closed tickets. A filter bar shows 'Characteristics - Status is Not solved'. Below the filter, there are action buttons and a table of tickets. The table has columns: ID, TITLE, ENTITY, STATUS, LAST UPDATE, OPENING DATE, PRIORITY, REQUESTER, ASSIGNED TO, CATEGORY, and TIME TO RESOLVE. The first row is highlighted with a red box: ID: 2023 022 225, TITLE: Pb printer, ENTITY: Root entity, STATUS: Processing (assigned), LAST UPDATE: 19-12-2023 15:54, OPENING DATE: 19-12-2023 15:53, PRIORITY: Medium, REQUESTER: Igor, ASSIGNED TO: admin, CATEGORY: Logiciel - Métiers.

The screenshot shows the details of a ticket titled 'Pb printer (2023022225)'. On the left, there is a sidebar with navigation options like Statistics, Approvals, Knowledge base, etc. The main content area shows a message history. The top message is from 'AD' (admin) created 12 minutes ago, with the text: 'Hello, The printer in my office no longer works. An error message is displayed (ERR\_01) Thanks for you help Best regards'. Below it, there is a 'NEW MESSAGES' notification box highlighted with a red box. The bottom message is from 'IG' (Igor) created 11 minutes ago, with the text: 'a reboot changed nothing'. On the right, there is a 'Ticket' details panel with fields for Entity, Opening date, Type, Category, Status, Request source, Urgency, Impact, Priority, Location, and Approval. Below that, there is an 'Actors' section showing the Requester as 'Igor'.

### 34.4.4 Management by entity

Management by entity is possible to manage the counting of notifications by entity.

- Go to **Administration** > **Entities**, and select the desired entity.
- In the **Unread messages** tab, select the option that suits you so that unread messages behave differently to the parent entity.

## 34.5 FAQ
